Contents

Chapter 1

Introduction to Natural Language Understanding 1

- 1.1 What is Natural Language Understanding? 1
- 1.2 Evaluating Computational Models of Language 2
- 1.3 Knowledge and Language 6
- 1.4 Representations and Ambiguity 8
- 1.5 A Warning about Names in Representations 16
- 1.6 The Organization of Actual Systems 17

PART I

SYNTACTIC PROCESSING 23

Chapter 2

Linguistic Background: An Outline of English 24

- 2.1 Words 25
- 2.2 The Elements of Simple Noun Phrases 26
- 2.3 The Elements of Simple Sentences 30
- 2.4 Prepositional Phrases 34
- 2.5 Embedded Sentences 35
- 2.6 Complements 36
- 2.7 Adjective Phrases 37

Chapter 3

Basic Parsing Techniques 40

- 3.1 Grammars and Sentence Structure 41
- 3.2 What Makes a Good Grammar 47
- 3.3 Top-Down Parsing Methods 50
- 3.4 Bottom-Up Parsing Methods 60
- 3.5 Mixed-Mode Methods 65

Chapter 4

Features and Augmented Grammars 80

- 4.1 Augmented Transition Networks 81
- 4.2 Useful Feature Systems 89
- 4.3 A Sample ATN Grammar for Assertions 95
- 4.4 Verb Complements and Presetting Registers 99
- 4.5 Augmenting Chart Parsers 102
- 4.6 Augmenting Logic Grammars 106
- 4.7 Generalized Feature Manipulation 110

Chapter 5

Grammars for Natural Language: Handling Movement 122

- 5.1 Local Movement 124
- 5.2 Wh-Questions and the Hold Mechanism 130
- 5.3 Relative Clauses 136
- 5.4 Using a Hold List in the Mixed-Mode Parser 139
- 5.5 Handling Movement in Logic Grammars 143
- 5.6 Slashed Categories: An Alternative to Hold Lists 145
- 5.7 A Comparison of the Methods Using Constraints 147

Chapter 6

Toward Deterministic Parsing 160

- 6.1 Human Preferences in Parsing 161
- 6.2 Shift-Reduce Parsers 166
- 6.3 Shift-Reduce Parsers and Ambiguity 171
- 6.4 Lookahead in Parsers 176
- 6.5 The Marcus Parser 178

PART II

SEMANTIC INTERPRETATION 191

Chapter 7

Semantics and a Logical Form 192

- 7.1 Why Derive a Logical Form? 193
- 7.2 Types and Features 194
- 7.3 Selectional Restrictions 197
- 7.4 Case Relations 198
- 7.5 The Structure of Verbs 204
- 7.6 Semantic Networks 206
- 7.7 The Logical Form 212

Chapter 8

Semantic Interpretation 222

- 8.1 The Basic Operations for Semantic Interpretation 223
- 8.2 The Interpretation Algorithm 227
- 8.3 An Example: Assigning Case Roles 230
- 8.4 Embedded and Nonembedded Sentences 234
- 8.5 Rule Hierarchies 236

Chapter 9

Strategies for Semantic Interpretation 244

- 9.1 A Sample Domain 245
- 9.2 Semantic Grammars 250
- 9.3 A Simple Interleaved Syntactic and Semantic Analyzer 253
- 9.4 Semantic Interpretation Based on Preferences 256
- 9.5 Rule-by-Rule Semantic Interpretation Based on the λ -Calculus 260
- 9.6 Rule-by-Rule Interpretation Using Variables 269
- 9.7 Semantically Directed Parsing Techniques 270

Chapter 10

Issues in Semantic Interpretation 282

- 10.1 Scoping Phenomena 283
- 10.2 Modifiers and Noun Phrases 290
- 10.3 Adjective Phrases 294
- 10.4 Noun-Noun Modifiers 300
- 10.5 Lexical Ambiguity 301
- 10.6 Tense and Aspect 306

PART III

CONTEXT AND WORLD KNOWLEDGE 313

Chapter 11

Knowledge Representation 314

- 11.1 The Major Issues in Knowledge Representation 315
- 11.2 Logic-Based Representations 320
- 11.3 Frame-Based Systems 321
- 11.4 Representing Actions 324

Chapter 12**Reference 334**

- 12.1 Simple Reference 336
- 12.2 Simple Anaphoric Reference 339
- 12.3 Extending the History List Mechanism 345
- 12.4 One-Anaphora and VP-Anaphora 351
- 12.5 Other Problems in Reference 355
- 12.6 Ellipsis 357

Chapter 13**Using World Knowledge About Actions 366**

- 13.1 Mapping to the Final Representation 367
- 13.2 Understanding Stereotypical Courses of Action: Scripts 369
- 13.3 Plan-Based Analysis 378
- 13.4 Linguistic Structures and Plan Tracking 385
- 13.5 Complex Goals and Plans 389

Chapter 14**Discourse Structure 396**

- 14.1 Segmentation 398
- 14.2 The Attentional State and Cue Phrases 401
- 14.3 The Tense Filter 404
- 14.4 The Reference Filter 406
- 14.5 Analyzing a Story Using Cue Phrases, Tense, and Reference 411
- 14.6 The Plan-Based Filter 416
- 14.7 Explicit Discourse Relations 419

Chapter 15**Belief Models and Speech Acts 432**

- 15.1 Beliefs, Speech Acts, and Language 433
- 15.2 Simple Belief Models 435
- 15.3 Speech Acts and Plans 443
- 15.4 Speech Act Theory and Indirect Speech Acts 450
- 15.5 Speech Acts and Discourse Structure 454
- 15.6 Formal Models of Belief and Knowledge 457

PART IV

RESPONSE GENERATION 467

Chapter 16

Question-Answering Systems 468

- 16.1 Procedural Semantics 469
- 16.2 LUNAR: A Case Study 475
- 16.3 Logic-Based Question Answering 478
- 16.4 Providing Useful Answers 483
- 16.5 Responses to Questions in More Complex Domains 485

Chapter 17

Natural Language Generation 490

- 17.1 Deciding What to Say 492
- 17.2 Selecting Words and Phrases 496
- 17.3 Producing Sentences Directly from a Representation 500
- 17.4 Grammars and Generation 504

APPENDIX A

Logic and Rules of Inference 514

- A.1 Logic and Natural Language 515
- A.2 Semantics 521
- A.3 A Semantics for FOPC: Set-Theoretic Models 525

APPENDIX B

Symbolic Computation 530

- B.1 Symbolic Data Structures 531
- B.2 Matching 535
- B.3 Horn Clause Theorem Proving 536
- B.4 The Unification Algorithm 539
