

Contents

- 1 **Pipe material and water quality in a holistic view** T. Hedberg

Internal corrosion

- 11 **Drinking water distribution – Improvements of the surface complexation model for Iron corrosion** A. Elfström Broo, B. Berghult and T. Hedberg
- 19 **The influence of drinking water quality on the corrosion of stainless steel EN 1.4401 (SS 2347)** A. Elfström Broo, B. Berghult and T. Hedberg
- 25 **The role of pipe ageing in copper corrosion by-product release** M. Edwards, K. Powers, L. Hidmi and M.R. Schock
- 33 **State of the art in organic piping systems: alternative solutions for avoiding internal corrosion** S. Rigal and J. Baron

Microbiological activity

- 39 **Biomass production potential of materials in contact with drinking water: method and practical importance** D. van der Kooij and H.R. Veenendaal

Water treatment and corrosion control

- 47 **Corrosion control measures in Sweden and the effect of succession order** B. Berghult, A. Elfström Broo and T. Hedberg
- 59 **The effect of mineralization and silicate addition for corrosion control in soft low carbonate waters** S.W. Osterhus
- 75 **Copper corrosion control in the Netherlands** P.G.G. Slaats, H. Brink and T.J.J. van den Hoven

Pipe materials selection

- 83 **Metallic materials in Danish supply water systems** K. Nielsen
- 91 **Water treatment to reduce internal corrosion in the drinking water distribution system in Oslo** L.J. Hem, E.A. Vik and A. Bjørnson-Langen

External corrosion and structural design

- 97 **Water mains and distribution pipes in soil – external corrosion and protection methods** G. Camitz
- 107 **Structural design of pressure pipes** I. Björklund

Conference summary paper

- 117 **Pipe material selection in drinking water systems – a conference summary** A. Elfström Broo, B. Berghult and T. Hedberg
