

CONTENTS

PART ONE FUNDAMENTALS OF HIGH-SPEED LIQUID CHROMATOGRAPHY

CHAPTER 1	The Relationship of Theory to Practice in High-Speed Liquid Chromatography	3
	BARRY L. KARGER	
A.	Introduction	3
B.	General Chromatography	6
	1. <i>Definitions and Descriptions</i>	6
	2. <i>Retention</i>	8
C.	General Separation Principles	11
	1. <i>Resolution</i>	11
	2. <i>Height Equivalent to a Theoretical Plate</i>	20
	3. <i>Optimization and Time</i>	32
	4. <i>Peak Capacity</i>	38
D.	High-Speed Liquid Chromatography	40
	1. <i>Porous Layer Beads</i>	40
	2. <i>Packing Characteristics</i>	43
E.	Conclusion	49
CHAPTER 2	Apparatus for High-Speed Liquid Chromatography	55
	RICHARD A. HENRY	
A.	Introduction	55
B.	Solvent Reservoirs	55
	1. <i>Reservoir Materials</i>	57
	2. <i>Reservoir Options</i>	57

C.	Pumping Systems	59
	1. <i>Mechanical Pumps</i>	59
	2. <i>Pneumatic Pumps</i>	62
	3. <i>Line Filters</i>	64
	4. <i>Back-Pressure Devices</i>	64
D.	Sample Introduction Devices	65
	1. <i>Injection Ports</i>	65
	2. <i>Sample Valves</i>	67
E.	Columns	69
	1. <i>Column Materials</i>	69
	2. <i>Column Plugs</i>	70
	3. <i>Column Fittings</i>	70
	4. <i>Column Configuration</i>	72
	5. <i>Column Packing Devices</i>	72
F.	Column Ovens	76
	1. <i>Circulating Air Bath</i>	77
	2. <i>Circulating Water Bath</i>	78
G.	Fraction Collectors	78
	1. <i>Manual Collection</i>	78
	2. <i>Automatic Collection</i>	78
H.	Flow Measuring Devices	79
	1. <i>Bubble Timer</i>	79
	2. <i>Volumetric Methods</i>	79
	3. <i>Flowmeters</i>	80
	4. <i>Gravimetric Methods</i>	80
I.	Gradient Elution	80
	1. <i>Low-Pressure Gradient Mixers</i>	81
	2. <i>High-Pressure Gradient Mixers</i>	82
	3. <i>Commercial Gradient Accessories</i>	84
J.	Data Acquisition and Reduction	89
	1. <i>Recorders</i>	89
	2. <i>Digital Integrators</i>	90
	3. <i>Computers</i>	90

K.	Laboratory Safety	91
1.	<i>Hardware</i>	91
2.	<i>Ventilation</i>	92
3.	<i>Solvent Handling and Disposal</i>	92
4.	<i>Sample Handling and Disposal</i>	92
CHAPTER 3	Detectors in Liquid Chromatography	95
	S. H. BYRNE, JR.	
A.	Introduction	95
1.	<i>Noise</i>	97
2.	<i>Sensitivity</i>	99
3.	<i>Linearity</i>	100
B.	Ultraviolet Absorption Detector	102
C.	Fluorimeter	106
D.	Radioactivity Detector	108
E.	Polarography	109
F.	Heat of Adsorption	111
G.	Solute Transport Detectors	114
H.	Differential Refractometer	117
1.	<i>Fresnel Refractometer</i>	117
2.	<i>Deflection Refractometer</i>	119
3.	<i>Heat Exchangers in Differential Refractometer Detectors</i>	120
I.	Miscellaneous Detectors	120
1.	<i>Conductivity</i>	121
2.	<i>Dielectric Constant</i>	122
3.	<i>Other Devices</i>	122
CHAPTER 4	The Role of the Mobile Phase in Liquid Chromatography	125
	LLOYD R. SNYDER	
A.	Introduction	125
B.	Practical Aspects of the Solvent	127

C.	Solvent Viscosity and Column Efficiency	130
D.	Solvent Strength in Partition Chromatography	131
	1. <i>Optimization of Solvent Polarity</i>	131
	2. <i>Polarity Scales</i>	135
E.	Solvent Strength in Adsorption Chromatography	142
F.	Solvent Selectivity in Partition and Adsorption Chromatography	145
G.	Phase Immiscibility in Partition Chromatography	148
H.	The General Elution Problem	149
	1. <i>Gradient Elution</i>	152
	2. <i>Temperature and Flow Programming</i>	153
	3. <i>Repeated Separations</i>	154
	4. <i>Coupled Columns</i>	154

PART TWO THE PRACTICE OF LIQUID CHROMATOGRAPHY

CHAPTER 5	The Practice of Liquid-Liquid Chromatography	161
	JOSEPH J. KIRKLAND	
A.	Introduction	161
B.	Essential Features of Liquid-Liquid Chromatography	162
C.	Experimental Factors Affecting Column Efficiency	164
	1. <i>Supports for Liquid-Liquid Chromatography</i>	164
	2. <i>Support Particle Size</i>	168
	3. <i>Partitioning Phase Loadings</i>	169
	4. <i>Column Internal Diameter</i>	172
	5. <i>Sampling</i>	173
D.	Column Preparation	176
	1. <i>Preparation of Liquid-Coated Supports</i>	176
	2. <i>Column Loading</i>	178
E.	Mobile-Phase Effects	181
	1. <i>Carrier Degassing</i>	181

2.	<i>Equilibration of Carrier with Stationary Phase</i>	182
3.	<i>Temperature Effects</i>	183
4.	<i>Stability of Liquid-Liquid Chromatographic Columns</i>	183
F.	The Stationary Phase	186
1.	<i>Liquid-Liquid Chromatographic Systems</i>	186
2.	<i>Surface-Reacted (Bonded) Stationary Phases</i>	192
G.	Application Considerations	196
1.	<i>General Experimental Approach for Analysis</i>	196
2.	<i>Applications of Liquid-Liquid Chromatography</i>	198
CHAPTER 6	The Practice of Liquid-Solid Chromatography	205
	LLOYD R. SNYDER	
A.	Introduction	205
B.	Selectivity in Adsorption Chromatography	206
C.	Practical Considerations in Liquid-Solid Chromatographic Separations	210
1.	<i>Selecting a Column</i>	210
2.	<i>Selecting a Solvent</i>	220
3.	<i>Column Temperature Effects</i>	225
D.	Special Problems in Liquid-Solid Chromatography	226
E.	Application of Liquid-Solid Chromatography to Some Practical Problems	229
CHAPTER 7	The Practice of Gel Permeation Chromatography	237
	KARL J. BOMBAUGH	
A.	Theory of Gel Permeation Chromatography	237
1.	<i>The Separation Mechanism, Using the Steric Exclusion Model</i>	237
2.	<i>What Is Measured?</i>	241
3.	<i>Resolution</i>	242
B.	Practical Aspects of Gel Permeation Chromatography	248
1.	<i>Column Packing Materials</i>	248
2.	<i>Selection of a Column Packing</i>	254

3.	<i>Column Preparation</i>	262
4.	<i>Equipment</i>	264
5.	<i>Operating Conditions</i>	265
C.	High Resolution of Discrete Species by Gel Permeation Chromatography	268
1.	<i>Utility of High-Resolution Gel Permeation Chromatography</i>	268
2.	<i>High Resolution Using Recycle</i>	272
D.	Intepretation of Gel Permeation Chromatograms	279
CHAPTER 8	The Practice of Ion-Exchange Chromatography	287
	CHARLES D. SCOTT	
A.	Introduction	287
B.	Ion-Exchange Materials	288
1.	<i>Desirable Properties</i>	288
2.	<i>Types of Ion-Exchange Materials</i>	288
3.	<i>Ion-Exchange Resins</i>	288
4.	<i>Nonrigid Ion-Exchange Materials</i>	290
5.	<i>Structural Differences</i>	291
6.	<i>Cross-Linkage</i>	292
7.	<i>Mobile Ions in Ion Exchangers</i>	293
C.	Ion-Exchange Equilibria	295
1.	<i>Distribution Coefficient</i>	295
2.	<i>Gradient Elution</i>	297
3.	<i>Solvent Uptake</i>	297
D.	Chromatography with Ion-Exchange Resins	298
1.	<i>Kinetics of the Ion-Exchange Process</i>	298
2.	<i>Choice of Ion-Exchange Resin</i>	299
3.	<i>Choice of Solvent</i>	300
4.	<i>Column Geometry</i>	300
5.	<i>Resin Bead Size</i>	301
6.	<i>Utility</i>	301
7.	<i>Problems with Ion-Exchange Chromatography</i>	301
E.	Resin Availability and Treatment	302
1.	<i>Treatment of Ion-Exchange Resin</i>	302

2.	<i>Variations in Ion-Exchange Resin</i>	303
3.	<i>Particle Size of the Resin</i>	304
4.	<i>Choice of Ion-Exchange Columns</i>	307
5.	<i>Procedure for Packing Columns with Resin</i>	308
6.	<i>Equilibration</i>	311
7.	<i>Life of the Column</i>	311
8.	<i>Introduction of the Sample</i>	312
F.	Examples of Ion-Exchange Chromatography	313
1.	<i>Inorganic Separations</i>	313
2.	<i>Biochemical Separations</i>	315
3.	<i>High-Pressure Ion-Exchange Chromatography</i>	317
G.	The Future of Ion-Exchange Chromatography	319
CHAPTER 9	Liquid Chromatography—An Overview	325
	ISTVÁN HALÁSZ	
A.	Introduction	325
B.	Some Experimental Factors Affecting Separations	326
1.	<i>Interdiffusion Coefficient</i>	326
2.	<i>Viscosity</i>	326
3.	<i>Interaction Between the Eluent and the Stationary Phase</i>	326
4.	<i>Sample Injection</i>	327
5.	<i>Connecting Tubes</i>	328
6.	<i>Retention Time, t_0, of an Inert Peak</i>	328
7.	<i>Efficiency and Permeability</i>	329
8.	<i>Sieve Fraction</i>	330
C.	Some Considerations in Column Performance	330
1.	<i>Speed of Analysis</i>	330
2.	<i>Comparison of Column Efficiency</i>	331
3.	<i>Optimum Linear Velocities</i>	332
4.	<i>Resolution</i>	333
5.	<i>Relative Retention, α</i>	333
D.	New Columns for Liquid Chromatography	334
1.	<i>Stationary Phases</i>	334

2. <i>Different Column Types</i>	334
3. <i>Porous Layer Beads (PLB)</i>	335
4. <i>"Brush-Type" PLB</i>	336

PART THREE APPLICATIONS OF LIQUID CHROMATOGRAPHY

CHAPTER 10	A Comparison of Separation Mechanisms for Liquid Chromatography Applications	343
	KARL J. BOMBAUGH	
A.	Introduction	343
B.	Linear Elution versus Solvent Programmed Liquid-Solid Chromatography	343
C.	Liquid-Solid versus Gel Permeation Chromatography	347
D.	Adsorption versus Partition Chromatography	349
E.	Adsorption Chromatography with Porous Layer Adsorbents	353
F.	Adsorption Chromatography with Specialized Packings	354
	1. <i>Chemically Bonded Supports ("Brushes")</i>	354
	2. <i>Chemically Bonded Porous Layer Beads</i>	357
	3. <i>Porous Polymers as Reversed-Phase Sorbents</i>	358
G.	Basic Adsorbents	360
H.	Exclusion Chromatography	361
	1. <i>Gel Permeation Chromatography as a "Molecular Size Spectrometer"</i>	362
	2. <i>Gel Permeation Chromatography as a Distillation Analyzer</i>	364
	3. <i>Miscellaneous Gel Permeation Analysis</i>	365
I.	Summary	370
CHAPTER 11	Applications of High-Speed Liquid Chromatography Using Controlled Surface Porosity Support	375
	JOHN A. SCHMIT	
A.	Introduction	375

B.	Description of Stationary Phases	376
1.	<i>Liquid-Liquid Partition</i>	376
2.	<i>Reversed-Phase Partition</i>	381
3.	<i>Ion-Exchange</i>	384
C.	Applications of Liquid Chromatography	386
1.	<i>Analgesics</i>	386
2.	<i>Aromatic Carboxylic Acids</i>	388
3.	<i>Hydrocarbons</i>	391
4.	<i>Steroids</i>	393
5.	<i>Herbicides</i>	398
6.	<i>Pesticides</i>	401
7.	<i>Hydroquinones and Related Compounds</i>	406
8.	<i>Antibiotics</i>	406
9.	<i>Dyes and Dye Intermediates</i>	409
10.	<i>Coumarin and Derivatives</i>	411
11.	<i>Alkaloids</i>	413
D.	Conclusions	413
CHAPTER 12	The Nucleic Acid Constituents Analyzed by High-Pressure Liquid Chromatography	417
	DENNIS R. GERE	
A.	Introduction	417
B.	Structures of Nucleic Acid Constituents	417
C.	Column and Instrument Technology	422
D.	Experimental Variation of Parameters	425
E.	Analysis of Nucleotides	428
F.	Analysis of Nucleosides and <i>N</i> -Bases	431
G.	Urine Analysis	436
H.	Summary	436
	LIST OF SYMBOLS	441
	INDEX	447
