Introduction	IX
------------------------	----

PART 1. GENERAL CHARACTERISTICS OF LIQUID CHROMATOGRAPHY DETECTORS

Chapter 1. History, function and classification of detectors	1
History and function	1
Classification of detectors	3
References	4
Chapter 2. Performance criteria of LC detectors	5
The nature of the detector output	6
Detector linearity	9
The determination of the response index of a detector	11
The dynamic range of a detector	13
Detector response	14
Detector noise	15
Measurement of detector noise	17
Detector sensitivity	18
References	20
Chapter 3. Detector characteristics that affect column performance	21
Factors that directly affect band dispersion	21
Theory	22
Turbulence	26
Factors that indirectly affect band dispersion	27
The time constant of the recorder	33
Adsorption effects in the detector	34
Summary	35
References	36
Chapter 4. Summary of detector criteria	37
Chapter 5. Ancillary equipment	41
Predetector reactors	41
Noise filters	45
Integration	49
References	53

PART 2. BULK PROPERTY DETECTORS

Chapter 1. General characteristics of bulk property detectors	55
The limitations of bulk property detectors	55
General performance characteristics and areas of application	57
Chapter 2. The refractive index detector	59
Theory	59
The angle of deviation method	59

	The critical angle method	60
	The Fresnel method	60
	The Christiansen effect	62
	A commercial example of the refractive index detector	63
	Applications of refractometer detector	67
	References	67
Chapter 3.	The dielectric constant detector	69
	Theory	69
	References	78
Chapter 4.	The electrical conductivity detector	79
	A commercial example of an electrical conductivity detector	83
	References	90
Chapter 5.	Additional bulk property detecting systems	91
	The density detector	91
	The thermal conductivity detector	93
	The interferometer detector	95
	The density balance detector	98
	The vapor pressure detector	99
	References	104

PART 3. SOLUTE PROPERTY DETECTORS

Chapter 1.	Principles of detection	105
Chapter 2.	The ultraviolet absorption detector	109
	References	120
Chapter 3.	The fluorometric detector	121
	References	130
Chapter 4.	The polarographic detector	131
	References	138
Chapter 5.	The heat of adsorption detector	139
	References	148
Chapter 6.	The spray impact detector	149
	References	155
Chapter 7.	The radioactivity detector	157
	References	160
Chapter 8.	The electron capture detector	161
	References	166
Chapter 9.	Transport detectors	167
	References	179

PART 4. THE USE OF DETECTORS IN LIQUID CHROMATOGRAPHY

Chapter 1.	The selection of the appropriate detector	181
	The UV detector	181

	The refractive index detector	182
	The fluorescence detector	183
	The wire transport detector	184
	The electron capture detector	185
	The electrical conductivity detector	185
	References	186
Chapter 2.	Quantitative and qualitative analysis	187
	Column temperature	190
	Sample load	191
	Manual measurement of chromatographic data	192
	Computer data processing	193
	Qualitative analysis	195
	Quantitative analysis	197
	References	200
Chapter 3.	Practical hints on detector operation	201
	The recorder	201
	The amplifier	201
	Detector cells	202
	Bubbles — their removal and prevention	202
	Spurious peaks	203
	Base line instability	204
	Short term noise	204
	Long term noise	
	Drift	205
	The moving wire detector	205
	The conductivity detector	206
	The refractive index detector	207
Chapter 4.	Special detector techniques	209
	The differential detector	209
	The integral detector	215
	Vacancy chromatography	217
	References	221
Chapter 5.	Spectroscopic detectors	223
	The LC/UV combination	224
	The Variscan LC/UV spectrometer system	227
	The LC/MS combination	229
	LC/MS by direct sampling of column eluent	230
	The wire transport LC/MS system	233
	The Finnigan LC/MS transport system	240
	References	244
