

# Contents

## I. Structural Considerations in Phloem Transport

1. Sieve-Element Structure	
M.V. PARTHASARATHY . . . . .	3
A. Introduction . . . . .	3
B. Terminology, Sieve-Element Size and Shape . . . . .	3
C. Structure of Sieve Elements . . . . .	5
Angiosperms 5 — Gymnosperms 21 — Vascular Cryptogams 24	
D. Longevity of Sieve Elements . . . . .	26
E. Structure of Sieve Elements and Translocation . . . . .	27
Undifferentiated S.E. 27 — S.E. Structure and Possible Mechanisms of Transport 28	
F. Conclusion . . . . .	32
References . . . . .	33
2. Sealing Systems in Phloem	
W. ESCHRICH . . . . .	39
A. Introduction . . . . .	39
B. Callose . . . . .	39
Identification and Distribution 39 — Structure and Properties 41 — Changes of Callose Content 42 — Sieve-Tube Callose in Relation to Transport 45 — Conclusions 47	
C. Sieve-Tube Slime . . . . .	48
General Considerations 48 — Distribution and Origin 48 — Position of Filaments 50 — Conclusions 52	
References . . . . .	52

## II. Nature of Substances in Phloem

3. Nature of Transported Substances	
H. ZIEGLER . . . . .	59
A. Introduction . . . . .	59
B. Methods for the Analysis of the Transported Substances . . . . .	59
C. Different Groups of Transported Substances . . . . .	61
Water 61 — Carbohydrates 63 — Nitrogenous Substances 67 — Lipids 73 — Organic Acids 73 — Constituents and ATP 74 — Growth Substances and Inhibitors 78 — Vitamins 83 — Other Organic Substances 84 — Inorganic Substances 85 — Viruses and Flagellates 91 — Physical Properties of S.T. Exudate 92	

D. Concluding Remarks . . . . .	93
References . . . . .	94
4. Biochemistry of Phloem Constituents	
W. ESCHRICH and W. HEYSER . . . . .	101
A. Introduction . . . . .	101
B. Enzymic Activities in Sieve Tubes . . . . .	102
Sources of S.T. Exudates 102 — Enzymes in S.T. 104	
C. Maintenance of the Living State of Sieve Tubes . . . . .	104
Respiration 104 — Enzymes of Glycolysis and Gluconeogenesis 114	
D. Origin of Enzymes in Sieve Tubes . . . . .	116
E. Biochemical Reactions in Sieve Tubes in Relation to Function . . . . .	118
Enzymes Normally Present 118 — Metabolism of Sucrose and Derivatives 119	
— Nucleic Acids 122 — Synthesis and Breakdown of Callose 124 — P-Protein and Plastids 127	
F. Conclusions . . . . .	130
References . . . . .	132
<b>III. Phloem Transport: Assessment of Evidence</b>	
5. Mass Transfer	
M.J.P. CANNY . . . . .	139
A. Introduction . . . . .	139
B. Methods of Measuring Mass Transfer . . . . .	139
Gain by Fruit Sinks 140 — Loss from Leaf Sources 143 — Transfer through Tree Trunks 144 — Special Systems: Palm Inflorescence 145 — Aphid Stylet 145 — Results of the Measurements 146	
C. Factors Related to Mass Transfer . . . . .	146
Concentration Gradient 146 — Path Distance 148 — Morphology and Patterns of Movement 149 — Flow Models 150 — Speed Components 151	
D. Summary . . . . .	152
References . . . . .	152
6. Aphids and Translocation	
A.F.G. DIXON . . . . .	154
A. Introduction . . . . .	154
B. Distribution of Aphids on Plants and Its Bearing on Translocation 158	
C. Aphid Honeydew as a Source of Information on Substances Translocated in Phloem Elements . . . . .	159
Sterols 159 — Phenols 160 — Minerals 161 — Plant Hormones 162	
D. Growth Efficiency of Aphids . . . . .	162
E. Damage Done to Plants by Aphids . . . . .	163
Galling 163 — Premature Senescence and Death of Plant Tissue 164 — Speed of Response of Plants to Aphid Infestation 165 — Hormonal Changes Induced 165	

F. Aphids as "Sinks" . . . . .	165
G. Aphid Stylets and Phloem Transport . . . . .	166
H. Summary . . . . .	167
References . . . . .	167
7. Investigations with Aphid Stylets into the Physiology of the Sieve Tube	
A.J. PEEL . . . . .	171
A. Introduction . . . . .	171
B. The Aphid Technique as a Method of Obtaining Samples of Sieve-Tube Sap . . . . .	172
Severed Stylets 172 — Whole Aphids 172 — Comparison of Stylet Technique with Incisions 173	
C. Evidence That Exudation from Stylets Involves Longitudinal Transport through the Sieve Tubes . . . . .	174
Experiments with Incisions and Radioactive Tracers 174, 175	
D. The Pattern of Fluxes into and along the Sieve Tube in Relation to Stylet Puncture . . . . .	176
E. Severed Stylets and Aphids as Sinks . . . . .	177
Polarity Initiated by Stylets 178 — Velocity and Specific Mass Transfer of Sucrose in Pierced S.T. 178	
F. The Control of Solute Loading into Sieve Elements . . . . .	179
Potential 179 — Specificity 179 — Metabolism and Loading 181	
G. The Nature of the Longitudinal Movement Produced in Response to Stylet Puncture . . . . .	181
Water Movement 181 — Hydrostatic Pressures in Sieve Tubes 183 — Effect of Hydrostatic Pressure Gradients in Xylem upon Stylet Exudation 184 — Simultaneous Bidirectional Movement 185 — Metabolism and Movement of Solutes 187	
H. Conclusions . . . . .	192
References . . . . .	192
8. Phloem Exudation from Monocotyledonous Axes	
J. VAN DIE and P.M.L. TAMMES . . . . .	196
A. Introduction . . . . .	196
B. Exudation from Wounded Palms and <i>Agaves</i> . . . . .	197
Sugar-Rich Saps 197 — Use of <i>Yucca flaccida</i> 199 — Composition and Nature of Exudates 200	
C. Experimental Analyses of the Exudation Process . . . . .	206
Translocation to the Site of Bleeding 206 — Feeding Detached Inflorescence Axes 211 — Cooling Experiments with <i>Yucca flaccida</i> 212	
D. The Exudation Process and Its Relation to Phloem Transport . . . . .	213
Flow between Source and Artificial Sink 213 — Structure of the Sieve Plate 214 — Concluding Remarks 216	
References . . . . .	218

9. Work with Isolated Phloem Strands	
D.S. FENSOM . . . . .	223
A. Introduction . . . . .	223
B. Studies of Heat-Pulse Movement . . . . .	224
C. Electrical Studies . . . . .	225
D. Light Microscopy of Isolated Phloem Strands . . . . .	228
E. Micro-Injection of Tracers . . . . .	234
F. Feeding Sucrose Solution to Isolated Phloem Strands . . . . .	237
G. Electronmicroscopy of Isolated Strands . . . . .	240
H. Summary . . . . .	243
References . . . . .	243
10. Bidirectional Transport	
W. ESCHRICH . . . . .	245
A. Introduction . . . . .	245
Historical Survey 245 — Aims 245 — Anatomical Aspect 246	
B. Experiments . . . . .	246
Analysis of S.T. between Two Sources 246 — Bidirectional Spreading from a Single Source 249	
C. Bidirectional Transport in Relation to Vascular Differentiation . . . . .	251
Anatomy 251 — Differentiation and Transport 251, 253	
D. Conclusions . . . . .	254
References . . . . .	255
11. Effects of Temperature, Anoxia and Other Metabolic Inhibitors on Translocation	
D.R. GEIGER and S.A. SOVONICK . . . . .	256
A. Introduction . . . . .	256
The Importance of Translocation Modification by Metabolic Inhibitors 256 — Possible Difficulties Encountered in Studying the Effect of Metabolic Inhibitors on Translocation 256	
B. Effects of Temperature, Anoxia and Metabolic Inhibitors on Translocation . . . . .	260
Whole-Plant Experiments 260 — Results of Path, Sink and Source Treatments 261, 272, 276	
C. Significance of Effects of Various Inhibitors . . . . .	278
Relation to Mechanism 278 — Effects on Growth and Productivity 278 — Future Work 281	
D. Summary . . . . .	281
References . . . . .	283

#### **IV. Possible Mechanisms of Phloem Transport**

12. Protoplasmic Streaming	
M.J.P. CANNY . . . . .	289
A. Introduction . . . . .	289
B. The Phenomenon of Streaming . . . . .	290

C. The Fine Structure of Streaming Protoplasm . . . . .	291
D. Chemical Basis of Protoplasmic Streaming . . . . .	292
E. Translocation Models Using the Streaming Properties of Protoplasm	293
Rotation Streaming 293 -- Transcellular Strands 293 -- Peristaltic Pumping 294	
F. The Occurrence of Streaming in Sieve-Element Protoplasm . . . . .	295
G. Structural Components of Sieve Elements That Might be Related to Streaming . . . . .	296
H. Conclusion . . . . .	297
References . . . . .	298
13. Electroosmotic Flow	
D.C. SPANNER . . . . .	301
A. Presuppositions of the Potassium Theory . . . . .	301
B. Electroosmosis as a Phenomenon . . . . .	302
Anomalous Osmosis 304 — Design for an Electroosmotic Pump 304 — A Modified Design 306	
C. Statement of the Theory . . . . .	307
Further Comments 311 — Initiation of Transport 312 — Insertion of P-Protein into Pores 312 — Active Uptake of Potassium 313 — Membrane Expansion 314 — Limitation of Potassium Circulation 314 — Sieve-Element Length 315 — Function of Companion Cells 316	
D. Objections to the Potassium Theory . . . . .	316
E. Further Evidence for the Potassium Theory . . . . .	319
F. Comparison with Other Theories . . . . .	320
Münch Hypothesis 320 -- Contractile Protein Theories 321	
G. Conclusion . . . . .	323
Addendum 1: Hydrodynamic Polarization of Sieve Plate . . . . .	323
Addendum 2: Donnan Equilibrium between Lumen and Pores . . . . .	325
Addendum 3 . . . . .	325
References . . . . .	326
14. Pressure Flow	
J.A. MILBURN . . . . .	328
A. Introduction . . . . .	328
B. Pressure-Flow Systems . . . . .	329
Münch Osmotic Pressure-Flow Models 329 — Intact Plants: Elaboration on Münch Model 329 — Effect of Gravity 332 — Reverse-Osmosis Experiments 333 — Role of Extra-Floral Nectaries 334	
C. Objections to Osmotic Pressure Flow . . . . .	335
Structural Considerations 335 — Bidirectional Transport 337 — Differential Transport 337 — Polarized Flow 338	
D. Observations Supporting Osmotic Pressure Flow . . . . .	338
E. Quantitative Studies on Phloem Transport . . . . .	340
Influence of Water Potential 341 — Sieve-Tube Turgor Pressure and Gradients 342 — S.T. Hydraulic Conductivity from Specific Mass Transfer, Sap Velocity or by Volume Transfer 346, 347, 349	
F. Summary . . . . .	350
References . . . . .	351

15. Other Possible Mechanisms	
D.S. FENSOM	354
A. Introduction	354
B. Peristalsis of Cell Walls	354
C. Micro-Electro-Kinesis	355
D. Surface Active Movement Mechanism	355
E. Reciprocating Flow Hypothesis	357
F. Contractile Proteins	357
G. Concluding Considerations	363
References	365
16. Theoretical Considerations	
M.T. TYREE and J. DAINY	367
A. The Basic Transport Equations	367
Fick's Equations 368 — Localized Membrane Permeation 369 — Laminar Flow Equations 370 — Conservation and Phenomenological Equations 371	
B. Mathematical Models for Mass Flow: Energetics and Forces	372
Münch Model Treated Quantitatively 372 — Peristaltic Pumping Model 378 — Electroosmosis and Transcellular Cyclosis 380	
C. Mathematical Models Treating the Kinetics of Spatial and Temporal Distribution of Labeled Translocate	381
Kinetics of Loading and the Through-Put Component 381, 385	
D. Summary	390
References	391

## V. Phloem Loading: Storage and Circulation

17. Phloem Loading	
D.R. GEIGER	395
A. Introduction	395
Concept of Phloem Loading 395 — Münch Hypothesis and Phloem Loading 395 — Experimental Verification of Phloem Loading 396	
B. Structural Aspects of Phloem Loading	398
Distribution of Minor Veins 398 — Structural Features of Intermediary and Transfer Cells 399 — Close Functional and Structural Association of Sieve Elements and Companion Cells 400	
C. Physiological Aspects of Phloem Loading	400
Involvement of Free Space in Path from Mesophyll to Minor Vein Phloem 400 — Selectivity of Phloem Loading 407 — Mechanism of Phloem Loading 413	
D. Control Aspects of Phloem Loading	419
Production of Osmotic Pressure in Sieve Elements and Companion Cells Generates Motive Force for Translocation 419 — Onset of Export Capacity 421 — Relationship between Photosynthesis and Translocation 422	
E. Summary	424
References	425

18. Radial Transport in Rays  
 W. HÖLL . . . . . 432

    A. Introduction . . . . . 432

    B. Structural Organization of Rays . . . . . 432  
         General 432 — Physiological Differentiation of Rays in Gymnosperms and  
         Dicotyledons 433, 436

    C. Storage in Rays . . . . . 438  
         Stored Material 438 — Seasonal Variations 440

    D. Movement of Assimilates in Rays . . . . . 441  
         General 441 — Loading and Unloading of Rays *via* Strasburger Cells 442  
         — Possible Mechanisms of Radial Transport in Rays 444 — Exchange between  
         Rays and Vessels 445

    E. Summary . . . . . 447

    References . . . . . 448

19. Exchange of Solutes between Phloem and Xylem and Circulation  
 in the Whole Plant  
 J.S. PATE . . . . . 451

    A. Introduction . . . . . 451

    B. Structural Considerations Relating to Phloem-Xylem Exchange of  
     Solute . . . . . 451

    C. Solute Present in the Xylem and Their Origin in the Root . . . . . 455

    D. Exchange of Xylem Solute with the Shoot Axis and Interchange with  
     Shoot Phloem . . . . . 458

    E. Solute Present in the Phloem and Their Origin in Leaves . . . . . 459

    F. Transport to Centers of Growth or Storage in the Shoot . . . . . 462

    G. Solute Transport and Circulation in the Whole Plant . . . . . 464

    H. Summary . . . . . 467
