

CONTENTS

Preface	xi
Introduction	xiii
1. <u>THEORY OF FIELD IONIZATION (FI) AND FIELD DESORPTION (FD)</u>	
1.1. FI probability	1
1.2. Particle supply	7
1.3. Minimum distance for FI	10
1.4. Field-induced resonance states at a surface	10
1.5. Theory of field desorption (FD) and field evaporation	16
1.5.1. Metal field anodes	16
1.5.2. Carbon field anodes	22
1.6. Field electron emission	24
2. <u>FI AND FD TECHNIQUES AND SOURCES</u>	
2.1. General design of FI sources	26
2.1.1. Non-focusing FI sources	26
2.1.2. Focusing FI sources	27
2.1.3. Lens systems	33
2.1.3.1. Spherical lenses	33
2.1.3.2. Quadrupole lenses	35
2.1.3.3. Slit lenses	38
2.1.4. Fluctuation in FI currents	38
2.2. Tips as FI emitters	41
2.2.1. Methods for the production of FI tips	41
2.2.2. Measurement of tip radius and shape factor	44
2.2.3. Angular distribution of FI currents emitted from tips	47
2.2.4. FI current-voltage curves for tip emitters	54
2.2.5. Threshold field strength	59
2.2.6. Heating of point anodes	60
2.3. Sharp metal edges as FI emitters	61

2.4.	Thin wires as FI/FD emitters	63
2.4.1.	Production of thin wires for FI	63
2.4.2.	Activation of thin wires for FI and FD	64
2.4.2.1.	Prototype activation cell	65
2.4.2.2.	HT activation method	68
2.4.3.	Structure of the carbon microneedles	72
2.4.4.	FI current-voltage curves of activated wires	72
2.4.5.	Alternative methods for microneedle production	75
2.4.5.1.	Metal dendrites	75
2.4.5.2.	Smooth wire emitters for FD of salts	78
2.5.	Comparison of tips, sharp metal edges and thin wires	80
2.6.	Design of some FI/FD sources	85
2.7.	Pulsed FI sources	88
2.8.	FI microscopes as sources for mass spectrometers	90
2.8.1.	FI microscopes	90
2.8.2.	Mass analyses with modified FI microscopes	93
2.8.3.	The atom-probe FI microscope	94
2.9.	Resolving power of FI/FD mass spectrometers	97
2.10.	Sample loading techniques for FD wires	98
2.10.1.	Emitter-dipping technique	98
2.10.2.	Syringe technique	99
2.11.	Sensitivity of FI/FD mass spectrometers	101
2.12.	Preparation and recording of an FD mass spectrum	102
2.13.	Automatic emitter emission control, and emitter current program for FD	103
3.	<u>HIGH FIELD SURFACE CHEMISTRY</u>	
3.1.	Charge distribution of organic ions in high electric fields	108
3.1.1.	Quantum mechanical treatment	110
3.1.2.	Semi-classical approximation	116
3.2.	Field dissociation of molecular ions	121
3.2.1.	Classical treatment	122
3.2.2.	Quantum mechanical treatment	124
3.3.	Bond energies of molecular ions	137
3.4.	Field condensation and multilayer adsorption	141

3.4.1.	Dependence of the mean free path on the field strength	147
3.5.	Ion clusters	148
3.6.	Appearance potentials for ion formation in high fields	150
3.7.	Mechanisms of reactions in adsorbed layers at high fields	160
3.7.1.	Field-induced chemisorption of ions	161
3.7.2.	Field-induced adsorption of neutral molecules	162
3.7.3.	Surface ions	162
3.7.4.	Ion-molecule reactions with surface ions	163
3.7.5.	Dehydrogenation of paraffins	164
3.7.5.1.	Surface-induced protonation	164
3.7.5.2.	Reactions of paraffin molecules with radical sites at the surface	165
3.7.6.	Proton transfer reactions in adsorbed layers without surface interaction	165
3.7.7.	Proton transfer reactions in adsorbed layers with surface interactions	167
3.8.	Multiply charged ions	169
3.9.	Promotion of FI	170
3.10.	Supplementary notes	172
4.	<u>KINETICS AND MECHANISMS OF DECOMPOSITION OF FIELD IONS IN THE GAS PHASE</u>	
4.1	Introduction	174
4.2.	Calculation of the decomposition times	174
4.2.1.	Tips, thin wires or blades used as field anodes	177
4.2.1.1.	Tips	177
4.2.1.2.	Wires	178
4.2.1.3.	Edges	179
4.2.2.	Determination of the kinetic energy eU^* of fragment ions	180
4.2.2.1.	Double-focusing mass spectrometer	180
4.2.2.2.	Single-focusing mass spectrometer	182
4.2.3.	Metastable decomposition of ions in the space following the counter-electrode	183
4.2.4.	Peak shapes in the single-focusing mass spectrometer	186
4.2.4.1.	Metastable peak shapes of two-step decompositions	190

4.3.	Possible elementary mechanisms for ion decomposition in high electric fields	192
4.3.1.	Field dissociation	192
4.3.2.	Tunnelling of radicals through potential barriers	192
4.3.3.	Rotation of molecular ions	194
4.3.4.	Field-induced statistical decomposition	194
4.4.	Statistical decomposition in weak fields and in the field free spaces of the mass spectrometer	195
4.5.	Evaluation of the reaction rates	197
4.5.1.	Determination of $k(t)$ in the space between the emitter and the counter-electrode	197
4.5.2.	Determination of $k(t)$ for the decay in the ion-retarding electrodes of a single-focusing mass spectrometer	200
4.5.3.	Determination of $k(t)$ for the decomposition of ions in the field free spaces of double-focusing mass spectrometers	203
4.6.	Normalized rates of some decomposition processes in the time range of about 3×10^{-11} to 2×10^{-6} sec	204
4.7.	Mechanisms of some selected unimolecular reactions of organic ions	204
4.7.1.	Hydrogen randomization	205
4.7.2.	Elimination of H_2O from n-Hexanol	210
4.7.3.	Formation of tropylium ions	215
4.7.4.	Kinetics of competing rearrangement reactions and direct bond cleavages	217
4.7.4.1.	Acetylene dicarbonic acid dimethylester	220
4.7.4.2.	Menthone	221
4.8.	Temperature dependence of FI mass spectra	223
4.9.	Determination of the energy distribution $P(E)$ of field-ionized molecules	230
4.10.	Combination of field ionization kinetics with other mass spectrometric methods	231
5.	<u>QUALITATIVE AND MIXTURE ANALYSIS WITH FI AND FD MASS SPECTROMETRY (MS)</u>	
5.1.	Introduction	234
5.2.	Qualitative analysis with an FI mass spectrometer	235
5.3.	Analysis of mixtures using FI MS	243
5.3.1.	Analysis of low boiling hydrocarbon mixtures	244

5.3.2.	Analysis of heavy petroleum fractions (paraffin waxes)	248
5.3.3.	Analysis of multicomponent polar and unpolar organic mixtures	252
5.3.4.	Analysis of the products of pyrolysis of technical polymers	256
5.4.	Qualitative analysis with the FD mass spectrometer	258
5.4.1.	Introduction	258
5.4.2.	Comparison of mass spectra taken with EI, CI, FI or FD sources	258
5.4.2.1.	Amino acids	259
5.4.3.	Application of FD MS in biochemistry	261
5.4.3.1.	Peptides	261
5.4.3.2.	Nucleosides and nucleotides	264
5.4.3.3.	Pesticides	270
5.4.3.4.	Vitamins	272
5.4.3.5.	Phospholipids	273
5.4.3.6.	Glycosides	274
5.4.4.	Application of FD MS in medicine	275
5.4.4.1.	Cancer drugs and their metabolites	275
5.4.4.2.	Antibiotics	279
5.4.5.	FD MS of salts	281
5.4.5.1.	Introduction	281
5.4.5.2.	FD MS of inorganic salts	282
5.4.5.3.	FD MS of organic salts	286
5.4.5.4.	FI and FD MS of organic molecules by alkali ion attachment at moderate electric fields	290
5.4.6.	FD mass spectra of polymers	294
5.4.6.1.	Biopolymers	294
5.4.6.2.	Technical polymers	298
5.4.7.	FD MS in environmental analysis	299
5.4.8.	Quadrupole FD MS	301
5.5.	Quantitative analysis of mixtures with FD MS	303
5.5.1.	The method of internal standards	303
5.5.2.	High pressure liquid chromatography and FD MS	305
