Chapter 1 Introduction	1
About This Book	3
Geostatistics	5
Measurement Systems	7
A False Feeling of Security	8
Selected Readings	9
Chapter 2 Elementary Statistics	10
Probability	10
Statistics	28
Joint Variation of Two Variables	34
Induced Correlations	41
Testing Normal Populations	46
Central Limits Theorem	50
Significance	57
The <i>t</i> Test	59
Degrees of Freedom	60
Test of Correlation	66
The <i>F</i> Test	67
Analysis of Variance	74
Two-Way Analysis of Variance	78
The χ^2 Test	80
The Lognormal Distribution and Other Transformations	87
Other Transformations	92
Nonparametric Methods	92
Mann-Whitney Test	93
Kruskal-Wallis Test	97
Nonparametric Correlation	97
Kolmogorov-Smirnov Tests	99
Selected Readings	103

Chapter 3	Matrix Algebra	107
	The Matrix	107
	Elementary Matrix Operations	109
	Matrix Multiplication	111
	Convolution	114
	Matrix Inversion and Simultaneous Equations	117
	Transposition	121
	Determinants	122
	Eigenvalues and Eigenvectors	126
	Selected Readings	139
Chapter 4	Analysis of Sequences of Data	141
	Geologic Measurements in Sequences	141
	Interpolation Procedures	146
	Markov Chains	150
	Embedded Markov Chains	157
	Series of Events	162
	Runs Tests	170
	Least-Squares Methods and Regression Analysis	176
	Curvilinear Regression	186
	Orthogonal Polynomial Regression	196
	Reduced Major Axis	200
	Splines	204
	Segmenting Sequences	211
	Zonation	211
	Seriation	214
	Autocorrelation	217
	Cross-Correlation	225
	Cross-Correlation and Geologic Correlation	233
	Cross-Association	234
	Semivariograms	239
	Modelling the Semivariogram	246
	Spectral Analysis	248
	Harmonic Analysis	255
	The Continuous Spectrum	258
	Filters	263
	Smoothing and Time-Trend Analysis	268
	Derivatives	272
	Substitutability Analysis	276
	Selected Readings	281

Chapter 5	Map Analysis	287
	Geologic Maps—Conventional and Otherwise	287
	Systematic Patterns of Search	289
	Distribution of Points	295
	Uniform Patterns	297
	Random Patterns	299
	Clustered Patterns	305
	Nearest-Neighbor Analysis	308
	Distribution of Lines	312
	Analysis of Directional Data	314
	Testing Hypotheses about Circular Directional Data	321
	Test for Randomness	321
	Testing for a Specified Trend	325
	Test of Goodness-of-Fit	326
	Testing the Equality of Two Sets of Directional Vectors	326
	Spherical Distributions	330
	Matrix Representation of Vectors	334
	Displaying Spherical Data	339
	Testing Hypotheses about Spherical Directional Data	341
	A Test of Randomness	341
	Shape	342
	Fourier Measurements of Shape	343
	Computer Contouring	353
	Contouring by Triangulation	356
	Contouring by Gridding	365
	Moving Averages	377
	Moving Weighted Averages of Block Means	380
	Kriging	383
	Punctual Kriging	383
	Universal Kriging	393
	Calculating the Drift	398
	An Example	403
	Trend Surfaces	405
	Statistical Tests of Trends	419
	Two Trend-Surface Models	425
	Pitfalls	427
	Four-Dimensional Trend Surfaces	430
	Double Fourier Series	435
	Comparing Maps	447
	Overall Similarity	448
	Similarity Maps	449
	Comparing Map Coefficients	459
	Selected Readings	461

Chapter 6	Analysis of Multivariate Data	468
	Multiple Regression	469
	Discriminant Functions	478
	Tests of Significance	485
	Multivariate Extensions of Elementary Statistics	491
	Equality of Two Vector Means	495
	Equality of Variance–Covariance Matrices	497
	Cluster Analysis	502
	Introduction to Eigenvector Methods, Including Factor Analysis	515
	Eckart-Young Theorem	517
	Principal Components Analysis	527
	<i>R</i> -Mode Factor Analysis	546
	Factor Rotation	555
	Maximum Likelihood Factors	561
	<i>Q</i> -Mode Factor Analysis	563
	Principal Coordinates Analysis	574
	Correspondence Analysis	579
	Application to Continuous Variables	589
	Simultaneous <i>R</i> - and <i>Q</i> -Mode Factor Analysis	594
	Multigroup Discriminant Functions	602
	Canonical Correlation	607
	Selected Readings	615
Appendix:	How to Run the STAT Program	621
