## Biology of Pheromones

*J. A. A. Renwick and J. P. Vité*

1. Introduction . . . . .	2
2. Biological Function . . . . .	2
2.1. Sex Pheromones . . . . .	2
2.2. Aggregation Pheromones . . . . .	3
2.3. Inhibitors . . . . .	4
2.4. Allelochemicals . . . . .	6
2.5. Communication Systems . . . . .	7
3. Biosynthesis and Release . . . . .	8
3.1. Stimulation of Production . . . . .	9
3.2. Rhythm of Release . . . . .	12
4. Bioassay Methods . . . . .	13
4.1. Laboratory Bioassays . . . . .	13
4.2. Electrophysiology . . . . .	14
4.3. Field Bioassays . . . . .	14
5. Genetic Factors . . . . .	17
5.1. Alternative Systems . . . . .	17
5.2. Population Variations . . . . .	18
5.3. Taxonomy . . . . .	19
6. Case Histories . . . . .	19
6.1. <i>Dendroctonus frontalis</i> . . . . .	19
6.2. <i>Trypodendron</i> (= <i>Xyloterus</i> ) <i>lineatum</i> . . . . .	21
6.3. <i>Ips typographus</i> . . . . .	22
6.4. <i>Lymantria</i> (= <i>Porthetria</i> ) . . . . .	23
7. Conclusions . . . . .	23
8. References . . . . .	24

## Chemistry of Insect Pheromones

*H. J. Bestmann and O. Vostrowsky*

1. Insect Behavior Controlling Chemicals in Plant Protection . . . . .	30
2. The Chemical Structure of Pheromones . . . . .	33
Chemical Structure, Occurrence, and Behavioral Release of Insect Pheromones and Pheromone Analogs . . . . .	34
2.1. Sex Attractants of Female Butterflies and Moths, and Related Compounds . . . . .	34
2.2. Pheromones of Male Lepidoptera . . . . .	46
2.3. Pheromones of the Bark Beetles (Scolytidae) . . . . .	48
2.4. Sex and Aggregation Pheromones of Other Beetle Families . . . . .	50
2.5. Sex and Aggregation Pheromones of Cockroaches (Blattidae, Orthoptera) . . . . .	52
2.6. Alarm Substances of Ants (Formicidae, Hymenoptera) . . . . .	52
2.7. Trail Pheromones of Ants and Termites (Formicidae and Isoptera) . . . . .	53
2.8. Sex Attractants of Flies (Diptera) . . . . .	54

## Inhaltsverzeichnis

2.9. Aphids and Scales (Homoptera)	54
2.10. True Bugs (Heteroptera)	55
2.11. Bees, Wasps, Bumble Bees, Sawflies (Hymenoptera)	55
3. Physiological and Behavioral Activity of Pheromones	57
3.1. Electrophysiology	57
3.2. Structure-Activity Relationships	58
3.3. Multicomponent Pheromone Complexes	63
3.4. Olfactometer Experiments and Field Tests	65
4. Isolation and Structure Elucidation of Pheromones	66
4.1. General	66
4.2. The Bioassay	68
4.3. Pheromone Screening	69
4.4. Pheromone Sources	69
4.5. Isolation of Pheromones	71
4.6. Chromatographic Purification and Fractionation for the Identification of Pheromones	74
a) Gel Permeation Chromatography (GPC)	74
b) Liquid Chromatography under Normal Pressure	76
c) High Performance Liquid Chromatography (HPLC)	77
d) Thin Layer Chromatography (TLC)	78
e) Gas Chromatography	79
4.7. Identification and Structure Elucidation	79
a) Ultrared Spectroscopy	80
b) Ultraviolet Spectroscopy	80
c) Nuclear Magnetic Resonance – NMR – Spectroscopy	81
d) Mass Spectroscopy	82
e) Gas Chromatographic Techniques	86
5. Synthesis of Insect Pheromones	91
5.1. Butterflies and Moths – Lepidoptera	91
a) Wittig Olefination and Related Methods	92
b) The "Acetylenic Approach" to Pheromone Synthesis	104
c) Reduction of Allyl Diethyl Phosphonates	113
d) Coupling Reactions with Organometallic Reagents	114
e) [3.3]-Sigmatropic Reactions	119
f) Transition Metal Catalyzed Metathesis Reaction	121
g) Electrochemical Procedures	122
h) Stereoselective Syntheses of Chiral Lepidoptera Pheromones	123
5.2. Beetles – Coleoptera	125
a) Scolytidae – Bark Beetles	125
b) Dermestidae	132
c) Curculionidae	133
d) Bruchidae	135
5.3. Flies – Diptera	137
5.4. Hymenoptera	140
5.5. Pheromones of Isoptera	144
5.6. Synthesis of Cockroach Pheromones (Blattaria)	145
6. Acknowledgement	148
7. References	148

## Die praktische Verwendung von Insektenpheromonen

### M. Boneß

1. Einleitung	165
2. Sexuallockstoffe und Aggregationspheromone	166
2.1 Pheromone als Indikatoren	166
2.2. Bekämpfung von Schädlingen im Anlockverfahren	169

2.3. Störung der chemischen Kommunikation . . . . .	171
2.4. Lockstoffe als Hilfsmittel für andere Verfahren . . . . .	173
3. Anwendungsmöglichkeiten sonstiger Pheromone . . . . .	173
4. Umweltprobleme und Nebenwirkungen . . . . .	173
5. Entwicklung und Stand der Pheromon-Anwendung . . . . .	174
5.1. Forst und Gehölze . . . . .	174
5.2. Obst, Wein, Oliven . . . . .	175
5.3. Getreide . . . . .	176
5.4. Baumwolle . . . . .	176
5.5. Sonstiger Acker- und Gartenbau . . . . .	177
5.6. Vorratsschutz . . . . .	178
5.7. Hygiene, Medizin and Veterinärmedizin . . . . .	178
6. Tendenzen, Probleme, Aussichten und Grenzen . . . . .	178
7. Literatur . . . . .	180

**The Use of Juvenoids in Insect Pest Management**

*J. P. Edwards and J. J. Menn*

1. Introduction . . . . .	185
2. The Role of Endogenous Juvenile Hormones . . . . .	187
3. Effects of Exogenous Application of Juvenoids . . . . .	188
3.1. Morphogenetic Effects . . . . .	189
3.2. Ovicidal Effects and Disruption of Embryogenesis . . . . .	189
3.3. Effects on the Reproductive System and Fecundity . . . . .	189
3.4. Effects on Diapause, Polymorphism, and Behaviour . . . . .	190
4. The Use of Juvenoids Against Pest Species . . . . .	191
4.1. Pests of Field Crops, Silviculture, and Horticulture . . . . .	191
4.2. Pests of Medical and Veterinary Importance . . . . .	196
4.3. Pests of Stored Products . . . . .	200
4.4. Household, Domestic, and Other Pests . . . . .	203
4.5. The Use of Juvenoids in Sericulture . . . . .	206
5. Some Factors Influencing the Practical Use of Juvenoids . . . . .	206
5.1. Choice of Target Species . . . . .	206
5.2. Metabolism, Resistance, and Synergism . . . . .	206
6. Conclusions . . . . .	208
7. References . . . . .	209

**Pflanzenschutzpräparate mikrobieller Herkunft**

*K. Bauer, D. Berg, E. Bischoff, H. v. Hugo und P. Kraus*

1. Einführung . . . . .	216
2. Fungizide und Bakterizide . . . . .	217
2.1. Einleitung . . . . .	217
2.2. Handelsprodukte . . . . .	219
2.3. Forschungs- und Entwicklungspräparate . . . . .	232
3. Insektizide . . . . .	289
3.1. Einleitung . . . . .	289
3.2. Handelsprodukte . . . . .	290
3.3. Forschungs- und Entwicklungspräparate . . . . .	295
4. Herbizide und Wachstumsregulatoren . . . . .	314
4.1. Einleitung . . . . .	314
4.2. Forschungs- und Entwicklungspräparate . . . . .	314

## **Insektizide Phosphorsäureester**

### *Ch. Fest*

1. Einleitung . . . . .	329
2. Insektizide vom Typ der (Thio)Phosphorsäure-arylester . . . . .	330
3. Insektizide vom Typ der (Thio)Phosphorsäure-heteroarylester . . . . .	333
4. Insektizide vom Typ der (Thio)Phosphorsäure-thioalkylester . . . . .	337
5. Insektizide vom Typ der Enol(thio)phosphorsäureester . . . . .	340
6. Sonstige . . . . .	341
7. Literatur . . . . .	343

## **Bacterial Plant Diseases and Their Control**

### *T. Egli and E. Sturm*

1. Introduction . . . . .	346
2. The Economic Importance of Bacterioses . . . . .	347
3. The Causative Agents of Bacterioses . . . . .	348
3.1. Classification and Taxonomy . . . . .	348
3.2. Bacterial Genera to which Causative Agents of Bacterioses are Assigned . . . . .	352
4. Examples of Bacterial Plant Diseases . . . . .	357
4.1. Bacterial Leaf Blight of Rice . . . . .	357
4.2. Fire Blight of Pear and Apple . . . . .	359
4.3. Lethal Yellowing of Coconut Palms . . . . .	363
5. Control of Bacterial Plant Diseases . . . . .	365
5.1. Biological Aspects . . . . .	365
5.2. Chemical Control – General Considerations . . . . .	368
6. Chemistry of Bactericidal Compounds . . . . .	369
6.1. Inorganic, Nonmetallic Compounds . . . . .	369
6.2. Inorganic and Organic Metal Compounds . . . . .	370
6.2.1. Mercury Compounds . . . . .	370
6.2.2. Copper Compounds . . . . .	370
6.3. Dithiocarbonates and Dithiocarbamates . . . . .	372
6.4. Alcohols and Other Aliphatic Compounds . . . . .	373
6.5. Aromatic Compounds . . . . .	374
6.6. Heterocyclic Compounds . . . . .	376
6.6.1. Heterocyclics Containing Nitrogen . . . . .	376
6.6.2. Heterocyclics Containing Nitrogen and Sulfur . . . . .	378
6.7. Antibiotics . . . . .	381
7. References . . . . .	384

## **Recent Advances in the Chemical Control of Oomycetes**

### *T. H. Staub and A. Hubele*

1. Introduction . . . . .	390
2. Biology of Plant-Pathogenic Oomycetes . . . . .	390
2.1. Foliar Plant Diseases Caused by Oomycetes . . . . .	390
2.2. Soilborne Seedling and Root Diseases Caused by Oomycetes . . . . .	394
3. Traditional Control of Oomycetes by Nonsystemic Fungicides . . . . .	395
4. Chemistry and Biological Properties of Systemic and Specific Fungicides Against Oomycetes . . . . .	397
4.1. Earlier Fungicides with Specific Activity Against Oomycetes . . . . .	397
4.1.1. Fenaminosulf . . . . .	397
4.1.2. Etridiazole . . . . .	397

4.1.3. Chloroneb . . . . .	398
4.1.4. Hymexazol and Related Compounds . . . . .	399
4.2. Pyroxychlor and Other Pyridines . . . . .	401
4.3. Prothiocarb and Propamocarb . . . . .	403
4.4. Curzate . . . . .	405
4.5. Ethyl Phosphites . . . . .	407
4.6. Acylalanines and Related Compounds . . . . .	410
4.7. Miscellaneous New Fungicides Against Oomycetes . . . . .	414
5. Discussion of Disease Control Strategies with the New Systemic Fungicides Against Oomycetes . . . . .	414
5.1. Novel Disease Control Possibilities with Systemic Fungicides . . . . .	414
5.2. Utilization of Curative and Systemic Properties for Integrated Disease Control Strategies . . . . .	415
5.3. The Risk of Fungicide Resistance . . . . .	415
6. References . . . . .	416

## **Benzoylphenylurea Insecticides**

*W. Maas, R. van Hes, A. C. Grosscurt and D. H. Deul*

1. Introduction . . . . .	424
2. Synthesis of 1-benzoyl-3-phenylureas . . . . .	425
3. Diflubenzuron, Physical/Chemical Properties and Analysis . . . . .	426
3.1. Physical and Chemical Properties . . . . .	427
3.2. Analysis . . . . .	427
4. Formulations . . . . .	427
5. Toxicology . . . . .	429
5.1. Mammalian Toxicity . . . . .	429
5.1.1. Acute Toxicity . . . . .	429
5.1.2. Sub-acute Toxicity . . . . .	430
5.1.3. Semi-chronic Toxicity . . . . .	430
5.1.4. Chronic Toxicity . . . . .	430
5.1.5. Special Studies . . . . .	430
5.2. Toxicity to Birds . . . . .	431
5.3. Toxicity to Fish . . . . .	431
6. Mode of Action . . . . .	432
6.1. Biological Aspects . . . . .	432
6.1.1. Larvicidal Effects . . . . .	432
6.1.2. Ovicidal Effects . . . . .	433
6.1.3. Effects on Adult Insects . . . . .	434
6.2. Biochemical Aspects . . . . .	435
7. Distribution and Metabolism . . . . .	436
7.1. Distribution and Degradation of Diflubenzuron in Soil and Water . . . . .	437
7.2. Plants and Other Organic Matrices . . . . .	439
7.3. Animal Metabolism . . . . .	440
7.4. Metabolism in Insects . . . . .	440
7.5. Behaviour in Ecosystems . . . . .	442
7.6. Residues . . . . .	443
7.6.1. Plant Residues . . . . .	443
7.6.2. Residues in Animal Tissues . . . . .	444
7.6.3. Residues in Mushrooms . . . . .	446
8. Fields of Application . . . . .	446
8.1. Introduction: Selectivity . . . . .	446
8.2. Agricultural Crops . . . . .	447
8.2.1. Cotton . . . . .	447
8.2.2. Soybeans . . . . .	449
8.2.3. Corn . . . . .	449

## Inhaltsverzeichnis

8.3. Horticultural Crops . . . . .	449
8.3.1. Fruit Crops . . . . .	449
8.3.2. Mushrooms . . . . .	451
8.3.3. Floriculture . . . . .	451
8.3.4. Cabbage . . . . .	451
8.4. Forestry and Woody Ornamentals . . . . .	451
8.5. Medical-hygienic and Veterinary Applications, Including Control of Nuisance Insects . . . . .	453
8.5.1. Mosquitoes and Midges . . . . .	453
8.5.2. Flies . . . . .	454
8.5.3. Blackflies . . . . .	455
8.5.4. Tsetse Flies . . . . .	455
8.5.5. Chewing Lice . . . . .	455
8.6. Effects on Non-targets, not Related to a Specific Field of Application . . . . .	455
8.6.1. Honey Bees . . . . .	455
8.6.2. Non-target Aquatic Organisms . . . . .	456
8.7. Nematicidal Effects . . . . .	457
9. Resistance . . . . .	458
9.1. Cross Resistance . . . . .	458
9.2. Build-up of Resistance Against Diflubenzuron . . . . .	459
10. Structure-Activity Relationship . . . . .	460
11. Experimental Products . . . . .	462
11.1. Experimental Compounds of Bayer AG . . . . .	462
11.2. Experimental Compounds of Eli Lilly . . . . .	463
11.3. Experimental Compound of Philips-Duphar . . . . .	464
12. Literature and Patents . . . . .	464

## Zur Problematik des biologischen Pflanzenschutzes in der Landwirtschaft

*H. H. Cramer und B. Zeller*

1. Problemstellung und Abgrenzung . . . . .	471
2. Problemumfang . . . . .	472
3. Praktische Aussichten der biologischen Unkrautbekämpfung . . . . .	474
4. Praktische Aussichten der biologischen Bekämpfung von Schadpilzen . . . . .	476
5. Biologische Bekämpfung von Insekten und anderen tierischen Schädlingen . . . . .	476
5.1. Verschleppte Schädlinge . . . . .	476
5.2. Autochthone Schädlinge . . . . .	479
5.3. Methoden der biologischen Schädlingsbekämpfung . . . . .	481
5.3.1. Die Verwendung von Parasiten . . . . .	481
5.3.2. Die Verwendung von Prädatoren . . . . .	485
5.3.3. Die Verwendung von Mikroorganismen . . . . .	486
5.3.4. Autozidverfahren . . . . .	488
6. Nebenwirkungen und Gesichtspunkte der amtlichen Zulassung . . . . .	489
7. Diskussion . . . . .	493
8. Schlußbetrachtung . . . . .	497
9. Literatur . . . . .	497

<b>Sachverzeichnis . . . . .</b>	<b>501</b>
