

# CONTENTS

	<i>Preface</i>	xiii
<b>1</b>	<b>Introduction</b>	<b>1</b>
1.1	Historical Overview	1
1.2	The UV and EUV Solar Spectrum	4
1.3	The Outer Layers of the Solar Atmosphere	7
1.4	Scope of this Book	14
<b>2</b>	<b>Emission-Line Spectroscopy</b>	<b>17</b>
2.1	Atomic Processes in the Transition Region	17
2.2	Formation of Optically-Thin Emission Lines	19
2.3	Excitation	20
	2.3.1 Excitation Rates	21
	2.3.2 The Two-Level Atom Approximation	25
2.4	Ionization	26
	2.4.1 Ionization Balance	27
	2.4.2 Time Scales	31
2.5	Abundances	34
2.6	Radiation	37
2.7	Opacity	40
2.8	Diagnostics	41
	2.8.1 Temperature Diagnostics	41
	2.8.2 Density Diagnostics	43
<b>3</b>	<b>Emission-Line Intensity Observations</b>	<b>51</b>
3.1	Disk Observations	51
3.2	Limb Observations	56
3.3	Temporal Observations	60
3.4	Relation to Chromospheric Fine Structure	62
3.5	Relation to the Magnetic Field	67

3.6	Relation to Coronal Structure	69
<b>4</b>	<b>Physical Conditions</b>	<b>74</b>
4.1	Methods of Calculating Emission Measures	74
4.2	Emission Measure Structure of the Transition Region	79
4.3	Abundances	81
4.4	Density Diagnostics	84
4.4.1	Beryllium Isoelectronic Sequence	84
4.4.2	Magnesium Isoelectronic Sequence	89
4.4.3	Boron Isoelectronic Sequence	92
4.4.4	Aluminum Isoelectronic Sequence	97
4.4.5	Carbon Isoelectronic Sequence	98
4.4.6	Nitrogen Isoelectronic Sequence	99
4.4.7	Line Ratios Using Different Ions	99
4.4.8	Transition Region Density	105
4.5	Temperature Diagnostics	108
<b>5</b>	<b>High-Resolution Spectroscopy</b>	<b>114</b>
5.1	Emission-Line Profiles	114
5.2	Line Width Observations	116
5.2.1	Variation with Temperature	117
5.2.2	The C IV Line	119
5.2.3	Relation to the Cell-Network Structure	120
5.2.4	Center to Limb Observations	121
5.2.5	Energetic Implications	123
5.3	Doppler Shifts	129
5.3.1	Observations	129
5.3.2	Relation to Cell-Network Structure	133
5.3.3	Relation to Line Widths	136
5.3.4	Center to Limb Behavior	136
5.3.5	Mass Balance	137
5.3.6	Energy Balance	139
5.4	Non-Gaussian Line Profiles	141
5.4.1	Explosive Events	141
5.4.2	Jets	149
5.4.3	Relation to Bright Points and Spicules	150
5.5	Temporal Variations	151
5.6	Diagnostic Implications of a Dynamic Transition Region	157

<b>6</b>	<b>Empirical Transition Region Models</b>	<b>165</b>
6.1	Transforming Spectroscopic Data into Empirical Models	165
6.2	Effect of Inhomogeneous Structures	173
6.2.1	Contribution of Spicule-Like Structures	173
6.2.2	Filling Factors	176
6.2.3	Absorption by Inhomogeneous Structures	180
6.3	Consequences of the Empirical Models	182
6.3.1	Non-Maxwellian Electron Energy Distribu- tions	182
6.3.2	Diffusion	184
6.4	Empirical Energy Balance	185
6.4.1	Global Energy Balance	186
6.4.2	Local Energy Balance	187
6.5	Examining the Energy Balance Directly Using the Emission Measure	190
6.6	Observed Structure and Energy Balance	193
<b>7</b>	<b>Physical Transition Region Models</b>	<b>196</b>
7.1	Role of the Magnetic Field	196
7.2	Model Equations	200
7.3	Static Models	203
7.3.1	Scaling Laws	203
7.3.2	Static Model Solutions	205
7.3.3	Emission Measures	209
7.4	Steady Flow Models	212
7.4.1	Steady Downflow Models	212
7.4.2	Loop Flow Models	213
7.5	Dynamic Transition Region Models	219
7.6	Cool Loop Models	224
7.6.1	Static Cool Loop Models	224
7.6.2	Combined Hot and Cool Models	228
7.6.3	Radiative Losses at Low Temperatures	230
7.6.4	Flows in Cool Loops	231
7.7	Additional Physics	232
7.7.1	Diffusion	232
7.7.2	Turbulent Conduction	235
7.7.3	Conduction Across the Magnetic Field	236
<b>8</b>	<b>The Transition Region in Perspective</b>	<b>238</b>
8.1	Stellar Transition Regions	238

8.1.1	Line Intensity Observations	238
8.1.2	Physical Conditions and Empirical Models	241
8.1.3	High-Resolution Spectroscopy	244
8.1.4	Cool Stars and the Sun	246
8.2	Physical Models and Observed Structure	248
8.2.1	Observed Features	248
8.2.2	Unknowns	249
8.2.3	Model Features	250
8.2.4	Transition Region Structure	252
8.2.5	Future Work	253
	<i>References</i>	256
	<i>Author Index</i>	268
	<i>Subject Index</i>	273
