1	Problems in the semantic analysis of text	1
1.1	Introduction	1
1.2	The semantic representation of sentences	2
1.2.1	Examples using syntactic constituent and semantic role	3
1.2.2	The inherent difficulties in defining semantic representations	5
1.2.3	Mapping between syntactic constituents and semantic roles	7
1.2.4	The necessity of pragmatic information	11
1.3	The pulley domain	14
1.3.1	Input assumptions	15
1.3.2	Constraints on the desired output	15
1.4	Overview	17
1.4.1	The template approach	19
1.4.2	Inference-driven mapping	21
1.4.3	Implementation	28
2	Previous computational approaches to semantic analysis	30
2.1	Performing mappings before drawing inferences	33
2.1.1	Templates vs. procedures	33
2.2	The use of case in semantic analysis	40
2.2.1	Introducing case	40
2.2.2	Case as an intermediate level of representation	42
2.2.3	Combining case with generative semantics	47
2.2.4	Case as a deep level of semantic representation	51
2.2.5	Summary	58
2.3	An alternative to case	59
2.3.1	Thematic relations	60
2.3.2	Necessary capabilities for an alternative to case	62
2.3.3	Summary	65
3	A domain formalization	68
3.1	Introduction	69

vi	<i>Contents</i>	
3.2	Entities and their properties in the pulley domain	70
3.2.1	The typing of entities	72
3.2.2	Properties and parts	74
3.2.3	Summary	78
3.3	Lexical entries for verbs	78
3.3.1	Verb categories	80
3.4	Case predicates	88
3.4.1	Cause-motion AGENTS	88
3.4.2	Effect INTERMEDIARIES	90
3.5	Accommodating alternative syntactic realizations	92
3.5.1	Mapping constraints	93
3.5.2	Associating syntactic cues with predicate environments	96
3.5.3	Comparing lexical entries to templates	101
3.6	Filling semantic roles	107
3.6.1	Semantic constraints	107
3.6.2	Pragmatic constraints	109
3.6.3	Similarities between semantics and pragmatics	110
3.6.4	Summary	110
4	Inference-driven mapping	III
4.1	Analysis by synthesis	112
4.1.1	Overview	113
4.1.2	Procedural interpretation of lexical entries	114
4.1.3	Filling semantic roles	116
4.2	The processor in action	121
4.2.1	A simple example	122
4.2.2	Intermediary examples	128
4.3	Analyzing sentences in context	131
4.3.1	Algorithm for filling unfilled roles	132
4.3.2	Filling essential roles	133
4.3.3	Obligatory roles causing failure	145
4.3.4	Summary	146
5	Results of inference-driven semantic analysis	148
5.1	Integrated semantic analysis	148
5.1.1	Basic structure	149
5.2	Distinguishing between definitions and representations	158
5.2.1	Representing alternative syntactic realizations	159
5.2.2	The template approach	159
5.2.3	The inference-driven mapping approach	160
5.2.4	Causative forms	165
5.2.5	Summary	166
5.3	Future research	167

5.3.1	Integration of syntax with semantics	167
5.3.2	Transportability	169
5.4	Conclusion	171

Appendices

A	The pulley problems	174
B	The interpreter	176
	B.1 Execution	177
	B.2 Distributing plural noun groups	178
	B.3 Function evaluation	179
C	The syntactic, semantic, and pragmatic rules	182
D	Verb, case, and relation definitions	188
E	A worked example	192

Figures

1.1	Syntactic parse	<i>page</i> 4
1.2	Basic structure of inference-driven mapping	22
2.1	“John gave the books to my brother”	41
2.2	“We killed dragons”	48
2.3	“Bert gave a boat to Ernie on his birthday”	49
2.4	“I sliced the meat with a knife”	54
2.5	Formula for a drink	56
3.1	Entity hierarchy	71
3.2	Quantity hierarchy	74
3.3	Illustrating hasprop links	75
3.4	“An entity contacts another entity”	95
3.5	“particle1 contacts particle2”	95
3.6	“A particle is attached to another particle”	96
3.7	*“An entity is attached an entity”	97
3.8	“⟨Object1⟩ is attached to ⟨Object 2⟩ at ⟨Locpt1⟩”	103
3.9	“A particle is attached to a string . . .”	104
3.10	“An entity is attached to an entity at a point”	105
3.11	Adding the verb as a terminal node	105
4.1	Basic structure of inference-driven mapping	113
4.2	Filling a semantic role	118
4.3	“Instantiating OBJECT1 (O1) and OBJECT2 (O2)”	124
4.4	“Instantiating LOCPT(L1)”	127
4.5	Algorithm for semantics	133
4.6	Deducing OBJECT2S from LOCPTS	136
4.7	“. . . and is offset by a particle of mass 8 pounds”	145
B.1	Accessing the interpreter	176
B.2	The interpreter for the semantic processor	177
B.3	Alternative distributions of plural noun groups	178
B.4	Distributing plural noun groups	179
B.5	Choosing a syntactic constituent	181
