

Contents of Part A

I. Theoretical and Biophysical Approaches

1. The Structure of Biological Membranes (with 4 Figures)	
N.A. WALKER	3
1. Introduction	3
2. The Lipid-Protein Sandwich	4
3. The Liquid Amphiphilic Layer	5
2. Water Relations of Plant Cells (with 6 Figures)	
J. DAINTY	12
1. Introduction	12
2. Water Potential	12
3. The "Static" Water Relations of a Single Plant Cell	16
4. Transport of Water across Cell Membranes	22
5. Conclusion	32
3. Membrane Transport: Theoretical Background (with 2 Figures)	
N.A. WALKER	36
1. Introduction	36
2. Origins of Equations	37
3. Equilibrium Equations (Class A)	37
4. Rate Equations (Class A: Mechanism—Independent)	42
5. Rate Equations (Class B: Mechanism—Dependent)	46
4. Electrical Properties of Plant Cells: Methods and Findings (with 9 Figures) G.P. FINDLAY and A.B. HOPE	53
1. Methods	53
1.1 The Potential Difference	53
1.2 What an Inserted Microelectrode Actually Measures	57
1.3 Measurement of Membrane Resistance	59
1.4 The Control of Membrane Potential Difference by Voltage Clamping	62
1.5 Electrical Capacitance of Membranes	63
2. Electrical Properties of Cells—A Perspective	66
2.1 Potential Difference	66
2.2 Conductance	68

2.3	Membrane Capacitance	70
2.4	The Action Potential	70
2.5	Testing for Active and Passive Transport	77
2.6	Electrogenic Effects—the PD as a Function of Metabolic Activity	78
2.7	Electrical Properties and Membrane Structure	80
2.8	Unusual Measurements	82
2.9	Effects of Uncouplers and Antibiotics	84
2.10	Visible, UV and Ionizing Radiations	85
5.	Measurement of Fluxes across Membranes (with 19 Figures) N.A. WALKER and M.G. PITMAN	93
1.	Introduction	93
2.	Theoretical Basis of Flux Estimation	94
3.	The Effect of the Free Space on Flux Measurements	103
4.	Practical Estimation of Fluxes from Tracer Elution Measurements	107
5.	Applications of Flux Analysis	112
6.	Conclusions	124
II. Particular Cell Systems		
6.	Transport in Algal Cells (with 8 Figures) J.A. RAVEN	129
1.	Introduction	129
2.	Algal Structure in Relation to Transport	129
3.	Elemental Composition of Algae	131
4.	Experimental Materials and Methods	134
5.	Electrochemical Driving Forces in Algal Cells and Ionic Contents	140
6.	Fluxes of Electrolytes	149
7.	Transport of Non-Electrolytes	170
8.	Conclusions and Evolutionary Speculations	173
7.	Transport in Fungal Cells (with 13 Figures) D.H. JENNINGS	189
1.	Introduction	189
2.	Potassium-Hydrogen or -Sodium Exchange System: <i>Neurospora crassa</i> and <i>Saccharomyces cerevisiae</i>	189
3.	Ammonium and Methyl Ammonium Transport	203
4.	Bivalent Cation Transport: <i>Saccharomyces cerevisiae</i>	204
5.	Phosphate Transport	206
6.	Transport of Sulfate and Other Sulfur Compounds	208
7.	Amino Acid Transport	208
8.	Monosaccharide Transport	214
9.	Uptake of Di- and Trisaccharides	219
10.	Ion and Proton Movements Accompanying Organic Solute Absorption	220

8. Transport in Cells of Storage Tissues (with 4 Figures)
 R.J. POOLE 229

1. Introduction 229

2. Material 230

3. Red Beet (*Beta vulgaris* L.) 234

4. Carrot (*Daucus carota* L.) 240

5. Potato (*Solanum tuberosum* L.) 243

6. Conclusion 244

III. Regulation, Metabolism and Transport

9. Transport and Energy (with 1 Figure)
 U. LÜTTGE and M.G. PITMAN 251

1. Introduction 251

2. Particular Energy Source for Particular Transport Mechanism 252

3. Coupling between Sources of Metabolic Energy and Transport Mechanisms 253

4. Energy Requirement for Ion Transport 256

10. ATPases Associated with Membranes of Plant Cells (with 10 Figures)
 T.K. HODGES 260

1. Introduction 260

2. Difficulties in Establishing a Role for ATPases in Ion Transport 261

3. ATPase Activity of Soluble Fractions 262

4. ATPase Activity of Membrane Fractions 263

5. Evidence for ATPase Involvement in Cation Absorption by Roots 278

6. Summary 281

11. Negative Feedback Regulation of Transport in Cells. The Maintenance of Turgor, Volume and Nutrient Supply (with 5 Figures)
 W.J. CRAM 284

1. Introduction 284

2. Some Elementary Properties of Control Systems 285

3. Experimental Observations 289

3.1 Control of the Total Number of Osmotically Active Particles in Cells 289

3.2 Control of the Uptake and Accumulation of Specific Substances in Plant Cells 302

4. Mechanisms of Negative Feedback Regulation 306

5. Interrelations between Systems Regulating Transport 307

12. H ⁺ Transport and Regulation of Cell pH (with 9 Figures)	
F.A. SMITH and J.A. RAVEN	317
1. Introduction	317
2. Effects of Metabolism on the pH of Cells and Their Surroundings	317
3. Biophysical Implications of H ⁺ Transport	323
4. Models for H ⁺ Transport	326
5. H ⁺ Fluxes and the Regulation of Solute Accumulation	331
6. H ⁺ Transport in Morphogenesis	338
7. Conclusions: the Evolution of H ⁺ Transport	339
13. Ion Absorption and Carbon Metabolism in Cells of Higher Plants (with 7 Figures)	
C.B. OSMOND	347
1. Introduction	347
2. Regulation of Carboxylate Metabolism during Ion Uptake	348
3. Ion Concentration and Enzyme Activity	358
4. Modification of Enzymic Activity and Properties in Relation to Ionic Environment	362
5. Regulation of Internal Ionic Environment; Osmotic and Metabolic Responses	365
6. Conclusions	366
Author Index (Part A)	373
Symbols, Units, and Abbreviations	395
Subject Index (Part A and B) (after p. 400)	I-XIX
