Foreword of the Editors . . . . .	XXIII
Acknowledgements . . . . .	XXV
<b>Part I</b>	
<b>Inorganic Contaminants . . . . .</b>	<b>1</b>
<b>1 Mobilization of Nickel, Cobalt and Arsenic in a Multi-aquifer Formation of the Lower Rhine Valley: Identification and Modeling of the Processes Controlling Metal Mobility . . . . .</b>	<b>3</b>
<i>Nils Cremer, Peter Obermann, and Frank Wisotzky</i>	
1.1 Introduction . . . . .	4
1.2 Site, Materials, and Methods . . . . .	5
1.3 Results and Discussion . . . . .	8
<b>2 Experimental and Theoretical Investigations of Oxygen Release by a Trapped Gas Phase . . . . .</b>	<b>19</b>
<i>Helmut Geistlinger, Detlef Lazik, Annika Beckmann, Danny Eisermann, Gunnar Krauss, and K. Ulrich Mayer</i>	
2.1 Introduction . . . . .	20
2.2 Theory . . . . .	22
2.2.1 Thermodynamic Characteristics of Mixed Gas Phases . . . . .	22
2.2.2 Kinetic Models for Mass Transfer between a Gas and Water Phase . . . . .	23
2.2.2.1 Variable Volume Model . . . . .	23
2.2.2.2 Constant Volume Model . . . . .	23
2.2.2.3 Conceptual Model for Mass Transfer . . . . .	24
2.2.2.4 Mixed Gas Phases . . . . .	26
2.3 Column Experiments on Mass Transfer of a One-Component Gas (Oxygen) . . . . .	27
2.3.1 Experimental Set-up . . . . .	27
2.3.2 Results and Parameter Identification . . . . .	28
2.4 Modelling of a Reactive Oxygen Bubble Wall . . . . .	30

2.4.1	1D-Problem of a Pure Oxwall . . . . .	30
2.4.2	2D-Simulation of a Reactive Oxygen Wall . . . . .	32
2.5	Conclusions . . . . .	34
<b>3</b>	<b>The Application of Stable Isotopes to the Determination of the Origin of Sulfate in the Drinking Water Catchment Area of Torgau-Mockritz (Germany) . . . . .</b>	<b>37</b>
	<i>Kay Knöller, Rolf Trettin, and Peter Kowski</i>	
3.1	Introduction . . . . .	38
3.2	Regional Setting . . . . .	39
3.3	Sampling and Analytical Methods . . . . .	40
3.4	Results and Discussion . . . . .	41
3.4.1	Isotopic Composition of Possible Sulfate Sources . . . . .	41
3.4.1.1	Soil Sulfur . . . . .	41
3.4.1.2	Inorganic Fertilizers . . . . .	42
3.4.1.3	Atmospheric Deposition . . . . .	43
3.4.1.4	Further Sulfate Sources . . . . .	43
3.4.2	Isotopic Composition of Dissolved Sulfate in Groundwater . . . . .	43
3.4.3	Regional Distribution of $\delta^{34}\text{S}$ . . . . .	46
3.5	Summary and Conclusions . . . . .	48
<b>4</b>	<b>Groundwater Leakage Through a Confining Unit Beneath a Municipal Well Field, Memphis, Tennessee, USA . . . . .</b>	<b>51</b>
	<i>Daniel Larsen, Randall W. Gentry, Stephanie Ivey, Douglas K. Solomon, and James Harris</i>	
4.1	Introduction . . . . .	52
4.2	Hydrogeology and Background . . . . .	54
4.3	Methods . . . . .	55
4.4	Results . . . . .	56
4.4.1	Evidence for Leakage and Hydrologic Pathways of Leakage . . . . .	59
4.4.2	Modeling of Mixing between Shallow Aquifer and Deep Memphis Aquifer Waters . . . . .	61
4.4.3	Implications for Future Water Development . . . . .	62
4.5	Conclusions . . . . .	63
<b>5</b>	<b>Iron-Cyanide Complexes in Soil and Groundwater . . . . .</b>	<b>65</b>
	<i>Tim Mansfeldt and Thilo Rennert</i>	
5.1	Introduction . . . . .	66
5.2	Properties of Iron-Cyanide Complexes and their Environmental Hazard . . . . .	66
5.3	Iron-Cyanide Complex Contaminated Sites . . . . .	68
5.4	Behavior of Iron-Cyanide Complexes in Soil and Groundwater . . . . .	70

5.5	Future Research . . . . .	74
<b>6</b>	<b>A FTIR Spectroscopical Study to Explain Bonding Structures of Arsenate and Chromate Associated with Schwertmannite . . . .</b>	<b>78</b>
	<i>Simona Regenspurg and Stefan Peiffer</i>	
6.1	Introduction . . . . .	79
6.1.1	Vibration Spectroscopy of Schwertmannite and Sulfate . . . . .	79
6.2	Material and Methods . . . . .	81
6.2.1	Sample Preparation . . . . .	81
6.2.2	IR Spectroscopic Measurement . . . . .	82
6.3	Results . . . . .	83
6.3.1	Powder X-ray Diffraction . . . . .	83
6.3.2	FTIR Spectra of Sulfated Samples . . . . .	84
6.3.3	FTIR Spectra of Chromated Samples . . . . .	84
6.3.4	FTIR Spectra of Arsenated Samples . . . . .	86
6.4	Discussion . . . . .	88
6.4.1	Sulfate Bound to Schwertmannite . . . . .	88
6.4.2	Chromate Bound to Schwertmannite . . . . .	89
6.4.3	Arsenate Bound to Schwertmannite . . . . .	90
6.5	Conclusions . . . . .	91
<b>7</b>	<b>Protection of the Groundwater Resources of Metropolis Cebu (Philippines) in Consideration of Saltwater Intrusion into the Coastal Aquifer . . . . .</b>	<b>93</b>
	<i>Olaf Scholze, Wilfried Schneider, and Gero Hillmer</i>	
7.1	Introduction . . . . .	93
7.2	Description of the Study Area . . . . .	94
7.3	Hydrogeological Description . . . . .	96
7.4	Seawater Intrusion . . . . .	98
7.5	Available Groundwater . . . . .	99
7.6	Fieldwork . . . . .	100
7.7	Research Project . . . . .	101
<b>8</b>	<b>Temporal Variability of Element Concentrations and Fluxes in a Strongly Acidified Cambic Arenosol . . . . .</b>	<b>104</b>
	<i>Holger Wetzels, Claus-G. Schimming, and Rainer Horn</i>	
8.1	Introduction . . . . .	105
8.2	Materials and Methods . . . . .	105
8.3	Results and Discussion . . . . .	106
8.3.1	Soil Properties . . . . .	106
8.3.2	Atmospheric Deposition . . . . .	108
8.3.3	Soil Solution . . . . .	108
8.4	Conclusion . . . . .	111

<b>Part II</b>		
<b>Organic Contaminants</b>		113
<b>9 Short Chained Alkyl Phenols (SCAP) in the Environment – Chemical Analysis and Field Studies</b>		115
	<i>Tobias W. Licha, Jürgen Dermietzel, and Martin Sauter</i>	
9.1	Short Chained Alkyl Phenols – SCAP	115
9.2	Sources of SCAP and Environmental Relevance	116
9.3	Current Understanding on SCAP in Groundwater	117
9.4	Previous Results on the Field of Phenol Analysis	118
9.5	Description of the New Method for the Analysis of Underivatised SCAP	120
9.5.1	Standards	120
9.5.2	Headspace-Solid Phase Micro Extraction (HS-SPME)	120
9.5.3	Microwave Assisted Extraction (MAE) of Solid Samples	120
9.5.4	Gas Chromatography – Mass Spectroscopy (GC-MS)	121
9.6	Transport Parameter	122
9.7	The Field Cases	123
9.7.1	Shallow Contamination from a Gas Works Site in an Unconsolidated Alluvial Valley Fill	124
9.7.2	Deep Injection of Carbonisation Plant Waters in Karstified Carbonate Groundwater Systems	126
9.8	Summary and Outlook	128
<b>10 Concept and First Results of Studying Natural Attenuation at a Site in Northern Bavaria Contaminated with Chlorinated Ethenes</b>		131
	<i>Silke Marczinek and Stefan Peiffer</i>	
10.1	Introduction	131
10.2	Geological and Hydrogeological Settings	131
10.3	Degradation of Chlorinated Ethenes	134
10.4	The Geochemical Research Approach	135
10.5	Outlook	136
<b>11 Effects of Interspecies Competition on the Design of Permeable Reactive Iron Barriers</b>		138
	<i>Dirk Schäfer, Ralf Köber, Markus Ebert, and Andreas Dahmke</i>	
11.1	Introduction	139
11.2	Experimental Set Up	140
11.3	Numerical Model	142
11.4	Discussion	144
11.5	Relevance for Reactive Barrier Design	147

<b>12 Influence of Colloids and Suspended Particles on PAH-Transport in Groundwater</b> . . . . .	149
<i>Ulrich Schulte-Ebbert and Uwe Schöttler</i>	
12.1 Introduction . . . . .	149
12.2 Methods . . . . .	150
12.2.1 Groundwater Sampling . . . . .	150
12.2.2 PAH-Sample-Handling and -Analysis . . . . .	151
12.3 Results and Discussion . . . . .	152
12.3.1 PAH in Natural Groundwater Systems . . . . .	152
12.3.1.1 Fate of PAH during Bank Filtration . . . . .	152
12.3.1.2 Mobilisation of Particle/Colloid-bound PAH . . . . .	154
12.3.2 Transport of PAH in Laboratory and Technical Scale Experiments . . . . .	156
12.3.2.1 Column Experiments . . . . .	156
12.3.2.2 Flow Channel Experiments . . . . .	158
12.3.3 Modelling of PAH-Transport Phenomena . . . . .	159
12.3.3.1 Modelling the Role of Mobile Particles/Colloids . . . . .	159
12.3.3.2 Multi-retardation-approach . . . . .	161
12.4 Conclusions . . . . .	165
<b>13 Combined <math>\delta^{13}\text{C}</math> and <math>\delta^2\text{H}</math> Monitoring of in situ Biodegradation of Aromatic Hydrocarbons in a Contaminated Aquifer</b> . . . . .	169
<i>Alfred Steinbach and Walter Michaelis</i>	
13.1 Introduction . . . . .	169
13.2 Method . . . . .	170
13.2.1 Test Site . . . . .	170
13.2.2 Sampling Methods . . . . .	172
13.2.3 Compound Specific Isotope Analysis . . . . .	172
13.3 Results . . . . .	173
13.3.1 Carbon Isotopes . . . . .	173
13.3.2 Hydrogen Isotopes . . . . .	175
13.4 Discussion . . . . .	176
13.5 Conclusions . . . . .	180
<b>14 Fate of PAH at Contaminated Sites:</b>	
<b>Facts and Concepts for the Unsaturated Soil Zone</b> . . . . .	182
<i>Kai Uwe Totsche, Ingrid Kögel-Knabner, Harald Weigand, Bettina Haas, and Dirk Hensel</i>	
14.1 Introduction . . . . .	182
14.2 Spatial Variability of the Unsaturated Zone at Anthropogenic Sites: The "Testfeld Süd" . . . . .	183
14.3 Ageing of NAPL: Chemical Alterations of NAPL Phase as Revealed from $^{13}\text{C}$ CPMAS Spectrometry . . . . .	186

14.4	Release of PAH from Soil Contaminated with Unaltered Bulk NAPL Phase . . . . .	189
14.5	Colloidal/Particulate Transport of PAH at the Field Site: Role of the Natural Rain Events and Flow Regime . . . . .	191
14.5.1	Effect on the Export of PAH . . . . .	193
14.6	Conclusion: Conceptual Model for the Fate of PAH and NAPL in the Unsaturated Soil Zone at Contaminated Sites . . . . .	196
<b>15</b>	<b>Natural Attenuation of Volatile Organic Compounds Related to Volatilisation . . . . .</b>	<b>200</b>
	<i>Karolin Weber, Heinz Hötzl, Barbara Reichert, and Matthias Eiswirth</i>	
15.1	Introduction . . . . .	200
15.2	Field Investigations . . . . .	201
15.3	Laboratory Investigations . . . . .	203
15.4	Numerical Modelling . . . . .	206
15.5	Summary and Conclusions . . . . .	208
<b>16</b>	<b>Assessment of Enhanced Natural Attenuation Processes in a BTEX-contaminated Aquifer: Field and Column Experiments and its Modeling . . . . .</b>	<b>210</b>
	<i>Frank Wisotzky and Paul Eckert</i>	
16.1	Introduction . . . . .	211
16.1.1	Site Description . . . . .	211
16.1.2	Assessment of Natural Attenuation Processes without Active Remediation . . . . .	212
16.1.3	Investigations on the Efficiency of the Enhanced Natural Attenuation Process by Addition of Nitrate . . . . .	215
16.2	Methods . . . . .	216
16.2.1	Column Experiment . . . . .	216
16.2.2	Field Experiment . . . . .	217
16.3	Results and Discussion . . . . .	217
16.3.1	Column Experiment . . . . .	217
16.3.2	Field Tests . . . . .	218
16.4	Summary . . . . .	221
<b>17</b>	<b>Analysis and Occurrence of Nitrogen-Heterocyclic and Polyaromatic Compounds and their Transformation Products in the Subsurface at a Contaminated Site . . . . .</b>	<b>224</b>
	<i>Christian Zwiener, Gerd Ohlenbusch, and Fritz H. Frimmel</i>	
17.1	Introduction . . . . .	224
17.2	Experimental . . . . .	226
17.3	Results and Discussion . . . . .	228
17.4	Conclusions . . . . .	235

<b>Part III</b>	
<b>Water in Mining Areas</b> . . . . .	239
<b>18 Deposition of Organic Matter and Schwertmannite Controls</b>	
<b>Neutralization Rates in Sediments of Acidic Mine Lakes</b> . . . . .	241
<i>Christian Blodau and Stefan Peiffer</i>	
18.1 Neutralization Processes . . . . .	242
18.2 Acidic Mine Lake Sites and Geochemical Background . . . . .	243
18.3 The Importance of Aquatic Organic Carbon for Carbon Flow into Sulfate and Iron Reduction . . . . .	246
18.4 The Importance of Schwertmannite for Rates of Iron and Sulfate Reduction . . . . .	248
18.5 The Importance of Schwertmannite for Long Term Neutralization Rates . . . . .	251
18.6 Conclusions . . . . .	254
18.7 Methods . . . . .	254
<b>19 Mobilisation of Arsenic from Tin Mill Tailings</b> . . . . .	258
<i>Birgit Daus, Jürgen Mattusch, Rainer Wennrich, Peter Morgenstern, Uwe Fankhänel, and Holger Weiss</i>	
19.1 Introduction . . . . .	259
19.2 Methods . . . . .	260
19.2.1 Sampling . . . . .	260
19.2.2 Analysis . . . . .	260
19.2.3 Sequential Extraction of Tailings Material . . . . .	261
19.2.4 Sequential Extraction of the Precipitate Samples . . . . .	261
19.2.5 Kinetic Experiments . . . . .	261
19.3 Results . . . . .	262
19.3.1 Tailings Material . . . . .	262
19.3.2 Seepage Water . . . . .	263
19.3.3 Precipitate . . . . .	267
19.4 Discussion and Conclusions . . . . .	268
<b>20 Pyrite Weathering in the Unsaturated Zone of Lignite Mine Tailings: Release of As, Cd, Ni and Pb in a Soil Column Experiment</b> . . . . .	272
<i>Henrik Hecht, Martin Kölling, and Horst D. Schulz</i>	
20.1 Introduction . . . . .	273
20.2 Methods and Materials . . . . .	274
20.3 Results . . . . .	277
20.4 Discussion . . . . .	277
20.5 Conclusions . . . . .	284

<b>21</b>	<b>Sources, Migration Forms and Sinks of Trace Elements in Drainage and Pore Waters from Waste Rock Dumps of Former Lignite Mines (Germany)</b>	<b>287</b>

<b>Upscaling of Processes . . . . .</b>	<b>483</b>
<b>33 Biogeochemistry of a Deep Aquifer-System I: Hydrogeochemistry . . . . .</b>	<b>485</b>
<i>Axel Bergmann, Frank Wisotzky, and Peter Obermann</i>	
33.1 Introduction . . . . .	486
33.2 Methods . . . . .	487
33.3 Geological Situation . . . . .	488
33.4 Geochemistry . . . . .	489
33.5 Hydrochemistry . . . . .	491
33.5.1 Calculation of Saturation Indices and an $E_H$ -pH-Diagram . . . . .	493
<b>34 Biogeochemistry of a Deep Aquifer-System II: Stable Isotopes . . . . .</b>	<b>498</b>
<i>Ulrike Schulte and Harald Strauss</i>	
34.1 Introduction . . . . .	498
34.2 Materials and Methods . . . . .	499
34.2.1 Sampling . . . . .	499
34.2.2 Analytical Methods . . . . .	499
34.3 Results and Discussion . . . . .	500
34.3.1 Dissolved Sulfate and Hydrogen Sulfide . . . . .	500
34.3.2 Dissolved Inorganic Carbon (DIC) and Methane . . . . .	506
<b>35 Biogeochemistry of a Deep Aquifer System III: Microbiology . . . . .</b>	<b>511</b>
<i>Jan Kuever and Jan Detmers</i>	
35.1 Introduction . . . . .	511
35.2 Materials and Methods . . . . .	512
35.2.1 Study Site and Sampling Procedures . . . . .	512
35.2.2 Microbiological Methods . . . . .	512
35.2.3 Molecular Methods . . . . .	513
35.2.4 Phylogenetic Analysis . . . . .	514
35.3 Results . . . . .	515
35.3.1 Microbial Diversity Analyzed by Cultivation Based Methods . . . . .	515
35.3.2 Microbial Activity . . . . .	515
35.3.3 Microbial Diversity Analyzed by Molecular Methods . . . . .	516
35.4 Discussions . . . . .	516
35.4.1 Microbial Diversity . . . . .	516
35.4.2 Lignite as Electron Donor . . . . .	519

<b>36</b>	<b>Degradation of Microcystins: Scaling up from Test-Tube to Natural Conditions</b> . . . . .	524
	<i>Gabriele Böttcher, Gesche Grützmacher, and Ingrid Chorus</i>	
36.1	Introduction . . . . .	525
36.2	Materials and Methods . . . . .	526
36.3	Results and Conclusions . . . . .	528
36.3.1	Batch Experiments . . . . .	528
36.3.2	Column Experiments . . . . .	530
36.3.3	Slow Sand Filtration . . . . .	532
36.3.4	Bank Filtration Site . . . . .	533
36.3.5	Comparison of Scales of Observation . . . . .	534
36.4	Summary and Outlook . . . . .	536
<b>37</b>	<b>Fundamentals of Spatial Resolved Transport Studies in Soil Columns by Positron Emission Tomography</b> . . . . .	539
	<i>Michael Richter, Marion Gründig, Klaus Zieger, and Anita Seese</i>	
37.1	Introduction . . . . .	540
37.2	Methods for Nondestructive Spatial Resolved Measurements of Mass Transport . . . . .	540
37.3	Experimental Fundamentals of Geoscientific PET Measurements . . . . .	541
37.4	Calculation of the Spatial Flow Velocity Distribution . . . . .	545
37.5	Proposals for the Modelling of Hydrodynamics in Soil Columns on Basis of PET Measurements . . . . .	546
37.5.1	Partition of the Column in Regions with Different Flow Characteristics . . . . .	546
37.5.2	Modelling with Reference to the Dispersion Model . . . . .	548
37.5.3	Partition of the Column Volume into Elementary Cells . . . . .	548
37.6	Conclusions . . . . .	548
<b>38</b>	<b>Positron Emission Tomography (PET) for Investigation of Water Flow in Soil Columns</b> . . . . .	550
	<i>Marion Gründig, Michael Richter, and Anita Seese</i>	
38.1	Introduction . . . . .	550
38.2	Experimental . . . . .	551
38.3	Results . . . . .	552
38.3.1	Model Soil Column . . . . .	552
38.3.2	Undisturbed Drill Core . . . . .	555
38.4	Conclusion . . . . .	558

<b>39</b>	<b>Infiltration of River Water into the Groundwater – Quantifying 250 Years of Iron Reduction in an Anoxic Aquifer (Oderbruch, Germany)</b> . . . . .	560
	<i>Gudrun Massmann, Asaf Pekdeger, Christoph Merz, Joachim Quast, and Maria-Theresia Schafmeister</i>	
39.1	Introduction . . . . .	561
39.1.1	Characteristics of the Oderbruch Field Site . . . . .	561
39.1.2	Modelling Transport and Reaction . . . . .	562
39.2	Methods . . . . .	564
39.2.1	Modelling Approach . . . . .	564
39.2.2	Model Prerequisites . . . . .	565
39.2.2.1	Instrumentation, Sampling and Analysis . . . . .	565
39.2.2.2	Hydrogeology and Hydraulic Model Basis . . . . .	566
39.2.3	Transport Model Assumptions . . . . .	567
39.2.4	Model Calibration . . . . .	568
39.3	Results and Discussion . . . . .	568
39.3.1	Temporal and Spatial Development of the Iron Concentrations . . . . .	568
39.3.2	Iron Turnover in 250 Years . . . . .	572
39.3.3	Model Validation . . . . .	573
39.3.3.1	Estimating the Iron Pool . . . . .	574
39.3.3.2	Estimating the Organic Carbon Pool . . . . .	575
39.3.4	Limitations of the Approach . . . . .	575
39.4	Discussion . . . . .	576
 <b>40</b>	 <b>Identification and Quantification of Hydrochemical Processes at the Contact Zone between Anoxic Groundwater and Surface Water in the Oderbruch Polder</b> . . . . .	 580
	<i>Christoph Merz, Peter Schuhmacher, Andreas Winkler, and Asaf Pekdeger</i>	
40.1	Introduction . . . . .	581
40.2	Material and Methods . . . . .	582
40.3	Results . . . . .	583
40.3.1	Nieschen Investigation Site . . . . .	583
40.3.2	Geochemical Modeling . . . . .	584
40.3.2.1	Exfiltration Phase ( <i>Nieschen</i> ) . . . . .	584
40.3.2.2	Drying up Phase . . . . .	586
40.3.2.3	Exfiltration Phase ( <i>Bahnbrücke</i> ) . . . . .	586
40.3.3	Water-Rock Interactions . . . . .	586
40.3.4	Local Balance Calculations . . . . .	588
40.3.5	GIS-based Regional Balance Calculations . . . . .	589
40.4	Discussion . . . . .	592

<b>41</b>	<b>Geochemical Processes in the Salt-Freshwater Transition Zone – Exchanger Reactions in a 2D-Sand-Tank Experiment</b>	<b>596</b>
	<i>Björn Panteleit, Winfried Kessels, and Horst D. Schulz</i>	
41.1	Introduction	597
41.1.1	Exchanger Reactions	597
41.1.2	Investigation Area	598
41.2	Methods	600
41.2.1	Hydraulic Simulation	600
41.2.2	Geochemical Sampling	601
41.2.3	Numerical Modeling	601
41.3	Results and Discussion	602
41.4	Conclusions and Outlook	608
