A Few Words about the Book	v
Part C. Model Operators and Free Interpolation	1
Foreword to Part C	5
Chapter 1. The Basic Function Model	9
1.1. Unitary Dilations	9
1.2. Functional Embeddings and the Characteristic Function	17
1.3. The Function Model and Its Transcriptions	28
1.4. Models for Certain Accretive and Dissipative Operators	35
1.5. Exercises and Further Results	43
1.6. Notes and Remarks	73
Chapter 2. Elements of Spectral Theory in the Language of the Characteristic Function	87
2.1. Invariant Subspaces	87
2.2. The H^∞ Functional Calculus	97
2.3. The Class C_0 , Minimal Annihilators, and the Spectrum of M_Θ	100
2.4. The Commutant Lifting Theorem	104
2.5. Exercises and Further Results	106
2.6. Notes and Remarks	137
Chapter 3. Decompositions into Invariant Subspaces and Free Interpolation	153
3.1. Unconditional Bases	155
3.2. Generalized Free Interpolation	160
3.3. Exercises and Further Results	170
3.4. Notes and Remarks	191
Part D. Analytic Problems in Linear System Theory	197
Foreword to Part D	201
Chapter 1. Basic Theory	205
1.1. The Main Formula	205
1.2. Initial Observations about Controllability	205
1.3. Basic Criteria for ACO, ECO, and NCO	207
1.4. Stable Systems	218
1.5. An Example: Heating of a Metal Bar	220
1.6. Exercises and Further Results	222
1.7. Notes and Remarks	233

Chapter 2. First Optimizations: Multiplicity of the Spectrum and the DISC	237
2.1. The Least Dimension of Controlling Subspaces	237
2.2. Reduction to Bounded Operators	238
2.3. Multiplicity of the Spectrum	241
2.4. The Minimal Dimension of Constrained (Realizable) Control	247
2.5. Exercises and Further Results	254
2.6. Notes and Remarks	262
Chapter 3. Eigenvector Decompositions, Vector Valued Exponentials, and Squared Optimization	267
3.1. Examples of Parabolic and Hyperbolic Systems	268
3.2. Complete Generators	271
3.3. Riesz Bases and Exact Controllability	274
3.4. Generalized Controllability and Renormalizations	277
3.5. Null Controllability (NCO)	284
3.6. Weak Controllability	289
3.7. Squared (Energy) Optimization	290
3.8. Control at Time $\tau = \infty$ and Interpolation in H^2	293
3.9. Notes and Remarks	295
Chapter 4. A Glance at Bases of Exponentials and of Reproducing Kernels	299
4.1. Small Perturbations of Harmonic Frequencies	300
4.2. Bases of Exponentials on the Half-Line	301
4.3. Bases of Exponentials on Finite Intervals	304
4.4. Bases of Reproducing Kernels in Model Spaces	307
4.5. Back to Exponentials	313
4.6. A Levinson Completeness Theorem	316
4.7. Exercises and Further Results	321
4.8. Notes and Remarks	334
Chapter 5. A Brief Introduction to H^∞ Control	343
5.1. Input-Output Maps and Transfer Functions	343
5.2. Noise Minimization, Feedback Control, and Sensitivity	346
5.3. Remarks on Robust Stabilization	350
5.4. Scattering Type Input-Output, and Hankel Operators	350
5.5. Remarks on Finite Dimensional Systems	355
5.6. Exercises and Further Results	356
5.7. Notes and Remarks	358
Bibliography	361
Author Index	401
Subject Index	411
Symbol Index	435
Errata to Volume 1	439
