Preface .....	vi
<b>Section I. Development of speaking skills</b> .....	<b>1</b>
1. Development of articulatory, phonetic, and phonological capabilities .....	3
L. MENN	
I. Introduction .....	3
A. Background	
B. Plan of exposition	
II. The transition from babbling to speech .....	5
III. Constructing a model of early phonological knowledge .....	8
A. The input lexicon: representation of the adult word	
B. Segments, phones, and phonemic contrasts	
C. Strategies for dealing with words and sounds	
IV. Rule creation .....	21
A. Extending the notion of "ease of articulation"	
One key to a new theory	
B. "Natural processes"	
C. Non-natural rules	
D. Rule origin and growth	
E. Overgeneralization	
V. Towards a psychological model of phonological development .....	28
A. The theoretical importance of lexical exceptions and overgeneralizations	
B. Phonological idioms	
C. Canonical forms	
D. Motor programming: a psycholinguistic account of output constraints and canonical forms	
E. The articulatory program and the general model	
VI. Saying what one hears: task variables .....	36
A. Imitation, self-monitoring and spontaneous speech	
B. The word as means to an end	
VII. The acquisition of allophones and allomorphs .....	41
VIII. Summary and conclusion .....	43
2. Lexical and grammatical development .....	51
J. McSHANE and J. DOCKRELL	
I. Developmental considerations for a model of production .....	52

II. Lexical development .....	54
A. What develops in a lexicon?	
B. Overextension of names	
C. Production and comprehension of names	
D. "Nouns", "verbs", and other objects of wonder	
E. Input for lexical development	
III. Grammatical development .....	70
A. What develops in a grammar?	
B. Early studies of two-word combinations	
C. Semantic models of two-word combinations	
D. Beyond two-word combinations	
E. Inducing syntactic rules	
F. Input for grammatical development	
IV. Conclusion .....	90

**Section II. Production of language in non-speech modalities .....** 101

3. The organization of movement in handwriting and typing .....	103
P. VIVIANI and C. TERZUOLO	
I. Introduction .....	103
II. Biomechanical and control aspects .....	105
A. Handwriting	
B. Typing	
III. Linguistic factors in typing .....	124
A. Words are the basic units of motor action	
B. Evidence of higher order contextual imprints in the motor prosody	
IV. Conclusions .....	138
4. Lexical slips of the pen and tongue: what they tell us about language production .....	147
W. H. N. HOTOPF	
I. Introduction .....	147
II. Summary with elaborations of previous position .....	149
A. Description of the samples and types of slip at lexical level	
B. Categories of lexical slip	
C. Basis of distributional differences between slips in speech and writing	
D. Distributional differences between speech and writing at the phoneme/letter level	
III. Is input to writing at the lexical level exclusively phonological or not? .....	165
A. Procedure for identifying structural slips by phonemes or by letters	

IV. Causes of structural slips of the pen .....	169
A. How language is produced in speech and writing	
B. Slips in verbal thinking and in the phonological and graphological programs	
C. Deterioration in short-term memory	
D. Misspelling	
E. Access malapropisms	
F. Contextual causes of structural slips	
G. Misinterpreting visual feedback	
H. Summing up	

**Section III. Commonalities and differences between production and perception .....** 201

5. Perceptual equivalence and motor equivalence in speech .....	203
P. HOWELL and N. HARVEY	
I. Introduction .....	203
II. Problems of equivalence .....	204
A. Production of the same signal in different ways	
B. Articulators in the same position with the signal varying	
C. Variation in both articulator positioning and the signal	
III. Proposed solutions to problems of equivalence .....	209
A. Perception and production as independent processes	
B. Non-independence of perception and production	
IV. The state of play: summary and assessment .....	219
6. Aphasia: Information-processing in language production and reception .....	225
W. E. COOPER and E. B. ZURIF	
I. Introduction .....	225
II. Some clinical phenomena .....	226
III. Comprehension deficits and their relation to production deficits in Broca's aphasia .....	228
A. Parallels between comprehension and production	
B. Processing accounts of the grammatical limitation	
C. Relations between comprehension and production reconsidered	
IV. Comprehension deficits and their relation to production deficits in the fluent aphasias .....	233
A. Wernicke's aphasia	
B. Anomic aphasia	
V. Speech prosody in aphasia .....	238
VI. Broca's aphasia .....	241

VII. Wernicke's aphasia .....	246
VIII. Conclusion .....	250
7. Lexical representation .....	257
B. BUTTERWORTH	
I. Introduction .....	257
II. The full listing hypothesis .....	261
A. FLH: evidence from speech production	
B. FLH: evidence from speech perception	
C. FLH: evidence from reading	
III. Unit type .....	273
A. Unit type candidates	
B. Evidence from speech production	
C. Evidence from reading	
D. Evidence from writing	
E. Conclusions on unit type	
IV. Modality-specific lexical representations .....	280
A. Evidence from the comparison of modalities	
B. Modality-specific language breakdown	
V. Organization of lexical representations .....	286
A. Frequency organization	
B. Are content words and function words listed separately?	
C. Are compound forms listed under their bases?	
VI. Conclusions .....	289
AUTHOR INDEX .....	295
SUBJECT INDEX .....	303
