

<b>Contents</b>	<b>page</b>
<b>Schwerin, M.</b> Director of the Research Institute for the Biology of Farm Animals, Dummerstorf <i>Preface</i>	13
Invited talks	
<b>Druet, T., Fritz S., Malafosse A., Eggen A., Gautier M., Grohs C., Rossignol M.N., Boscher M.Y., Colleau J.J., Boichard D.</b> <i>Preliminary work for the use of linkage disequilibrium in French MAS program</i>	15
<b>Hernandez, J., Sorensen A. S.</b> <i>Fine gene mapping using population history</i>	17
<b>Lund, M.S., J. Vilkki , L. Andersson-Eklund, J.L. Williams, R.F. Veerkamp, A. Fernandez, H. Viinalass, A.M. Sabry, N. Schulman, N. Hastings, H.J. Eding</b> <i>Strategy and statistical methods in fine mapping QTL affecting clinical mastitis and somatic cell count.</i>	19
Contributed talks	
<b>Aulchenko, Y.</b> <i>Preliminary analysis of the Erasmus Rucphen Family Study</i>	21
<b>Baro, J. A.</b> <i>Ascribing marker-types in nonequilibrium populations using fuzzy neural networks</i>	23
<b>Bennewitz, J.</b> <i>Investigations on a large Granddaughter Design</i>	25
<b>Buitenhuis, B.</b> <i>Comparison of methods for QTL detection for body weight in pigs: single time point versus longitudinal analysis</i>	27
<b>Crepieux, S.</b> <i>QTL mapping in a wheat breeding population by an IBD-based method</i>	29
<b>Guiard, V.</b> <i>Calculation of the q-Values for a Two Stage Step-up Test Procedure that controls the False Discovery Rate</i>	31
<b>Jansen, H.</b> <i>Construction of linkage maps for outbreeding species based on haplotype reconstruction</i>	33

---

<b>Jansen, H.</b> <i>QTL analysis in pedigrees and related crosses of apple</i>	35
<b>Knol, E.F, van Wijk, R., Harlizius, B.</b> <i>Search for carcass and meat quality QTL in a commercial pig finishing cross</i>	37
<b>Labouriau, R.</b> <i>Locating and estimating the effects of a QTL by using mixtures of exponential dispersion models</i>	39
<b>Lebreton, C.</b> <i>Results from a QTL based MAS experiment in maize.</i>	41
<b>Liu, F.</b> <i>Effects of splitting of extended pedigrees on power of variance components QTL analysis</i>	43
<b>Mayer, M.</b> <i>Limitations of a moment method for mapping linked multiple QTL</i>	45
<b>Meuwissen, T.</b> <i>Bootstrapping of gene-expression data improves and controls the false discovery rate of differentially expressed genes</i>	47
<b>Pareek, Ch.</b> <i>Whole genome scan for milk production traits in Polish Black-and-White cattle using Selective DNA pooling.</i>	49
<b>Raadsma, H.</b> <i>Towards building a comprehensive QTL map for all production traits in sheep</i>	51
<b>Sillanpää, M.</b> <i>Bayesian association-based fine mapping in small chromosomal segments</i>	53
<b>Siwek, M.</b> <i>QTL for primary response to KLH: detection, conformation, fine mapping.</i>	55
<b>Teuscher, F.</b> <i>Recent Advantages in Modelling the Recombination Process</i>	57
<b>Thomsen, H.</b> <i>Implementation of MAS in the German dairy cattle population</i>	59

---

<b>Tuchscherer, A.</b> <i>Treatment of linear dependencies in the gametic relationship matrix and its inverse</i>	63
<b>van Berloo, R.</b> <i>Studies on associations in tomato between a number of different traits, which represent different levels in the tomato chain between genome and shop</i>	65
<b>Yu, X.</b> <i>Power of Arbitrary pedigree in QTL Mapping</i>	67
<b>List of Participants</b>	69
