Introduction	ix
About this series. How to read this book. What isn't included. Computers and people.	
Acknowledgments	xvii
1. Automata Theory	1
What is a computation? Finite-state machines. Nondeterministic machines. Representing machines as Logo lists. Text editors: a use for acceptors. Regular expressions. Rules that aren't regular. Regular expressions and finite-state machines. How to translate. A finite-state adder. Counting and finite-state machines. Turing machines. Turing's thesis. The halting theorem. Proving the halting theorem in Logo. Program listing.	
2. Discrete Mathematics	43
Propositional logic. An inference system. Data structure. Program structure. Generalized inference systems and predicate logic. Logic and computer hardware. Combinatorics. Inductive and closed-form definition. Pascal's triangle. Simulation. The Simplex lock problem. An inductive solution. Multinomial coefficients. Program listing.	

3. Algorithms and Data Structures	95
<p>Levels of efficiency. Memoization. Sorting algorithms. Sorting by selection. Sorting by partition. $O(n^2)$ and $O(n \log n)$ sorting algorithms. Data structures. Data structures in real life. Trees. Improving the data representation. Data abstraction. Tree modification. Searching algorithms and trees. Logo's underlying data structures. Implementing Logo arrays. Representing a deck of cards. Program listing.</p>	
4. Programming Language Design	153
<p>Interactive and non-interactive languages. Block structure. Statement types. Shuffling a deck using arrays. Lexical scope. Typed variables. Additional types in standard Pascal. Critique of typed variables. Procedures and functions. Call by value and call by reference. Parameters in Logo: call by binding.</p>	
5. Programming Language Implementation	191
<p>Formal syntax definition. Tokenization. Lookahead. Parsing. Data structures. Code generation. Generated code for variable references. Expressions and precedence. The two-stack algorithm for expressions. The runtime library. Program listing.</p>	
6. Artificial Intelligence	253
<p>Microworlds: STUDENT. How STUDENT translates English to algebra. Pattern matching. Solving the equations. Age problems. AI and education. Combining sentences into one equation. Allowing flexible phrasing. Using background knowledge. Optional substitutions. If all else fails. Limitations of pattern matching. Context-free languages. Augmented transition networks. Program Listing.</p>	
Appendix A. The Program Diskette	323

Appendix B. Programming Tools 331

 WHILE; UNTIL; DO . WHILE; DO . UNTIL; FOR; FOREACH; MAP; MAP . SE;
 CROSSMAP; FIND; FILTER; REMDUP; REMOVE; REDUCE; CASCADE;
 TRANSFER; CASCADE . 2; REVERSE; PICK; GENSYM; PUSH; POP; QUEUE;
 DEQUEUE; IGNORE.

Appendix C. Bibliography 351
