

Contents

1. What This Book is About	1
2. An Introduction to Chemical Thermodynamics and Equilibrium	8
2.1. <i>Why do chemical reactions occur?</i>	8
2.2. <i>Thermochemistry and calorimetry</i>	9
2.3. <i>Standard states</i>	14
2.4. <i>Entropy</i>	15
2.5. <i>Free energy</i>	17
2.6. <i>How free energies behave</i>	19
2.7. <i>Free energies and equilibrium constants</i>	22
2.8. <i>Expressions for equilibrium constants</i>	24
2.9. <i>Different kinds of equilibrium constants</i>	27
Problems	30
3. An Introduction to Chemical Kinetics	33
3.1. <i>Introduction</i>	33
3.2. <i>The rates of chemical reactions</i>	33
3.3. <i>Elementary and rate-determining steps</i>	36
3.4. <i>Rate laws and reaction orders</i>	39
3.5. <i>Integrated rate equations</i>	42
3.6. <i>How rate laws are established</i>	48
3.7. <i>The use of rate laws</i>	51
3.8. <i>The interpretation of rate laws</i>	53
3.9. <i>Catalysis, enzymes, and the prior equilibrium</i>	58
3.10. <i>Reversible reactions</i>	63
3.11. <i>Diffusion-controlled reactions and activation energies</i>	69
3.12. <i>The effects of temperature on rate and equilibrium constants</i>	73
3.13. <i>Conclusion</i>	76
Problems	76
4. Equilibria Involving Non-electrolytes	78
4.1. <i>Introduction</i>	78
4.2. <i>The solubility of a non-electrolyte</i>	78
4.3. <i>Distribution equilibria</i>	85
4.4. <i>Principles of liquid-liquid extraction</i>	88
4.5. <i>Applications of liquid-liquid extraction</i>	92
Problems	96

5. The Solubilities of Ionic Compounds	97
5.1. Introduction	97
5.2. Solubilities and solubility products of strong electrolytes	97
5.3. The common-ion effect	99
5.4. Solubility products of weak electrolytes	104
5.5. Solubilities and solubility products	107
5.6. Weak electrolytes and ion pairs	109
5.7. Ionization and dissociation constants	113
5.8. Conclusion	116
Problems	117
6. Acid-base Reactions	119
6.1. Introduction	119
6.2. Some fundamental ideas	119
6.3. pH scales	124
6.4. The acidities of solutions of acids and bases	129
6.5. Competing equilibria: mixtures of acids or bases	139
6.6. Solutions of polyfunctional acids or bases	143
6.7. Solutions of amphoteric substances	148
6.8. Mixtures of acids with bases	151
6.9. Graphical representations of acid-base equilibria: formation functions	155
6.10. Buffer solutions and buffer capacities	164
6.11. Effects of p <i>c</i> H on the solubilities of weak bases	171
6.12. Non-aqueous solvents	177
6.13. Conclusion	182
Problems	182
7. Complexation Reactions	185
7.1. Introduction	185
7.2. Fundamental ideas	185
7.3. Stepwise complex formation	192
7.4. Solubility and complex formation	197
7.5. Will a precipitate form?	200
7.6. Formation curves and the evaluation of formation constants	201
7.7. Acidity and complex formation	208
Problems	211
8. Redox Processes	213
8.1. Introduction	213
8.2. The nature of a redox reaction	213
8.3. Balancing redox equations	216
8.4. Electrode potentials and the Nernst equation	220
8.5. The meanings of standard potentials	225
8.6. Standard potentials and equilibrium constants	227
8.7. Formal potentials	233
8.8. Some consequences of the Nernst equation	237
8.9. The rates and mechanisms of redox reactions	240

8.10. Equilibrium constants of half-reactions	243
Problems	246
9. Chemical Analysis and Stoichiometry	248
9.1. Introduction	248
9.2. Chemical analysis and analytical chemistry	248
9.3. Preliminary steps in a gravimetric or volumetric analysis	253
9.4. The execution of a gravimetric analysis	259
9.5. The execution of a volumetric analysis	263
9.6. The calculations of gravimetric analysis	268
9.7. The calculations of volumetric analysis	273
Problems	277
10. Precipitation and Coprecipitation	280
10.1. Introduction	280
10.2. Nucleation, supersolubility, and particle size	280
10.3. The mechanism of nucleation	284
10.4. The mechanism of particle growth	285
10.5. The colloidal state	287
10.6. Impurities in precipitates: coprecipitation	291
10.7. Occlusion	295
10.8. Solid-solution formation	297
10.9. A summary of coprecipitation	302
10.10. Precipitation from homogeneous solutions	305
10.11. Aging	307
Problems	308
11. Titration Curves	310
11.1. Introduction	310
11.2. Kinds of titration curves	310
11.3. Some definitions and fundamental ideas	311
11.4. Idealized titration curves	314
11.5. Sigmoidal titration curves	319
11.6. The effects of K'_f and concentration	327
11.7. Titration errors	333
11.8. The behaviors of indicators	339
11.9. Indicators and titration curves in chelometric titrations	342
11.10. Stepwise titrations	347
11.11. Exact titration-curve equations	354
Problems	357
12. Errors in Scientific Measurements	359
12.1. Introduction	359
12.2. Systematic and random errors	361

12.3. Randomness and the normal law of error	365
12.4. The standard deviation of the mean	369
12.5. The propagation of random errors	371
12.6. The design of an experiment	372
12.7. Comparing results	376
12.8. Regression analysis	379
Problems	385
13. Activities and Activity Coefficients	387
13.1. Introduction	387
13.2. Mean ionic activity coefficients	388
13.3. The ionic strength	390
13.4. Evaluating thermodynamic equilibrium constants and mean ionic activity coefficients	392
13.5. The Debye-Hückel limiting law	393
13.6. Calculations employing the limiting law	396
13.7. Activity coefficients at higher ionic strengths	399
13.8. Activity coefficients of non-electrolytes	402
13.9. Single-ion activity coefficients	404
13.10. Activity coefficients and the pH scale	406
Problems	409
14. Potentiometry	410
14.1. Introduction	410
14.2. Electrochemical cells and their potentials	411
14.3. How standard potentials and activity coefficients are evaluated	414
14.4. Redox indicator electrodes	418
14.5. Reversibility and irreversibility	420
14.6. Reference electrodes	427
14.7. Electrical apparatus	430
14.8. Analyses by direct potentiometry	435
14.9. Potentiometric titrations	439
14.10. How formal potentials are evaluated	446
14.11. Liquid-junction potentials	449
14.12. The glass electrode	454
14.13. The selectivities of membrane electrodes	460
14.14. Other membrane electrodes	464
Problems	465
15. Spectroscopy	467
15.1. Introduction	467
15.2. The electromagnetic spectrum	467
15.3. Absorption, emission, and re-radiation	474
15.4. Apparatus for spectroscopy	475
15.5. Atomic and molecular spectra	479
15.6. Beer's law	484
15.7. The measurement of absorbance	486
15.8. Deviations from Beer's law	489
15.9. Plotting absorption spectra	492
15.10. Electronic absorption by metal ions and complexes	495

<i>15.11. Absorption by organic molecules</i>	497
<i>15.12. Spectrophotometric analysis</i>	504
<i>15.13. Spectrophotometric titrations</i>	507
<i>15.14. Spectrophotometric studies of chemical equilibria</i>	509
Problems	517

Answers to Problems	520
----------------------------	-----

Appendix I. Significant Figures	523
---------------------------------	-----

Appendix II. Standard Enthalpies of Formation, Entropies, and Free Energies of Formation of Some Common Substances at 298 K	526
---	-----

Appendix III. Solubility Products of Some Common Salts in Aqueous Solutions at 298 K	528
--	-----

Appendix IV. Overall Dissociation Constants of Some Common Acids in Aqueous Solutions at 298 K	530
--	-----

Appendix V. Stepwise Formation Constants of Some Common Complexes in Aqueous Solutions at 298 K	532
---	-----

Appendix VI. Standard and Formal Potentials and Equilibrium Constants of Some Common Redox Couples in Aqueous Solutions at 298 K	534
--	-----

Index	537
