Contents

Preface xii

1. What is language? What is psycholinguistics? 1

Introduction 1
The origin of language 5
Animal language? 7
Animal communication systems 7
Defining language 8
Teaching language to apes (and other animals) 10
The history and methods of psycholinguistics 19
A brief history of psycholinguistics 19
The "cognitive science" approach 21
Cognitive neuropsychology 24
Concluding summary 28
Further reading 28

2. The speech system and spoken word recognition 31

Introduction 31
The anatomy of speech and representing sounds 33

Consonants 38
Vowels 39
Further phonetic considerations 40
Higher level structure 40
Speech perception 41
Preliminary findings and problems in speech perception 41
The role of context in speech recognition 48
Models of speech perception 50
Spoken word recognition 52
The stages of spoken word recognition 52
Context effects in speech recognition 53
TRACE 56
The cohort model of word recognition 58
Comparison of models of speech recognition 63
The neuropsychology of spoken word recognition 63
Concluding summary 64
Further reading 65

3. Visual word recognition 67

Introduction 67
Methods and findings 68
Preliminary findings 70
Attentional processes in visual word recognition 76
Differences between methodologies 80
Meaning-based facilitation of visual word recognition 83
Types of semantic priming 83
Sentence context effects in visual word recognition 85
Summary of meaning-based priming studies 87
Models of word recognition 87
Forster's autonomous serial search model 88
The logogen model 90
Interactive activation models 94
Other models 97
Comparison of models 98
Concluding summary 98
Further reading 100

4. Word pronunciation and dyslexia 101

Introduction 101
A preliminary model of reading 102
The processes of normal reading 105
Nonword processing 105
Word processing 107
Evaluation of experiments on normal reading 111
The neuropsychology of reading disorders: Dyslexia 111
Surface dyslexia 112
Phonological dyslexia 113
Deep dyslexia 114
Non-semantic reading 116
Summary of the interpretation of the dyslexias 117
Models of naming 118
The revised dual-route model 118
The analogy model 120
Connectionist models: Seidenberg and McClelland (1989) 121
Connectionist models of dyslexia 125
Comparison of models 130
Learning to read and spell 130
"Normal" reading development 131
Developmental dyslexia 133
Concluding summary 136
Further reading 136

5. Syntax and parsing 139

Introduction 139
Linguistic approaches to syntax 140
The linguistic theory of Chomsky 141
Phrase structure grammar 142
Other linguistic approaches to syntax 151
The formal power of grammars: Automata theory 151
Psycholinguistic evaluation 153
Evaluation of linguistic approaches 156
Artificial Intelligence (AI) approaches to parsing 157
Augmented Transition Networks (ATNs) 157
Psycholinguistic approaches to parsing 160
What size are the units of parsing? 160

Surface structure strategies 161
Kimball's seven principles of surface structure parsing 162
Fodor and Frazier and the sausage machine 166
Recent advances in understanding parsing 169
Concluding summary 171
Further reading 173

6. Semantics 175

Introduction 175
Classical approaches 178
Semantic networks 179
The Collins and Quillian semantic network model 180
Semantic features 183
Early decompositional theories: Katz and Fodor 185
Feature list theories and semantic verification: Feature comparison 186
Evaluation of decompositional theories 187
Family resemblance and prototypes 193
New approaches to semantics 195
The neuropsychology of semantics 197
Category-specific semantic disorders 197
Modality-specific disorders 200
Access versus degradation 202
Dementia 203
Evaluation of the neuropsychology of semantic memory 203
Concluding summary 204
Further reading 204

7. Comprehension: Understanding and remembering the message 207

Introduction 207
What makes comprehension more difficult? 208
Memory for text and inferences 209
Importance 211
The effects of prior knowledge 212
Inferences 216

Anaphoric reference and ambiguity 220
Summary of work on memory, inferences, and anaphora 224
Models of text representation and processing 225
Propositional network models of representing text 225
Mental models approach 227
Schema-based theories 228
Story grammars 231
Kintsch's construction–integration model 233
Comparison of models 235
Pragmatics 236
Making inference in conversations 236
The structure of conversation 239
Concluding summary 240
Further reading 242

8. Speech production and aphasia 243

Introduction 243
Hesitation analysis 244
Pausing before individual words 245
Pauses and sentence planning 247
Evaluation of research upon pauses 249
Speech errors 250
Lexicalisation 253
How many stages are there in lexicalisation? 255
The time course of lexicalisation 256
The interactive activation model of lexicalisation 258
Syntactic planning 258
Evidence for Garrett's model of speech production 261
Evaluation of Garrett's model 263
Processes of syntactic planning in production 265
The cognitive neuropsychology of speech production: Aphasia 266
Broca's type aphasia 266
Wernicke's type aphasia 270
Anomia 272
Connectionist modelling of aphasia 273

Evaluation of the contribution of aphasia research to models of normal processing 274
Concluding summary 275
Further reading 276

9. The structure of the language system 279

Introduction 279
The structure of the language system 280
The lexicon 281
Differences between visual and spoken word recognition and comprehension 286
Are lexical derivations fully listed? 287
Interaction between systems 288
Lexical ambiguity 289
Syntactic ambiguity and garden path sentences 297
Concluding summary 307
Further reading 309

10. Language, thought, and the precursors of language 311

Introduction 311
The biological basis of language development 313
The critical period hypothesis 313
The driving force of language acquisition 319
Learning theory 320
Is language input degenerate? The role of child-directed speech 321
What might be innate in language? The language acquisition device 324
The cognition hypothesis: Cognitive precursors to language 331
The language development of deaf and blind children 332
Language development in children with learning difficulties 335
Evaluation of the cognition hypothesis 335
Social precursors to language 336
Language and thought: The primacy of language? 338
Interdependence of language and thought: Vygotsky 339

The Sapir-Whorf hypothesis 339
Language use and social processes 347
Concluding summary 348
Further reading 349

11. Language development 351

Introduction 351
Phonological development 352
Babbling 352
Later phonological development 354
Single word utterances 355
Semantic development 356
Semantic and conceptual development 357
Errors in early meaning 360
Evaluation of work on early semantic development 365
The later development of meaning 365
Does comprehension always precede production? 366
Early syntactic development 367
Two-word grammars 367
Semantic approaches to early syntactic development 369
The formation of syntactic categories 370
Later syntactic development 373
Bilingualism and second language learning 377
Bilingualism 377
Second language acquisition 379
Concluding summary 381
Further reading 383

12. New directions 385

Introduction 385
Themes: A reprise 386
Cognitive neuropsychology 388
Connectionism 388
Some growth areas 389
Language and the brain 390
Connectionism 391

Cognitive neuropsychology 392
Developmental 392
Integrative models 392
Cross-linguistic comparisons 393
Concluding summary 394
Further reading 395

Appendix: Connectionism 397

Introduction 397
Interactive activation models 398
Basic equations of the interactive activation model 399
Back-propagation 400
Further reading 402
