I. Aphasiology 1

1. In Search of a Dynamic Theory of Aphasia 3

Eric H. Lenneberg

Aphasiology	3
Cerebral Localization of Functions	9
Evidence for Brain Correlates of Language	10
Preliminaries to Theories on Brain Mechanisms of Language	15
References	18

2. Ontogeny of Stable Speech Areas in the Human Brain 21

E. Bay

Introduction	21
Development of Speech Areas and Aphasia in Children	23
Conclusion	28
References	29

3. The Naming Process and Its Impairment 31

L. S. Tsvetkova

The Problem	31
Hypothesis	35
The Methods and Results of the Experiment	36
Conclusions	45
References	48

4. Basic Problems of Language in the Light of Psychology and Neurolinguistics 49

A. R. Luria

The Problem	49
The Structure of the Word	50
Methods of Investigation	52
The Structure of the Phrase	62
Conclusions	71
References	72

5. Methods for the Description of Aphasic Transformations of Language 75

André Roch Lecours

Description and Analysis of Aphasic Transformations	75
Summary and Conclusion	92
Acknowledgments	93
Bibliography	93

6. The Relation of Nonverbal Cognitive Functions to Aphasia 95

O. L. Zangwill

Introduction	95
Gesture and Pantomime	96
Music	97
Drawing and Modeling	98
Spatial Orientation	99
Abstraction	100
Problem Solving	100
Speech and Thought	102
Conclusion	103
References	104

7. Minor Hemisphere Language and Cerebral Maturation 107

Marcel Kinsbourne

8. The Relationship between Aphasia and Disturbances of Gesture and Perception	117
<i>Henry Hécaen</i>	
Apraxia	117
Apraxia and Aphasia	119
Agnosias	125
References	132
II. Deafness and Blindness	135
9. Phonological Aspects of Language Acquisition in the Hearing and the Deaf	137
<i>D. B. Fry</i>	
Introduction	137
The Priority of Speech Reception	140
The Phonological System	141
Acquisition of the Phonological System by Hearing Children	143
Acquisition of the Phonological System in Cases of Hearing Impairment	147
References	154
10. Visual Feedback and the Acquisition of Intonation	157
<i>Evelyn Abberton</i>	
<i>A. J. Fourcin</i>	
Abnormalities of Deaf Speech	157
Design Requirements and Operation of a Visual Feedback System	158
Conclusion	164
References	164
11. Congenital Deafness and the Development of Thinking	167
<i>Hans Furth</i>	
<i>James Youniss</i>	
The Linguistic Background of Deaf Children	167
Intellectual Development of the Deaf	168
References	175
12. Self-Representation in Language and Play: Observations of Blind Children	177
<i>Selma Fraiberg</i>	
<i>Edna Adelson</i>	
Introduction	177
I/Me Usage in Four Blind Children	178

Kathie's Progress	181
Comparisons of a Blind Child with a Sighted Child	188
References	192

III. Language in the Clinic

193

13. Speech Disorders in Childhood

195

T. T. S. Ingram

Introduction	195
The Neuropathology of Developmental Speech Disorders	196
The Assessment of Speech Development	199
The Prevalence of Speech Disorders	204
The Importance of Speech Defects	206
The Classification of Disorders of Speech in Childhood	207
Description of the Different Disorders of Spoken Language in Childhood	210
Secondary Speech Disorders	233
Secondary Special Readers	233
Environment Conditions and Speech Disorders	246
Specific Retardation of Speech Development	247
"Mixed" Speech Disorders	254
The Diagnosis and Management of Children Suffering from Speech Disorders	254
Acknowledgments	255
References	255

14. Language Development in the Absence of Expressive Speech

263

A. J. Fourcin

With an Introduction By Richard Boydell

Introduction	
Comment	263
References	265
	268

15. Mental Subnormality and Language Development

269

Joanna Ryan

Introduction: Comparison of Normal and Subnormal	269
Language Development in the Subnormal	271
References	276

16. Language Development in Malnourished Children

279

Antonio B. Lefèvre

Language Development and Social Class	279
Poverty and Malnutrition in Developing Countries	281
Methods and Procedures	283
Results	285

Discussion	290
References	294
17. Postural System, Corporal Potentiality, and Language	297
<i>J. B. de Quirós</i>	
<i>Orlando L. Schrager</i>	
Terminology	297
Some Studies of Postural Disturbance, Corporal Potentiality, and Learning	299
Discussion	301
Conclusions and Summary	304
References	305
IV. Reading and Writing	309
18. PreConditions for the Development of Writing in the Child	311
<i>J. de Ajuriaguerra</i>	
<i>M. Auzias</i>	
The Nature of Writing	311
The Motor, Psychomotor, and Praxic Organization in Writing	314
Prehension of a Writing Instrument	315
Speed of Writing	315
Tonic Regulation	316
Spatial Constraints on Writing	317
The Tools	321
Methods of Learning to Write and Scales of Writing	322
Writing Scales	324
Handwriting Difficulties	324
References	326
19. Lessons to Be Learned from the Preschool Orthographer	329
<i>Charles Read</i>	
Preschool Orthographers	329
Classification by Articulatory Features	332
Abstraction from Perceived Phonetic Detail	337
Conclusion	341
References	345
20. The Relation between Spoken and Written Language	347
<i>Frank Smith</i>	
Introduction	347
The Nature of Written Language	348

The Perception of Written Language	353
Related Issues	358
References	359
21. Specific Developmental Dyslexia	361
<i>Macdonald Critchley</i>	
Disorders of Writing	365
22. Literacy as a Mode of Communication on the Warm Springs Indian Reservation	367
<i>Susan U. Philips</i>	
Introduction	367
Literacy on the Warm Springs Indian Reservation: An Introduction	371
A Comparative Analysis of Social Uses of Literacy	373
Some Implications for Literacy Programs	379
References	381
23. On Written Language: Its Acquisition and Its Alexic-Agraphic Disturbances	383
<i>E. Weigl</i>	
Introduction	383
Psycholinguistic Aspects	384
Neuropsychological Aspects	385
References	392
<i>Subject Index</i>	395
