

Contents Part B

18 Photomorphogenesis and Flowering

D. VINCE-PRUE (With 10 Figures)

1 Introduction: Photoperiodism	457
1.1 Photoperiodic Response Groups	457
1.2 The Site of Daylength Perception	458
1.3 Photoperiodic Induction	459
2 Photoperception: Evidence for Phytochrome Involvement in Photoperiodism	460
3 Phytochrome and Photoperiodic Induction in Short-Day Responses — a Working Hypothesis	463
4 Time Measurement: the Role of Phytochrome	465
4.1 Circadian Rhythms and Photoperiodic Responses	466
4.2 Studies of Phytochrome in Relation to Dark Time Measurement	469
4.3 The Function of Phytochrome During the Photoperiod	472
5 Photoperiodic Induction Under Prolonged Exposures to Light	478
6 The Action of Phytochrome in the Control of Flowering	482
References	484

19 The Function of Phytochrome in Nature

H. SMITH and D.C. MORGAN (With 11 Figures)

1 Introduction	491
2 Phytochrome, the Photoreceptor	491
2.1 Etiolated Tissue	491
2.2 De-Etiolated, Green Tissue	493
2.2.1 Problems	493
2.2.2 Measurement	494
3 Natural Spectra	496
3.1 Daylight	496
3.2 Twilight	496
3.3 Vegetational Shadelight	497
3.4 Phytochrome-Sensitive Spectral Changes	498
4 Phytochrome Modulation of Developmental Processes in Light-Grown Plants	498
4.1 Germination	498
4.2 De-Etiolation	499
4.3 Photomorphogenesis	500
4.4 Photoperiodism	508
5 Concluding Remarks	512
References	513

20 Horticultural Significance of Photomorphogenesis

D. VINCE-PRUE and A.E. CANHAM (With 5 Figures)

1 Introduction	518
2 Seedling Morphogenesis	518
2.1 Artificial Light Sources	520
2.2 Applications	523
3 Plants Grown to Maturity in Artificial Light	524

3.1 Non-Photosynthetic Light	524
3.2 Photosynthetic and Photomorphogenetic Light	525
3.3 Research Applications	526
4 Plants in Natural Light	529
4.1 Seed Germination	530
4.2 Control of Branching	530
4.3 Leaf Senescence	531
5 Photoperiodic Effects	532
5.1 Techniques for the Artificial Control of Daylength	535
References	540

21 Photomorphogenesis of Marine Macroalgae

M.J. DRING and K. LÜNING (With 9 Figures)

1 Introduction	545
2 Natural Light Climate in Benthic Marine Habitats	546
3 Photoperiodism	550
3.1 Effectiveness of a Night-Break	552
3.2 Action Spectra of the Night-Break	553
3.3 Interactions with Temperature, Photoperiodic Ecotypes and Ecological Implications	555
4 Specific Effects of Light Quality on Algal Morphology	557
4.1 Vegetative Development and Light Quality	558
4.1.1 Induction of Polarity in Germinating Zygotes	558
4.1.2 Induction of Two-Dimensional Growth in Sporelings of <i>Scytosiphon</i>	558
4.1.3 Induction of Hair Formation in Brown Algae	560
4.1.4 Long-Term Effects of Red and Blue Light on Photosynthesis and Growth	560
4.1.5 Stipe Elongation in Relation to Red/Far-Red Ratios	561
4.2 Reproductive Development and Light Quality	561
5 Quantum Requirements of Photomorphogenetic Responses in Marine Algae	563
6 Photocontrol of Algal Development in the Sea	564
References	566

22 Photomorphogenesis in Ferns

M. FURUYA (With 8 Figures)

1 Introduction	569
2 Light Effects on Haploid Development	569
2.1 Spore Germination	569
2.1.1 Diverse Photoresponses of Spores in Sample Populations	570
2.1.2 Photochrome-Dependent Germination	571
2.1.3 P _{B-NUV} -Mediated Inhibition and the Dark Recovery Process	573
2.2 Protonemal Growth	574
2.2.1 Light Effects of Growing Tips	574
2.2.2 Dark Cessation and Resumption of Apical Growth	578
2.2.3 Apical Swelling	580
2.2.4 Phototropism and Polarotropism	580
2.3 Cell Division and Cell Cycle	582
2.3.1 Frequency and Timing of Cell Division	582
2.3.2 Characteristics of Component Phases of the Cell Cycle	583
2.3.3 Orientation of the Cell Plate and Two-Dimensional Development	586
2.4 Differentiation and Morphogenesis	587
2.4.1 Vegetative Stage	587
2.4.2 Reproductive Stages	589
3 Light Effects on Diploid Development	590
3.1 Sporophyll Formation	590

3.2 Apogamy	591
4 Modes of Light Action	591
4.1 Photoreceptor Pigments	591
4.2 Effector Systems	592
5 Achievements and Failures in the Study of Fern Photomorphogenesis	593
References	594

Selected Further Topics

23 Photocontrol of Fungal Development

J. GRESSEL and W. RAU (With 11 Figures)

1 Introduction	603
2 Response Systems	603
2.1 Sporulating Organisms	603
2.1.1 <i>Phycomyces</i>	603
2.1.2 <i>Neurospora</i> and <i>Trichoderma</i>	604
2.1.3 Mushrooms	604
2.2 Pigmentation	606
3 Photoreceptor Systems	607
3.1 Ultraviolet (UV)	608
3.2 Near-Ultraviolet (NUV)	608
3.3 Blue Light	608
3.3.1 Cryptochrome	608
3.3.2 Mycochrome	610
3.4 Porphyrins	613
3.5 Multitude of Acceptors in Slime Molds	613
3.6 Red Light and Phytochrome	613
4 Photoperception	614
4.1 The Cryptochromal Photoact	614
4.1.1 Cryptochrome Replacement by Photodynamic Dyes	617
4.2 Photoreceptor Localization	617
4.3 Natural and Exogenous Photomimetic Agents	619
4.3.1 The Photoperceiving Sporogen of <i>Physarum</i>	619
4.3.2 P-310 of UV-Induced Fungi	619
4.3.3 Other Photomimetic Agents	620
4.3.4 Agents Reversing Light Suppression of Sporulation	621
5 Stress and Photodevelopment	621
5.1 Light-Induced Stress	621
5.2 Metabolism and Membranes Entraining Rhythms and Development	622
5.3 Carbohydrate Metabolism, Light Stress and Sporulation	622
5.4 Nitrogen Metabolism and Photomodulated Growth	623
6 First Responses to Light	624
6.1 Transcription/Translation	624
6.2 The Photoregulatory Level in Carotenogenesis	626
6.3 Cyclic AMP and Reproductive Development	627
7 Genetics of Morphogenesis	628
7.1 <i>Phycomyces</i>	629
7.2 <i>Trichoderma</i>	631
References	632

24 The Photoregulation of Anthocyanin Synthesis

A.L. MANCINELLI (With 3 Figures)

1 Introduction	640
2 General Characteristics of the Action of Light on Anthocyanin Synthesis	641
3 Anthocyanin Production Under Inductive Conditions	641

4 Anthocyanin Production Under Prolonged Light Treatments	643
4.1 Time and Fluence Rate Dependence of Anthocyanin Production Under Continuous Irradiation	643
4.2 Reciprocity Failure of Anthocyanin Production Under Continuous Irradiation	644
4.3 The Spectral Sensitivity of Anthocyanin Production Under Continuous Irradiation	646
4.4 The Nature of the Photoreceptors Involved in the Photoregulation of An- thocyanin Production Under Continuous Irradiation	649
5 Photoregulation of the Activities of the Enzymes of the Flavonoid Biosynthetic Pathway	655
References	656

25 Light Control of Chlorophyll Accumulation in Higher Plants

H. KASEMIR (With 6 Figures)

1 Introduction	662
1.1 Terminological Remarks	662
1.2 The Regulatory Photoreceptors	662
2 Stages of Chl(ide) Accumulation in Continuous Light	663
2.1 PChl(ide) Photoreduction	664
2.2 The Transition Phase	666
2.3 The Phase of Steady-State Chl(ide) Accumulation	667
3 Phytochrome Action on Chl(ide) Biosynthesis	668
3.1 Phytochrome Action on the Formation of ALA and the Activity of ALA Dehydratase	668
3.2 Phytochrome Action on the Esterification of Chl(ide)-a	670
3.3 Phytochrome Action on Chl(ide)-b Accumulation	671
4 Phytochrome Action on the Stabilisation of Chl(ide) in Light	672
4.1 Phytochrome Action on the Shibata Shift	672
4.2 Phytochrome Action on the Formation of Acceptor Proteins for Chl(ide)	673
4.3 Coordinated Formation of Chl(ide) and Prenyllipids	674
5 Phytochrome Action on the Lability of Chl(ide) in Darkness	675
5.1 Chl(ide) Accumulation in Intermittent Light	675
5.2 Phytochrome Delays Chl(ide) Degradation During Prolonged Darkness	677
References	677

26 Developmental Significance of Light-Mediated Electrical Responses in Plant Tissue

R.H. RACUSEN and A.W. GALSTON

1 Electrical Signals in Photoresponsive Plant Tissue	687
2 Types of Electrical Measurements and Their Significance	688
2.1 Transmembrane Electrical Potentials	688
2.2 Membrane Resistance	689
2.3 Electrical Coupling Between Cells	689
2.4 Surface Potentials	689
2.5 Fixed Charges	690
3 Bioelectric Charges Associated with Phytochrome	690
3.1 Surface Manifestations of Electrical Charges	690
3.2 Intracellular Electrical Responses	692
4 Electrical Responses to Blue Light	693
5 Do Rapid Electrical Responses Reflect Photomorphogenetic Events?	694
5.1 The Signal	695
5.2 The Effector	695
5.3 The Cellular Control Mechanism	696
6 Exploring the Mechanism of Photomorphogenesis	696
7 Conclusion	700
References	700

27 Phytochrome in Light-Grown Plants

M. JABBEN and M.G. HOLMES (With 7 Figures)

1 Growth Responses in Light-Grown Plants	704
1.1 End-of-Day Responses	705
1.2 Continuous Light Responses	706
1.3 Pulsed Light Responses	708
1.4 Fluence Rate Dependency	709
2 Properties of Phytochrome in Light-Grown Plants	710
2.1 Phytochrome Levels and Location	711
2.2 Spectral Properties	711
2.3 Thermal Reactions	712
2.3.1 Biosynthesis of Phytochrome	713
2.3.2 P _{fr} Destruction	714
2.3.3 P _r Destruction	715
2.3.4 Dark Reversion	716
2.4 The Phytochrome System in Dark- and Light-Grown Plants	716
3 The Active Form of Phytochrome in Light-Grown Plants	718
References	719

28 Blue-Light Effects in Phytochrome-Mediated Responses

E. SCHÄFER and W. HAUPT (With 6 Figures)

1 Introduction	723
2 Action of Blue and Red Light in <i>Mougeotia</i>	725
3 Action of Blue and Red Light in Fern Chloronemata	727
3.1 Apical Growth	727
3.2 Apical Swelling	727
3.3 Morphogenic Index	728
3.4 Polarotropism	729
3.5 Conclusion	731
4 Action of Blue and Red Light in Higher Plants	732
4.1 Criteria for Cryptochrome Involvement in Morphogenesis	732
4.2 Anthocyanin or Betalain Formation	735
4.3 Growth Responses in <i>Sinapis alba</i>	739
4.4 Phototropism and Photomorphogenesis in Higher Plants	740
References	741

29 UV Radiation in Photomorphogenesis

E. WELLMANN (With 1 Figure)

1 UV Radiation: Definitions, Characteristics and General Effects	745
2 UV Effects on Morphogenesis	747
2.1 UV Photoreceptors and Action Spectra	747
2.2 Effectiveness of UV-A Within the Framework of General Photomorphogenesis	748
2.3 Specific UV-B Effects	748
2.3.1 Damaging and Non-Damaging Effects	748
2.3.2 Effects on Metabolism	750
2.3.3 Growth Effects	751
2.4 Dependence of UV-B Effectiveness on the Presence of Longer Wavelength Light	752
2.4.1 Control by Phytochrome	752
2.4.2 Synergistic Effects with Blue/UV-A Light	753
3 Perspective for the Future	753
References	754

Appendix I: List of General Abbreviations	757
Appendix II: Units	758
Appendix III: Description of Light Fields Used in Research on Photomorphogenesis H. MOHR, E. SCHÄFER, and W. SHROPSHIRE	761
Author Index	765
Subject Index	821
