1	Introduction	1
A	From Statistics to Geostatistics	5
2	Mean, Variance, Covariance	7
	The mean: center of mass	7
	Distribution function	9
	Expectation	10
	Variance	11
	Covariance	12
3	Linear Regression and Simple Kriging	13
	Experimental covariance	13
	Linear regression	15
	Variance-covariance matrix	18
	Multiple linear regression	19
	Simple kriging	22
4	Kriging the Mean	25
	Arithmetic mean and its estimation variance	25
	Estimating the mean with spatial correlation	26
	No systematic bias	27
	Variance of the estimation error	28
	Minimal estimation variance	28
	Kriging equations	29
	Case of no correlation	30
B	Geostatistics	33
5	Regionalized Variable and Random Function	37
	Multivariate time/space data	37
	Regionalized variable	38
	Random variable and regionalized value	39

Random function	40
Probability distributions	41
Strict stationarity	41
Stationarity of first two moments	42
6 Variogram Cloud	43
Dissimilarity versus separation	43
Experimental variogram	45
Replacing the experimental by a theoretical variogram	47
7 Variogram and Covariance Function	48
Regional variogram	48
Theoretical variogram	48
Covariance function	50
Positive definite function	51
Conditionally negative definite function	51
Fitting the variogram with a covariance function	53
8 Examples of Covariance Functions	55
Nugget-effect model	55
Exponential covariance function	55
Spherical model	56
Derivation of the spherical covariance	57
9 Anisotropy	60
Geometric Anisotropy	60
Rotating and dilating an ellipsoid	60
Exploring 3D space for anisotropy	62
Zonal anisotropy	63
Nonlinear deformations of space	63
10 Extension and Dispersion Variance	64
Support	64
Extension variance	65
Dispersion variance	66
Krige's relation	67
Change of support effect	68
Application: acoustic data	70
Comparison of sampling designs	72
11 Measures and Plots of Dispersion	76
Tonnage, recovered quantity, investment and profit	76
Selectivity	78
Recovered quantity as a function of tonnage	80
Time series in environmental monitoring	81

12 Ordinary Kriging	83
Ordinary kriging problem	83
Simple kriging of increments	85
Block kriging	86
Simple kriging with an estimated mean	88
Kriging the residual	89
Cross validation	90
Kriging with known measurement error variance	91
13 Kriging Weights	93
Geometry	93
Geometric anisotropy	95
Relative position of samples	95
Screen effect	96
Factorizable covariance functions	97
Negative kriging weights	99
14 Mapping with Kriging	100
Kriging for spatial interpolation	100
Neighborhood	101
15 Linear Model of Regionalization	105
Spatial anomalies	105
Nested variogram model	106
Decomposition of the random function	107
Second-order stationary regionalization	108
Intrinsic regionalization	109
Intrinsic regionalization with mostly stationary components	109
Locally stationary regionalization	110
16 Kriging Spatial Components	111
Kriging of the intrinsic component	111
Kriging of a second-order stationary component	112
Filtering	114
Application: kriging spatial components of arsenic data	115
17 The Smoothness of Kriging	117
Kriging with irregularly spaced data	117
Sensitivity to choice of variogram model	120
Application: kriging topographic data	121
C Multivariate Analysis	125
18 Principal Component Analysis	127
Transformation into factors	127

Maximization of the variance of a factor	128
Interpretation of the factor variances	129
Correlation of the variables with the factors	130
19 Canonical Analysis	136
Factors in two groups of variables	136
Intermezzo: singular value decomposition	137
Maximization of the correlation	137
20 Correspondence Analysis	139
Disjunctive table	139
Contingency table	139
Canonical analysis of disjunctive tables	140
Coding of a quantitative variable	140
Contingencies between two quantitative variables	140
Continuous correspondence analysis	141
D Multivariate Geostatistics	143
21 Direct and Cross Covariances	145
Cross covariance function	145
Delay effect	146
Cross variogram	147
Pseudo cross variogram	150
Difficult characterization of the cross covariance function	150
22 Covariance Function Matrices	152
Covariance function matrix	152
Cramer's theorem	152
Spectral densities	153
Phase shift	154
23 Intrinsic Multivariate Correlation	155
Intrinsic correlation model	155
Linear model	156
Codispersion coefficients	157
24 Heterotopic Cokriging	159
Isotopy and heterotopy	159
Ordinary cokriging	160
Simple cokriging	162
Collocated simple cokriging	164
Collocated ordinary cokriging	165

25	Isotopic Cokriging	167
	Cokriging with isotopic data	167
	Autokrigeability	168
	Bivariate ordinary cokriging	170
26	Multivariate Nested Variogram	172
	Linear model of coregionalization	172
	Bivariate fit of the experimental variograms	174
	Multivariate fit	175
	The need for an analysis of the coregionalization	178
27	Coregionalization Analysis	181
	Regionalized principal component analysis	181
	Generalizing the analysis	182
	Regionalized canonical and redundancy analysis	183
	Cokriging regionalized factors	183
	Regionalized multivariate analysis	184
28	Kriging a Complex Variable	187
	Coding directional data as a complex variable	187
	Complex covariance function	187
	Complex kriging	188
	Cokriging of the real and imaginary parts	189
	Complex kriging and cokriging versus a separate kriging	190
	Complex covariance function modeling	191
29	Bilinear Coregionalization Model	194
	Complex linear model of coregionalization	194
	Bilinear model of coregionalization	195
E	Non-Stationary Geostatistics	197
30	External Drift	199
	Depth measured with drillholes and seismic	199
	Estimating with a shape function	200
	Estimating external drift coefficients	202
	Cross validation with external drift	203
	Regularity of the external drift function	209
31	Universal Kriging	210
	Universal kriging system	210
	Estimation of the drift	212
	Underlying variogram and estimated residuals	213
	From universal to intrinsic kriging	216

32 Translation Invariant Drift	218
Exponential-polynomial basis functions	218
Intrinsic random functions of order k	219
Generalized covariance function	219
Intrinsic kriging	221
Trigonometric temporal drift	222
Filtering trigonometric temporal drift	222
Dual kriging	223
Splines	224
APPENDIX	227
Matrix Algebra	229
Linear Regression Theory	239
Covariance and Variogram Models	244
Additional Exercises	247
Solutions to Exercises	249
References and Software	260
Bibliography	265
Index	285
