

# CONTENTS

Preface	xi
Acknowledgements	xiii
<b>CHAPTER 1 The technique</b>	
A. Introduction	1
B. The development of the technique	1
C. Scope of the technique	2
<b>CHAPTER 2 Fundamentals</b>	
A. Some preliminary definitions	4
B. The series of events giving rise to a scintillation	4
C. The solvent	5
D. The primary solutes	8
E. Survey of primary solutes	9
F. The design of new solutes	10
G. Scintillator solution figure of merit	11
H. The secondary solute	11
J. Some secondary solutes	12
<b>CHAPTER 3 Instrumentation</b>	
A. Early equipment	15
B. Development of the modern instrument	15
C. Modern liquid scintillation spectrometers	20
<b>CHAPTER 4 Sample preparation for substances labelled with carbon-14 and tritium</b>	
A. Homogeneous sample preparation	22
B. Heterogeneous sample preparation	26
C. Oxidation techniques	34
D. Low level counting	37
<b>CHAPTER 5 The use of liquid scintillation counting to determine isotopes other than carbon-14 and tritium</b>	
A. Introduction	40

B. Fundamental studies	40
C. Determination of solid samples	42
D. Determination of liquid samples	43
E. Determination of gaseous samples	43
F. General comments on the counting of metal isotopes	48
<b>CHAPTER 6 The phenomenon of quenching and its correction</b>	
A. Introduction	51
B. Types of quenching	51
C. Optimization of quenching	52
D. Quench correction methods	52
E. Devising quench correction curves	61
F. Dual-labelled samples	63
G. Critical assessment of the liability of scintillator solutions to quenching	65
<b>CHAPTER 7 Some general points in liquid scintillation practice</b>	
A. Instrument performance criteria	67
B. Luminescence	68
C. The sample counting bottle (vial)	69
D. Vial caps	71
E. Sample volume	72
F. Temperature control	72
<b>CHAPTER 8 Some other uses of liquid scintillation counters</b>	
A. Suspended scintillators	74
B. Flow cells	74
C. Special vials	75
D. The analytical use of quenching	75
E. The analytical use of chemiluminescence	75
F. Čerenkov counting	77
<b>CHAPTER 9 Radioimmunoassay (RIA)</b>	
A. Introduction and principles	80
B. Isotopes available for RIA	81
C. Methods of determining radioactivity	82
D. Applications	83
<b>BIBLIOGRAPHY</b>	
A. Text-books and conference reports	86
B. Review articles	88
C. Special publications	89

D. Principal source references from the original literature	90
---	----

**APPENDIX**

Table XXV	Cocktails selected from the literature and their suggested use	93
Table XXVI	List of commercially available gels, gelling agents, solubilizers etc. and suggested uses according to sales literature	94

**SUBJECT INDEX**

97
