Preface *page* xix

1 Introduction 1

1.1 Introduction 1

1.2 A simple example 3

1.3 Statistics 7

1.4 Geostatistics 10

1.5 Key points of Chapter 1 11

2 Exploratory data analysis 12

2.1 Exploratory analysis scope 12

2.2 Experimental distribution 15

2.2.1 Histogram 16

2.2.2 Ogive 17

2.2.3 Summary statistics 19

2.2.4 The box plot 22

2.3 Transformations and outliers 24

2.3.1 Normality 24

2.3.2 Outliers 26

2.4 Normality tests and independence 26

2.5 Spatial structure 27

2.6 The experimental variogram 30

2.7 Meaning of experimental variogram 32

2.7.1 Scale 32

2.7.2 Near the origin 34

2.7.3 Large-scale behavior 39

2.8 Key points of Chapter 2 40

3 Intrinsic model 41

3.1 Methodology overview 41

3.2 Illustrative example 47

3.3 Intrinsic isotropic model 51
3.4 Common models 54
3.4.1 Stationary models 54
3.4.2 Intrinsic nonstationary models 61
3.4.3 Model superposition 62
3.4.4 Special topic: microstructure 64
3.5 Interpolation using kriging 65
3.6 Kriging system 67
3.7 Kriging with moving neighborhood 71
3.8 Nonnegativity 72
3.9 Derivation 72
3.10 The function estimate 74
3.11 Conditional realizations 76
3.11.1 Point simulation 76
3.11.2 Function simulation 77
3.12 Properties of kriging 77
3.13 Uniqueness 79
3.14 Kriging as exact interpolator 79
3.15 Generalized covariance functions 80
3.16 Key points of Chapter 3 82
4 Variogram fitting 83
4.1 The problem 83
4.2 Prior information 84
4.3 Experimental variogram 85
4.4 Residuals 86
4.4.1 The concept 86
4.4.2 Residuals in kriging 88
4.4.3 Distribution of residuals 89
4.5 Model validation 90
4.5.1 Q_1 statistic 91
4.5.2 Q_2 statistic 93
4.5.3 Normality 95
4.5.4 No correlation 96
4.5.5 Ordering 96
4.6 Variogram fitting 96
4.7 On modeling 99
4.8 Estimation simulator 101
4.8.1 Synthetic realizations 101
4.8.2 Example 1 102
4.8.3 Example 2 105
4.9 Key points of Chapter 4 109

5 Anisotropy 110
5.1 Examples of anisotropy 110
5.2 Overall approach 112
5.3 Directional variogram 113
5.4 Geoanisotropy 114
5.4.1 General 114
5.4.2 Two dimensions 116
5.4.3 Three dimensions 117
5.5 Practical considerations 118
5.6 Key points of Chapter 5 119
6 Variable mean 120
6.1 Limitations of constant mean 120
6.2 The linear model 123
6.3 Estimation with drift 125
6.4 Generalized covariance function 127
6.5 Illustration of the GCF concept 130
6.6 Polynomial GCF 133
6.7 Stationary-increment processes 134
6.8 Splines 135
6.9 Validation tests 136
6.10 Parameter estimation 139
6.11 On model selection 140
6.12 Data detrending 143
6.13 An application 143
6.14 Variance-ratio test 145
6.15 Key points of Chapter 6 148
7 More linear estimation 150
7.1 Overview 150
7.1.1 Kriging with known mean 151
7.1.2 Estimation of drift coefficients 151
7.1.3 Estimation of continuous part 151
7.1.4 Spatial averaging 152
7.2 Estimation with known mean 152
7.2.1 Known drift 152
7.2.2 Simple kriging 154
7.3 Estimation of drift coefficients 156
7.4 Continuous part 158
7.4.1 Rationale 158
7.4.2 Kriging equations 159

7.5 Spatial averaging 163
7.5.1 Stationary 163
7.5.2 Intrinsic 165
7.5.3 Variable mean 166
7.6 Spatial averaging implementation 166
7.6.1 Nugget effect 166
7.6.2 Numerical quadrature 167
7.6.3 Examples 168
7.7 Key points of Chapter 7 171
8 Multiple variables 172
8.1 Joint analysis 172
8.2 Second-moment characterization 173
8.3 Best linear unbiased estimation 175
8.4 Another cokriging example 177
8.5 Model selection 179
8.6 Method of auxiliary variables 180
8.7 Matrix form 182
8.7.1 Linear model 182
8.7.2 BLUE 182
8.7.3 Parameter estimation 183
8.8 Key points of Chapter 8 183
9 Estimation and GW models 184
9.1 Groundwater models 184
9.2 Using a mathematical model 187
9.2.1 Equations and conditions 187
9.2.2 Log-transmissivity 188
9.2.3 Derivation of joint moments 188
9.3 Monte Carlo simulations 189
9.3.1 The approach 189
9.3.2 Example 190
9.4 First-order approximation 196
9.4.1 The principle 196
9.4.2 Linearization 196
9.4.3 Moment derivation 198
9.5 Large-domain analytical solutions 205
9.6 Numerical small-perturbation method 212
9.7 An inverse problem 214
9.8 Key points of Chapter 9 219
9.9 Addendum 220

A *Probability theory review* 221
A.1 Introduction 221
A.1.1 Experiments 221
A.1.2 Probability 222
A.1.3 Random variables 222
A.2 Jointly distributed random variables 223
A.3 Expectation and moments 225
A.4 Functions of random variables 227
A.5 Further reading 228
A.6 Review exercises 228
B *Lagrange multipliers* 232
B.1 The method 232
B.2 Explanation 233
C *Generation of realizations* 235
C.1 Background 235
C.2 Linear transformation 236
C.3 Random vector 237
C.4 Stationary random functions 238
References 239
Index 247
