|--------------------------------------------------------------------------|-----------|
| <b>1. Introduction: The Sun's Distance, Mass, Radius, Luminosity ...</b> | <b>1</b>  |
| 1.1 Distance                                                             | 2         |
| 1.2 Mass                                                                 | 3         |
| 1.3 Radius                                                               | 4         |
| 1.4 Luminosity                                                           | 5         |
| 1.5 Spectral Energy Distribution                                         | 6         |
| 1.5.1 Energy Flux and Intensity                                          | 6         |
| 1.5.2 The Visible                                                        | 7         |
| 1.5.3 The Infrared                                                       | 8         |
| 1.5.4 The Radio Spectrum                                                 | 9         |
| 1.5.5 The Ultraviolet                                                    | 10        |
| 1.5.6 Extreme Ultraviolet and X-Rays                                     | 11        |
| 1.5.7 Color Indices                                                      | 12        |
| 1.6 Bibliographical Notes                                                | 12        |
| <br>                                                                     |           |
| <b>2. Internal Structure</b>                                             | <b>13</b> |
| 2.1 Construction of a Model                                              | 13        |
| 2.1.1 The Evolutionary Sequence                                          | 13        |
| 2.1.2 The Standard Model                                                 | 15        |
| 2.2 Age and Pre-Main-Sequence Evolution                                  | 16        |
| 2.3 Model Ingredients                                                    | 19        |
| 2.3.1 Conservation Laws                                                  | 19        |
| 2.3.2 Energy Transport                                                   | 20        |
| 2.3.3 The Equation of State                                              | 22        |
| 2.3.4 The Entropy                                                        | 28        |
| 2.3.5 Nuclear Energy Sources                                             | 30        |
| 2.3.6 The Opacity                                                        | 38        |
| 2.3.7 Boundary Conditions and Method of Solution                         | 42        |
| 2.4 Results for a Standard Solar Model                                   | 45        |
| 2.4.1 General Evolution                                                  | 45        |
| 2.4.2 Neutrinos                                                          | 48        |
| 2.5 Non-Standard Models                                                  | 51        |
| 2.5.1 The Low-Z Model                                                    | 51        |
| 2.5.2 Rapidly Rotating Core                                              | 52        |
| 2.5.3 Internal Magnetic Field                                            | 52        |
| 2.5.4 The Internally Mixed Model                                         | 53        |
| 2.6 Bibliographical Notes                                                | 53        |

|                                                                |     |
|----------------------------------------------------------------|-----|
| <b>3. Tools for Solar Observation</b> .....                    | 56  |
| 3.1 Limitations .....                                          | 56  |
| 3.1.1 General Difficulties .....                               | 56  |
| 3.1.2 Seeing: Description and Definitions .....                | 57  |
| 3.1.3 Seeing: How to Live with It .....                        | 61  |
| 3.2 High-Resolution Telescopes .....                           | 68  |
| 3.2.1 Image Scale .....                                        | 68  |
| 3.2.2 Mirrors for Fixed Telescopes .....                       | 69  |
| 3.2.3 Telescopes with Long Primary Focus .....                 | 71  |
| 3.2.4 Telescopes with Short Primary Focus .....                | 76  |
| 3.3 Spectrographs and Spectrometers .....                      | 82  |
| 3.3.1 The Grating Spectrograph .....                           | 82  |
| 3.3.2 The Fourier Transform Spectrometer .....                 | 84  |
| 3.3.3 The Measurement of Line Shifts .....                     | 86  |
| 3.4 Filters and Monochromators .....                           | 89  |
| 3.4.1 The Lyot Filter .....                                    | 89  |
| 3.4.2 Tuning; the Universal Filter .....                       | 93  |
| 3.4.3 A Double Monochromator .....                             | 94  |
| 3.4.4 The Spectroheliograph .....                              | 95  |
| 3.5 Magnetic Fields and Polarimetry .....                      | 96  |
| 3.5.1 Zeeman Splitting .....                                   | 97  |
| 3.5.2 Polarized Light .....                                    | 99  |
| 3.5.3 Unno's Equations .....                                   | 101 |
| 3.5.4 Solar Polarimeters .....                                 | 109 |
| 3.6 Special-Purpose Instruments .....                          | 112 |
| 3.6.1 The Pyrheliometer .....                                  | 112 |
| 3.6.2 Neutrino Detectors .....                                 | 113 |
| 3.6.3 The Coronagraph .....                                    | 116 |
| 3.7 Bibliographical Notes .....                                | 117 |
| <br>                                                           |     |
| <b>4. The Atmosphere</b> .....                                 | 120 |
| 4.1 Radiative Transfer – Local Thermodynamic Equilibrium ..... | 120 |
| 4.1.1 The Equation of Transfer .....                           | 120 |
| 4.1.2 Various Equilibria .....                                 | 121 |
| 4.1.3 Absorption Lines in LTE .....                            | 122 |
| 4.2 Radiative Transfer – Statistical Equilibrium .....         | 125 |
| 4.2.1 Model Assumptions .....                                  | 125 |
| 4.2.2 Line Radiation and Einstein Coefficients .....           | 126 |
| 4.2.3 Continuum Radiation .....                                | 127 |
| 4.2.4 Collisions .....                                         | 128 |
| 4.2.5 The Source Function .....                                | 129 |
| 4.2.6 The Equations of Statistical Equilibrium .....           | 131 |
| 4.3 Atmospheric Models .....                                   | 133 |
| 4.3.1 Limb Darkening .....                                     | 133 |
| 4.3.2 Model Calculations in LTE .....                          | 133 |
| 4.3.3 Models with Departures from LTE .....                    | 139 |

|           |                                                     |            |
