Foreword	5
Vorwort	7
The project “Risk Hazard Damage – specification of criteria to assess environmental impact of genetically modified organisms” by the Specialist Group on Gene Ecology	9
ARMIN BENZLER	
Effects of genetically modified organisms on biodiversity – a contribution from the viewpoint of nature conservation	13
Expectations and anticipations of GMO: Benefits with the potential to bring risk and harm?	23
WILFRIED WACKERNAGEL	
Environmental effects of a T4 lysozyme transgenic potato plant: Issues, analyses and conclusions	25
RENE C. VAN ACKER, ANITA L. BRULE-BABEL, LYLE F. FRIESEN	
Intraspecific gene movement can create environmental risk: The example of Roundup Ready* wheat in Western Canada	37
WALTER A. PENGUE	
Environmental and socio economic impacts of transgenic crops in Argentina and South America: An ecological economics approach.	49
CRESCENTIA FREUDLING	
The circumstances surrounding glyphosate resistant horseweed in more than nine US states	61
BRODER BRECKLING, GERTRUD MENZEL	
Self-organised pattern in oilseed rape distribution – An issue to be considered in risk analysis	73
Issues and views to be considered in risk evaluation and estimation.	89
E. ANN CLARK	
GM crops are not containable.	91
MIKE WILKINSON	
Predicting the consequences of gene flow on a national scale	109
MICHELLE A. MARVIER	
Risk assessment of GM crops warrants higher rigor and reduced risk tolerance than traditional agrichemicals.	119

ANGELIKA HILBECK, KRISTEN NELSON, DAVID A. ANDOW, EVELYN UNDERWOOD An scientist's use of Problem Formulation and Options Assessment (PFOA) in risk assessment of GM crops	131
HORST BACKHAUS Conceptualizing modified organisms as sources of hazards and risk – Visions of science and regulation	145
DANIEL AMMANN A model for defining biological damage thresholds	163
BARBARA SKORUPINSKI Debating risks and hazards – About deliberation and deliberate release. . . .	171
Surveying the consequences: Legal aspects and monitoring	183
HELMUT GAUGITSCH Environmental risk/safety assessment of GMOs – methods and criteria	185
WIEBKE ZÜGHART, ANNETTE DOERPINGHAUS The fate of transgenes in the environment – A key area in the monitoring of genetically modified organisms (GMOs).	195
FRIEDER GRAEF, BERND HOMMEL, WIEBKE ZÜGHART, ULRICH STACHOW Determining GM crop monitoring scope, potential hazards and variables – A precondition for a spatial monitoring design on the landscape level. . . .	205
ANDREAS FISAHN The concept of “Adverse Effects on the Environment” and the regulation of genetically modified organisms	215
Concluding views and perspectives	227
BRIAN JOHNSON Changing cropping systems is an important issue for GM crops	229
DAVID QUIST Transgene ecology: An ecological perspective for GMO risk assessment	239
THOMAS POTTHAST Conceptual, epistemological, and ethical perspectives on “Ecological Damage” with regard to genetically modified organisms . . .	245
