

Preface

List of Speakers

Table of Contents

General aspects of organic trace analysis, by K. Beyermann	1
Sample preparation and separation methods in organic trace analysis, with special respect to mass spectrometry, by K. Beyermann	17
Methods for the determination of organic traces, with special refer- ence to mass spectrometry, by K. Beyermann	51
Application of thin layer chromatography in the isolation of traces of compounds (candidate drugs) from biological samples for structural analysis by mass spectrometry, by E. Beretta	69
Trends in MS instrumentation for trace analysis, by C. Brunnée	77
Recent developments in organic trace analysis by MS, by D. Hazelby	97
The role of the high resolution G.C. and related ancillary units in the sample treatment for MS trace analysis, by F. Poy	121
Fused silica capillary GC/MS and negative chemical ionization - Applications in environmental science, by D.J. Dixon	139
Sources of error in quantitative mass spectrometry, by B.J. Millard*	163
Contamination problems in lead mass-spectrometry analysis at the sub- microgram level, by M. De Bortoli	181
Methods for improving selectivity in quantitative GC-MS, by D.S. Millington	189
Quantitative analysis of trace organic compounds in the atmosphere: determination of halocarbons, by F. Bruner	203
Determination of 2,3,7,8.-tetrachloro-dibenzo-p-dioxin at the part per trillion level in biological and environmental samples, by S. Facchetti and A. Leoni	215

X

Stable isotopes in trace biomedical analysis, by B.J. Millard*	245
Identification of compounds at trace levels, by A. Heyndrickx	259
Importance of data collection, storage and fundamental toxicological research on trace elements, by W. Penning	291
Round table discussion at the end of the Ispra Course "Application of mass spectrometry to trace analysis", by K. Beyermann	311
Subject Index	317

*These papers were submitted but not read at the course because the author was unable to attend.
