Preface to the First Edition	xxxv
Preface to the Second Edition	xxxvii
Preface to the Third Edition	xxxix
Part I General Aspects of Medicinal Chemistry Section Editor: Hugo Kubinyi	1
1. A History of Drug Discovery François Chast	3
I. Introduction	4
A. The renewal of chemistry	4
B. The dawn of the organic chemistry crosses the birth of biology	5
<ul><li>II. Two Hundred Years of Drug Discoveries</li><li>A. Pain killers: best-sellers and controversies</li></ul>	6
B. Giving back the heart its youth	10
C. Fight against microbes and viruses	15
D. Drugs for immunosuppression	24
E. Contribution of chemists to the fight against cancer	26
F. Drugs for endocrine disorders	30
G. Anti-acid drugs	34
H. Lipid lowering drugs I. From neurotransmitters to receptors	35 37
J. Drugs of the mind	41
III. Considerations on Recent Trends in Drug Discovery	49
A. From genetics to DNA technology	49
B. Hopes and limits for drug hunting	52
References	55
2. Medicinal Chemistry: Definitions and Objectives, Drug Activity Phases, Drug Classification Systems	63
Peter Imming	02
I. Definitions and Objectives	63
A. Medicinal chemistry and related disciplines and terms	63
B. Drugs and drug substances	64
C. Stages of drug development  II. Drug Activity Phases	64 66
A. The pharmaceutical phase	66
B. The pharmacokinetic phase	66

		C. The pharmacodynamic phase	67
		D. The road to successful drug development?	67
	III.	Drug Classification Systems	67
		A. Classification by target and mechanism of action	68
		B. Other classification systems	70
	Refe	rences	71
3.		asurement and Expression of Drug Effects	73
	Jean-	Pierre Nowicki and Bernard Scatton	
	I.	Introduction	73
	II.	In Vitro Experiments	75
		A. Binding studies	75
		B. Ligand-receptor interaction-induced functional effects	76
		C. Allosteric interaction	78
		D. Expression of functional effects for targets other than GPCRS	79
		E. Cellular and tissular functional responses	79
	III.	Ex Vivo Experiments	81
	IV.	In Vivo Experiments	82
	Refe	rences	83
4.	Мо	lecular Drug Targets	85
		Pierre Gies and Yves Landry	
	I.	Introduction	86
		A. How many drug targets for how many drugs?	86
		B. From the drug target to the response of the organism	86
		C. Drug binding, affinity and selectivity	87
		D. Various ligands for a single target	87
	II.	Enzymes as Drug Targets	88
		A. Targeting human enzymes	88
		B. Targeting enzymes selective of invading organisms	89
	III.	Membrane Transporters as Drug Targets	89
		A. Established drug targets among membrane transporters	89
		B. Progress in the pharmacological control of membrane transporters	89
	IV.	Voltage-Gated Ion Channels as Drug Targets	90
		A. Voltage-gated sodium channels (Na <sub>V</sub> channels)	90
		B. Voltage-gated calcium channels (Ca <sub>V</sub> channels)	91
		C. Potassium channels	91
	V.	Non-Selective Cation Channels as Drug Targets	92
	VI.	Direct Ligand-Gated Ion Channels (Receptors with Intrinsic Ion Channel)	93
		A. P2X-ATP receptors	94
		B. Glutamate-activated receptors	94
		C. The "Cys-loop receptor superfamily"	95
	VII.	Receptors with Intrinsic Enzyme Activity	95
		A. Receptors with guanylate cyclase activity	95
		B. Receptors with serine/threonine kinase activity	96
		C. Receptors with tyrosine kinase activity	96
	VIII.	Receptors Coupled to Various Cytosolic Proteins	97
		A. Receptors coupled to the cytosolic tyrosine kinase JAK	97
		B. Receptors coupled to the cytosolic Src, Zap70/Syk and Btk tyrosine kinases (immunoreceptors)	97
		C. Receptors coupled to the cytosolic serine/threonine kinase IRAK	98
		D. Receptors coupled to caspases and to NFκB	98
	737	E. Receptors of the cellular adhesion	99
	IX.	G-Protein-Coupled Receptors	99
		A. How many druggable GPCRs?	100

<ul><li>B. Diversity of G-proteins</li><li>C. Diversity of GPCR-elicited signaling and related drug targets</li></ul>	101 101
X. Nuclear Receptors As Drug Targets References	103 104
5. Drug Targets, Target Identification, Validation and Screening Kenton H. Zavitz, Paul L. Bartel and Adrian N. Hobden	106
I. Introduction	106
II. Improving the Resolution of Disease Etiology	107
III. Biopharmacuetical Therapies A. Passive immunotherapy	108 108
IV. Drug Target Identification	109
A. Rare mutations leading to generalized therapies	109
B. Mining the proteome	109
C. Yeast two-hybrid systems	110
D. RNA interference	111
V. Hit-to-Lead	113
A. Cell-based screening	113
B. Intracellular receptors C. Intracellular enzymes	113 115
D. G-protein-coupled receptors	115
E. Transgenic animals	117
F. Drug metabolism	118
G. Toxicology	118
VI. Clinical Biomarkers	119
	110
VII. Conclusions	119
VII. Conclusions References	119
