Contents

Preface xiii

1 Introduction 1

Science and the Ultimate Purpose of Astronomy 1
Astronomy and History 2
How the World Began 3

2 Historical Astronomy—Sky and No Telescopes 9

The Phases of the Moon and Eclipses 10
Time and the Calendar 17
The Seasons 19
Systematic Description of the Sky 19
The Age of Aquarius 21
Star Brightnesses—Real and Apparent 24
Original Tasks of the Astronomer 25
History of the World-View 27
Planetary Motions 27
The Heliocentric World-View 31
Publish or Perish 40
Newton and the Laws of Motion 41
The Earth's Motion—Some Observable Consequences 44

3 Our Planet Earth 47

Measuring the Earth 48
The Age of the Earth 51
The Geological Time Scale 55
Interior of the Earth 57
The Changing Surface of the Earth 64
Climatic Change on Earth and Mars 74

4 Evolution and Life—Terrestrial and Extraterrestrial 77

Darwin and Natural Selection 77
Mutation and Inheritance 80
The Origin of Life 85
The Flow of Evolution 88
Man on the Earth 92
Life on Other Worlds 97

5 Matter, Heat, and Light 101

History of Atomism 101
Particles in the Atom 104
Compounds, Gases, Liquids, and Solids 112
Heat, Temperature, and Energy 117
Conservation of Energy 121
Nuclear Energy 122
The Wave Nature of Light 123
Light as Particles 127
Elementary Spectroscopy 128
Radiation Laws 133
Doppler Effect 135
Velocity of Light 135

6 Telescopes and Observatories 139

The Human Eye 139
Cameras 140
The First Telescopes 141
Galileo, the Telescope, and the Scientific Method 141
Refracting and Reflecting Telescopes 143
Historical Telescopes 145
72-Inch Reflector in Ireland 147

Eighteenth-Century English Reflector 149
Major Telescopes Today 149
Radio Telescopes 156
Observatory Sites 159
Detection Methods 162
Photography 164
Photoelectric Detectors 167
Other Detectors 170
Sky Surveys 170
Continuing Efforts 176

7 The Solar System—An Overview **178**

Bode's Law 178
Herschel and Uranus 180
The Neptune Episode 180
The Search for Planet X 182
Asteroids 186
The Astronomical Unit 187
Comets 188
Meteors and Meteorites 198
Satellites 205
Scales and Regularities 209

8 The Planets and Their Atmospheres **211**

Interior and Exterior Planets 212
Radar Astronomy and Planetary Rotation 216
Planetary Temperatures 221
Evolution of the Earth's Atmosphere 224
Evaporation 224
Biological, Chemical, and Geological Effects 225
Evolutionary Summary 226
Characteristics of the Earth's Atmosphere 227
The Atmosphere of Venus 232
The Greenhouse Effect 236
Atmospheric Circulation on Venus 237
The Atmosphere of Mars 238
Earth, Mars, and Venus—The Key Difference? 239
Atmospheres of Jupiter and Saturn 240
Atmospheres of Uranus and Neptune 244
The Magnetosphere of Jupiter 245

9 Our Sun 248

Sunspots 248
The Solar Spectrum and the Photosphere 256
The Sun's Energy 260
The Solar Model 264
The Neutrino Problem 269
Solar Activity 269
The Missing Sunspots 278

10 The Stars—A Census 279

Distances—Parallaxes 279
Motions in Space 284
Intrinsic Properties of Stars 286
The Sun and Stars Compared 296
Hertzsprung-Russell Diagram 296
Binary Stars 298
Stars and Planets 301
Star Clusters 302
Pulsating Stars 304
White Dwarfs 308
Exotic Stars 310

11 Birth and Death of Stars 312

Lifetimes 312
H-R Diagrams and the Ages of Star Clusters 314
An Outline of Evolution 318
  Star Formation 318
  The Main Sequence and Beyond 320
  Final Stages of Evolution 322
Stellar Evolution and the Interstellar Medium 330
Origin of the Sun and Planets 332
Possible Explanation of Bode's Law—Evolution of the Solar System 339

12 The Milky Way Galaxy 341

The Size of the Galaxy 342
Interstellar Medium 345

Method A 352
Method B 352
Radio Astronomy and the Interstellar Gas 354
Structure 360
Motions, Rotation, and Mass 363
The Milky Way—Model and Evolution 367
Density-Wave Theory of Spiral Arms 369

13 Galaxies and the Universe **371**

Nebulae or Island Universes? 371
The Shapes of Galaxies 372
Populations Revisited 383
Distances to Galaxies 385
Clusters of Galaxies 386
Two Basic Properties of the Universe 388
The Red Shift 388
Cosmic Background Radiation 391
Why Is the Sky Dark at Night? 391
The Big Bang 393
Other Schemes 396
Deceleration and Density of the Universe 397

14 Space Age Astronomy **401**

Atmospheric Limitations of Ground-Based Observatories 401
Traditional Remedies 403
High-Altitude Observatories 403
High-Altitude Aircraft 404
Balloons 406
Rockets 408
Orbiting Observatories 409
Solar Research Satellites 412
Ultraviolet Astronomy Satellites 417
X-Ray Observatory Satellites 419

15 Exploration of Space **421**

Rocketry 421
Space near the Earth 424

Trapped Particles 426
Dust in the Solar System 431
The Moon 433
Surface Features 434
Rocks and Soil 441
Moonquakes and the Lunar Interior 456
History of the Lunar Surface 458
Evolution of the Earth-Moon System 460
Strategies of Planetary Exploration 463
The Exploration of Mars 464
Discoveries of the Mariner Spacecraft 466
Viking and the Search for Life 476
Missions to the Inner Planets 483
Probes of the Outer Planets 496
The Ultimate Requirement for Space Travel 496
The Cost of Astronomy and Space Research 497

16 Problems in Modern Astronomy **501**

Pulsars and the Crab Nebula 501
Strange Light at General Electric 502
Neutron Stars 504
Pulsars 505
Radio Galaxies 509
The Energy Problem 510
Duration of the Radio Lobes 512
The Confinement Problem 513
Objections to Theories 515
Quasars 516
Black Holes 521
What Is a Black Hole? 521
Do Black Holes Exist? 522
Cygnus X-1 523
Mass Accretion and X-Ray Emission 524
Black Holes in Globular Clusters? 527
Other Uses for Black Holes 528

17 Epilogue **529**

The Earth Moves in Many Ways 529
How Long Ago? 530
The Future 533

Study Guide 535

Appendixes 589

1 Powers of Ten Notation 589
2 Units 592
Length, Area, and Volume 592
Mass 594
Time 594
Angle 594
3 Additional Reading 596
4 Basic Astronomical Equations 598
Kepler's Third Law 598
Newton's Second Law 598
Newton's Law of Universal Gravitation 599
Einstein's Equation for Mass-Energy Equivalence 599
Radiation Laws 599
Parallax Equation 599
Hubble's Law 600
The Magnitude Equation 600
The Doppler Formula 600
5 Summary Tables 601
Properties of the Sun 601
Properties of the Planets 602
Satellites of the Planets 603

Index 605
