The Rotation of the Earth. By Sir HAROLD SPENCER-JONES, K.B.E., Sc.D., LL.D., D.Phil., F.R.S., Astronomer Royal, Herstmonceux Castle, Hailsham, Sussex (Great Britain). (With 3 Figures)	1
I. The Unit of Time	1
II. The Secular Acceleration of the Motions of the Sun and Moon	2
III. Fluctuations of the Motion of the Moon	8
IV. Seasonal Changes in the Length of the Day.	15
V. The Causes of the Irregular and Seasonal Variations in the Rotation.	17
Bibliography	23
Séismométrie. Par JEAN COULOMB, Professeur à la Faculté des Sciences de l'Université de Paris, Directeur de l'Institut de Physique du Globe, Paris (France). (Avec 33 Figures)	24
Introduction	24
A. Théorie linéarisée des Séismographes pendulaires	24
B. Effets non linéaires	37
C. Réalisation des Séismographes pendulaires	42
D. Séismographes électromagnétiques	52
E. Enregistreurs de Déformation séismique (Strain Seismographs)	64
F. Séismographes électroniques	67
G. Dispositifs accessoires	72
Bibliographie Générale	74
Seismic Wave Transmission. By KEITH EDWARD BULLEN F.R.S., Professor of Applied Mathematics, University of Sydney (Australia). (With 9 Figures)	75
Introduction	75
A. Deformation theory	75
B. The initial conditions	81
C. <i>P</i> and <i>S</i> waves and rays	85
D. Seismic travel-times	91
E. <i>P</i> and <i>S</i> velocity distributions	97
F. Amplitude theory	105
G. Applications of seismic data to the determination of properties of the Earth's deep interior	111
General References	117
Surface Waves and Guided Waves. By WILLIAM MAURICE EWING, Professor of Geology, Columbia University, Director of the Lamont Geological Observatory, Palisades, New York (United States of America) and FRANK PRESS, Professor of Geophysics, California Institute of Technology, Pasadena, California (United States of America). (With 19 Figures)	119
1. Introduction	119
2. LOVE waves in the crust	120
3. RAYLEIGH waves in the crust	125
4. <i>L_g</i> waves	133
5. Waveguides in the upper mantle	134
6. <i>T</i> phase and Sofar waves in the Ocean	135
7. Explosion-generated surface waves	138

L'agitation microsismique. Par JEAN COULOMB, Professeur à la Faculté des Sciences de l'Université de Paris, Directeur de l'Institut de Physique du Globe, Paris (France). (Avec 7 Figures)	140
1. Les différentes formes de microsismes	140
2. Théorie de l'agitation générale	142
3. Applications	150
Bibliographie générale	152
Seismic Prospecting. By WILLIAM MAURICE EWING, Professor of Geology, Columbia University, Director of the Lamont Geological Observatory, Palisades, New York (United States of America) and FRANK PRESS, Professor of Geophysics, California Institute of Technology, Pasadena, California (United States of America). (With 19 Figures)	153
1. Introduction	153
2. Reflection Shooting	153
3. Seismic Refraction Measurements.	163
4. Engineering and Mining Applications	168
Messung elastischer Eigenschaften von Gesteinen. Von HEINRICH BAULE, Bochum und ERICH MÜLLER, Physiker an der Forschungsabteilung der Hüttenwerke Salzgitter AG, Salzgitter-Drütte (Deutschland). (Mit 26 Figuren)	169
A. Statische Methoden	170
B. Dynamische Methoden	180
C. Messung der Wellenausbreitung in Gesteinsproben	186
Literatur	201
Gravity and Isostasy. By GEORGE DAVID GARLAND, Assistant Professor of Geophysics, University of Alberta, Edmonton (Canada). (With 20 Figures)	202
I. Introduction	202
General References	203
II. The Absolute Measurements of Gravity	203
a) Pendulum Methods S. 203. — b) Other Absolute Methods S. 205.	
III. Relative Gravity Measurements.	206
a) Pendulum Measurement S. 206. — b) Static Methods of Measuring Gravity S. 213. — c) Gravity Networks S. 219.	
IV. Reduction of Gravity Observations	221
V. The Mathematical Interpretation of Gravity Anomalies	225
VI. The Meaning of Gravity Anomalies	232
Structure of the Earth's Crust. By WILLIAM MAURICE EWING, Professor of Geology, Columbia University, Director of the Lamont Geological Observatory, Palisades, New York (United States of America) and FRANK PRESS, Professor of Geophysics, California Institute of Technology, Pasadena, California (United States of America). (With 13 Figures)	246
1. Introduction	246
2. Continents	246
3. Oceanic Crust	251
4. Continental Margins and Anomalous Areas	253
5. Composition of the Crust	257
Forces in the Earth's Crust. By ADRIAN EUGEN SCHEIDEGGER, Ph.D., Dipl. Phys., Geophysicist, Dominion Observatory, Ottawa (Canada). (With 12 Figures)	258
1. The Earth's pertinent surface features.	258
2. Principles of a physical explanation	261
3. Dynamics of faulting	263
4. Dynamics of folding	267
5. Physics of orogenesis	273
6. The distributions of continents and oceans.	282
7. Conclusion	286

Radioactivity and Age of Minerals. By JOHN TUZO WILSON, Professor of Geophysics, University of Toronto, RICHARD DONCASTER RUSSELL, Lecturer in Physics, Toronto and RONALD MACCUNN FARQUHAR, Lecturer in Physics, Toronto (Canada). (With 9 Figures)	288
A. Introduction	288
B. Historical review	289
C. Physical considerations.	295
I. Equations of radioactive decay	295
II. Natural radioactive isotopes	298
III. Decay schemes and decay constants	301
a) Uranium and thorium S. 301. — b) The alkali metals S. 303. — c) Carbon and hydrogen S. 307.	
D. Radioactivity of rocks	308
I. Introduction	308
II. Methods and measurement	310
a) Uranium and thorium S. 310. — b) Potassium and rubidium S. 312.	
III. Results	312
a) Uranium and thorium in igneous rocks S. 312. — b) Sedimentary rocks S. 314. — c) Potassium and rubidium S. 316. — d) Meteoritic abundances of uranium, thorium, potassium and rubidium S. 317.	
IV. Conclusion	318
E. Methods of age determinations	319
I. Age determinations based on the decay of uranium and thorium to helium and lead	319
a) Methods for uranium minerals S. 319. — b) Methods for dating common leads S. 325. — c) The age of the earth S. 333.	
II. The potassium methods	335
a) Introduction S. 335. — b) History and status S. 336. — c) Experimental procedures S. 341. — d) Choice of constants S. 342. — e) Experimental results S. 343.	
III. The rubidium methods.	343
IV. The radiocarbon and tritium methods	346
V. Accessory mineral methods and rock analyses.	347
VI. Choice of methods.	349
F. Geological considerations	351
I. The application of physical measurements to geological studies	351
II. The ages of minerals, rocks and formations and their use in establishing a time scale	351
III. Special problems of Precambrian geochronology.	353
a) Length of Precambrian time S. 353. — b) Proportions of metamorphic rocks and of unaltered rocks S. 354. — c) The ages of regions or geological provinces S. 354. — d) The ages of veins S. 356. — e) Continental growth S. 356. — f) Continental nuclei and Keewatin-Timiskaming rock types S. 357. — g) Periodicity of mountain building S. 358. — h) Archean and Proterozoic types of rocks S. 358.	
IV. Principles for establishing a Precambrian geochronology	360
V. Geological time scales	361
a) For Cambrian to recent time S. 361. — b) For Precambrian time S. 362.	
Bibliography	362
The Earth's Interior. By JOHN ARTHUR JACOBS, M.A., Ph.D., F.R.A.S., Professor of Geophysics, Geophysical Laboratory, Department of Physics, University of Toronto (Canada). (With 10 Figures)	364
A. Mechanical Properties	365
a) Analysis of Seismic Data S. 365. — b) Composition of the mantle and core S. 375.	
B. Thermal Properties	380
C. Geomagnetism and the Earth's Interior	400

Electricité tellurique. Par LOUIS CAGNIARD, Professeur de Géophysique appliquée à la Faculté des Sciences de l'Université, Paris (France). (Avec 27 Figures) . . .	407
A. Introduction	407
B. Bases théoriques de la distribution des courants électriques dans le sol	409
C. La prospection électrique	421
D. Dispositifs expérimentaux pour l'étude des courants telluriques. Perturbations diverses	431
E. Résultats généraux d'expérience.	440
F. Relations entre variations magnétiques et telluriques.	457
G. Conclusion	468
Bibliographie	469
Magnetization of Rocks. By STANLEY KEITH RUNCORN, Professor of Physics, University of Durham, King's College, Newcastle upon Tyne I (Great Britain). (With 14 Figures)	470
A. Mineralogical aspects	470
B. Physical processes in the magnetization of rocks.	472
C. Determination of the original magnetization of rocks.	480
D. Survey of observational data of remanent magnetization	481
E. Geophysical interpretation of results	492
F. The magnetic susceptibility of rocks	496
References.	497
The Magnetism of the Earth's Body. By STANLEY KEITH RUNCORN, Professor of Physics, University of Durham, King's College, Newcastle upon Tyne I (Great Britain). (With 11 Figures)	498
A. Main field and secular variation: Observations and analysis	498
B. The electrical conductivity within the earth.	518
C. Theories	522
References.	532
Figur der Erde. Von Dr. KARL JUNG, o. Professor an der Bergakademie Clausthal, Lehrbeauftragter an der Universität Kiel, Clausthal-Zellerfeld (Deutschland). (Mit 57 Figuren)	534
A. Grundbegriffe	534
a) Das Geoid als Figur der Erde S. 534. — b) Bezugs- und Annäherungs-Flächen des Geoids S. 536.	
B. Theorie der Geoidbestimmung	541
a) Die hypothesenfreie Bestimmung der Erdfigur nach BRUNS S. 541. — b) Die Potentialtheorie des Schwerefeldes. Anwendung auf die Figur der Erde S. 542.	
C. Bewegung der Erdachse	606
a) Polbewegung (Breitenschwankung) S. 606. — b) Präzession S. 613.	
D. Neuzeitliche Probleme und Entwicklungen	621
Anhang	623
I. Tabelle der Kugelfunktionen erster Art S. 623. — II. Koeffizienten des Reliefs der Erde nach PREY S. 625. — III. Formeln S. 626. — IV. Zahlenwerte S. 632. — V. Verzeichnis häufig gebrauchter Bezeichnungen S. 637.
