Preface

ix

1

Introduction

1.1. ON MODELING COMPLEX PROCESSES	3
1.2. INTERPLAY WITH OTHER AREAS OF INVESTIGATION	6
1.3. CONDENSATION AND ACCRETION	8

2

Retention of Volatiles by Planets

2.1. SOLAR-COMPOSITION PROTOPLANETS	19
2.2. SOLAR GAS CAPTURE ON GRAVITATING BODIES	25
2.2.1. <i>Isothermal Capture</i>	25
2.2.2. <i>Adiabatic Capture</i>	27
2.2.3. <i>Radiative-Convective Captured Atmospheres</i>	31
2.2.4. <i>Related Capture Mechanisms</i>	34
2.2.5. <i>Chemical Effects</i>	35

v

2.3. COMPOSITIONS OF CHONDRITIC METEORITES	38
2.3.1. <i>Major Element Mineralogy</i>	39
2.3.2. <i>Chemical–Mineralogical Classification of Chondrites</i>	41
2.3.3. <i>Volatile Element Abundances, Carriers, and Isotopes in Chondrites</i>	43
2.4. CARBONACEOUS CHONDRITE PLANETS	50
2.5. ORDINARY CHONDRITE PARENTAGE	51
2.6. MULTICOMPONENT AND NONHOMOGENEOUS MODELS	54
2.7. EQUILIBRIUM CONDENSATION	58

3

Evolutionary Processes

3.1. HYDROGEN-LOSS EVOLUTION OF SOLAR PRIMORDIAL ATMOSPHERES	70
3.2. ACCRETION, THERMAL HISTORY, AND OUTGASSING	74
3.2.1. <i>Accretion Heating</i>	75
3.2.2. <i>Early Solar Luminosity and the T-Tauri Phase Solar Wind</i>	76
3.2.3. <i>Short-Lived Radionuclides</i>	77
3.2.4. <i>Long-Lived Radionuclides</i>	79
3.2.5. <i>Differentiation Heat Release: Stored Potential Energy</i>	79
3.2.6. <i>Heat of Phase Changes Caused by Changing Temperatures</i>	80
3.2.7. <i>Melting in Multicomponent Systems</i>	81
3.2.8. <i>Outgassing Reactions in Warming Planets</i>	81
3.2.9. <i>Holistic Thermal History and Atmospheric Origin Modeling</i>	84
3.3. ATMOSPHERIC CHEMISTRY	85
3.3.1. <i>Thermochemical Equilibrium in the Atmosphere</i>	86
3.3.2. <i>Disequilibrating Processes in the Atmosphere</i>	87
3.4. CLOUD PHYSICS AND CHEMISTRY	92
3.4.1. <i>Condensation</i>	93
3.5. DISSOLUTION, PHOTOCONDENSATION, AND REACTIONS WITH PLANETARY SURFACES	99
3.5.1. <i>Dissolution</i>	100
3.5.2. <i>Photochemical Condensation</i>	101
3.5.3. <i>Atmosphere–Lithosphere Reactions</i>	102
3.6. BIOCHEMICAL TRANSFORMATIONS	105
3.7. ATMOSPHERIC ESCAPE	107
3.7.1. <i>Thermal Escape</i>	108
3.7.2. <i>Nonthermal Escape</i>	112
3.7.3. <i>Escape Time</i>	116

4

The Atmospheres of the Planets

4.1. MERCURY	120
4.1.1. <i>Atmosphere</i>	120
4.1.2. <i>Surface and Interior</i>	123
4.1.3. <i>Origin</i>	124

4.2. VENUS		128
4.2.1. Pressure and Temperature Structure	134	
4.2.2. Atmospheric Composition	140	
4.2.3. Atmosphere–Lithosphere Interaction	148	
4.2.4. Photochemistry	162	
4.2.5. Cloud Composition and Structure	171	
4.2.6. Atmospheric Escape	177	
4.2.7. Models for Atmospheric Origin	184	
4.3. EARTH		198
4.3.1. Composition, Thermal History, Differentiation, and Outgassing	205	
4.3.2. Primitive Terrestrial Atmospheres	228	
4.3.3. Evolution of the First Life Forms and the Photosynthetic Production of O ₂ from CO ₂ and H ₂ O	238	
4.3.4. Influence of Catastrophic Events on the Evolution of the Biosphere	245	
4.3.5. Contemporary Atmospheric Cycles and Anthropogenic Perturbations	253	
4.4. MARS		264
4.4.1. Structure, Composition, and Thermal History	269	
4.4.2. Atmosphere–Surface Interactions	286	
4.4.3. Atmospheric Structure and Composition	296	
4.4.4. Photochemical Stability and Atmospheric Escape	302	
4.4.5. Organic Matter and the Origin of Life	312	
4.4.6. Origin and Evolution of the Atmosphere	315	
4.5. THE JOVIAN PLANETS		321
4.5.1. Jupiter	323	
4.5.2. Saturn	335	
4.5.3. Uranus and Neptune	338	
4.6. LUNAR-SIZED OBJECTS		342
4.6.1. The Moon	347	
4.6.2. The Galilean Satellites	350	
4.6.3. Titan	361	
4.6.4. Triton and Pluto	366	
4.7. THE ASTEROIDS		369

5

Conclusions

5.1. ASSESSMENT OF COMPETING MODELS	383
5.2. DECISIVE MEASUREMENTS	385
5.3. PRESENT TRENDS AND FUTURE PROSPECTS	388
