Introductory Remarks	1
--------------------------------	---

The Earth's Magnetosphere. By Professor Dr. H. POEVERLEIN, Lehrstuhl für angewandte Geophysik der Technischen Hochschule Darmstadt (Germany). (With 41 Figures)	7
---	---

A. Basic views	7
B. The solar wind	10
C. Fundamentals of magnetodynamics	17
D. Model of the magnetosphere	38
E. Fast particles	60
F. Motions in the magnetosphere	77
G. Solar wind and terrestrial phenomena	90
H. Remarks on plasmapause and current systems (by Professor Dr. N. FUKUSHIMA)	103
I. Recent findings	109
General references	112

The Earth's Radiation Belt. By Dr. W. N. HESS, Boulder, Colorado (USA). (With 60 Figures)	115
---	-----

A. Introduction	115
B. Particle motion in a magnetic field	116
C. The inner zone	127
D. Artificial radiation belts	137
E. Outer belt particles	152
I. Protons and α -particles	152
II. Electrons	164
III. Time variations	178
F. The outer edge	186
G. Aurorae	207
H. Belts on other planets	222
General references	229

Variations rapides du champ magnétique terrestre. Par Dr. E. SELZER, Institut de Physique du Globe, Faculté des Sciences, Université de Paris, Paris (France). (Avec 75 figures)	231
--	-----

A. Introduction. Définitions	231
B. Méthodes d'observation, d'enregistrement et d'analyse	235
C. Classifications et connaissances morphologiques déduites des observations au sol	251
I. Généralités	251
II. Microstructures des perturbations magnétiques	252
III. Microstructures plus particulières	256
IV. Morphologie directe, et spectrale, des pulsations magnétiques	262
V. Pulsations régulières — ou continues — (pc)	265

D. Essai d'une morphologie spatiale des variations magnétiques rapides	277
E. Essai d'une présentation synthétique d'une théorie des pulsations magnétiques	284
F. Oscillations de SCHUMANN	320
Références générales	330
Annexe: Atlas montrant différents types de variations observées	331
Waves and Resonances in Magneto-active Plasma. By Professor V. L. GINZBURG and Professor A. A. RUZHADZE, Academy of Sciences of the USSR, P. N. Lebedev Institute, Moscow (USSR). (With 12 Figures)	395
Introduction	395
A. Foundations of plasma theory	395
I. Principles of linear electrodynamics	402
II. Different description of plasma	412
B. Particle collisions in plasma	425
C. Waves in plasma	441
I. Homogeneous and isotropic plasma	441
II. Homogeneous, gyrotropic (magneto-active) plasma	462
D. The stability problem	490
E. Oscillations and waves in inhomogeneous plasmas	508
I. Generalities and high frequency oscillations	508
II. Low frequency drifting oscillations in an inhomogeneous plasma. The problems of magnetic confinement of a plasma	534
Notations and symbols	558
General references	559
Sachverzeichnis (Deutsch-Englisch)	561
Subject Index (English-German)	569
Index (Français)	577
Errata to Volumes XLIX/2 and XLIX/3	581
