

Contents

1	Introduction by R.T. Bottle	1
2	Libraries and their use by F. Earnshaw	8
3	Primary sources by C.R. Burman	22
4	Translations and their sources, with special reference to Russian literature by C.R. Burman	49
5	Abstracting and information retrieval services by R.T. Bottle and B.J. Kostrewski	62
6	Nomenclature, compound indexes and chemical coding by R.T. Bottle and C. Oppenheim	89
7	Background information and ancillary literature keys by R.T. Bottle	103
8	The use of standard tables of physical data and other physicochemical literature by R.T. Bottle	115
9	Inorganic chemistry by R.B. Heslop	136
10	Nuclear chemistry by K. Jones	143

xiv Contents

11	Beilstein's 'Handbuch' as a source of information on organic chemistry by T.C. Owen and R.M.W. Rickett (revised by R.T. Bottle)	157
12	Other reference works on organic chemistry by A.G. Osborne	171
13	Polymer science by R.T. Bottle and J.M. Sweeney	194
14	The use of the patent literature by C. Oppenheim	203
15	Government publications and trade literature of interest to the chemist by R.T. Bottle and J.S. Rennie	218
16	Some less conventional methods of obtaining information by B. Yates (revised by N.J. Belkin)	236
17	History and biography of chemistry by J.L. Thornton and R.I.J. Tully	251
18	Practical use of the chemical literature by R.T. Bottle	268
	Appendix 1 Suggestions for practical work	282
	Appendix 2 Notes on the solutions to the practical exercises	294
	Index	301
