

Contents Part A

Introduction

A. LÄUCHLI and R.L. BIELESKI	1
----------------------------------------	---

I. General Chapters of Inorganic Plant Nutrition

I.1 General Introduction to the Mineral Nutrition of Plants

H. MARSCHNER (With 11 Figures)

1 Introduction and Historical Résumé	5
1.1 Essential Mineral Elements – Plant Nutrients	5
1.2 Function of Essential Mineral Elements	6
1.3 Beneficial Mineral Elements	7
1.4 Recent Developments	9
1.4.1 Calcium	10
1.4.2 Potassium	11
1.4.3 Phosphorus	13
1.4.4 Nitrogen	13
1.4.5 Copper	14
1.4.6 Chlorine	15
2 Uptake and Long-Distance Transport of Mineral Elements	16
2.1 Ion Concentration at the Root Surface, Role of the “Rhizosphere”	16
2.2 Long-Distance Transport in the Xylem	18
2.2.1 From the Roots to the Shoot	18
2.2.2 Into Fruits, Seeds and Storage Organs	19
2.2.3 Retranslocation of Mineral Elements from Leaves	20
3 Calcium Nutrition of Higher Plants	22
3.1 Introduction	22
3.2 Calcium Demand of Higher Plants	22
3.3 Calcium Uptake by the Roots	23
3.4 Long-Distance Transport of Calcium	23
3.4.1 Xylem Transport	23
3.4.2 Phloem Transport	26
3.4.3 Xylem Versus Phloem Transport	27
3.5 Role of Phytohormones and Growth Regulators	29
3.6 Conclusion and Outlook	29
4 Mineral Nutrition and Physiology of Yield Formation – Sink-Source Relationship	30
4.1 Introduction	30
4.2 Effect of Mineral Nutrition on Phytohormone Level and Sink Formation	31
4.3 Effect of Mineral Nutrients on Fertilization	33
4.4 Source-Sink Interactions in Relation to Mineral Nutrition	34
5 Environmental Aspects of Mineral Nutrition	37
5.1 Introduction	37
5.1.1 Nitrogen	38
5.1.2 Heavy Metals	39

5.2 Heavy Metal Toxicity	39
5.3 Heavy Metals in the Food Chain	40
5.4 Heavy Metals in the Soil/Plant System	41
5.4.1 Content of Soils	41
5.4.2 Soil Factors Affecting Heavy Metal Accumulation in Plants	43
5.4.3 Genotypic Differences in Heavy Metal Uptake	44
5.4.4 Distribution Within the Plants and Their Organs	46
5.4.5 Heavy Metal Tolerance	48
5.5 Concluding Remarks	49
References	49

I.2 The Significance of Rhizosphere Microflora and Mycorrhizas in Plant Nutrition

A.D. ROVIRA, G.D. BOWEN, and R.C. FOSTER (With 7 Figures)

1 Introduction	61
2 Energy Supplies in the Rhizosphere	61
2.1 Exudates	61
2.2 Secretions	62
2.3 Plant Mucilages	62
2.4 Mucigel	63
2.5 Lysates	63
3 Microbiology of the Rhizosphere	64
3.1 Populations of Micro-Organisms	64
3.2 Colonization of Roots by Micro-Organisms	64
4 Mathematical Modelling of the Rhizosphere	65
5 Microscopy of the Rhizosphere	66
5.1 Light Microscopy	66
5.2 Scanning Electron Microscopy (S.E.M.)	66
5.3 Transmission Electron Microscopy (T.E.M.)	69
5.3.1 General Description	69
5.3.2 Origin and Fine Structure of Root Mucilage	70
5.3.3 Microbial Invasion of the Mucilage and the Formation of Mucigel	72
5.3.4 Functions of Root Mucilage and Mucigel	72
5.3.5 The Outer Rhizosphere	72
5.3.6 Invasion of the Root by Microorganisms	73
6 The Role of Rhizosphere Microorganisms in Plant Nutrition	73
6.1 Availability of Nutrients	74
6.1.1 Nutrient Release and Immobilization	74
6.1.2 Nitrification and Denitrification	74
6.1.3 Nitrogen Fixation	74
6.1.4 Phosphate Availability	74
6.1.5 Minor Nutrients	74
6.2 Growth and Morphology of Roots	75
6.2.1 Root Length and Root Hairs	75
6.2.2 Proteoid Roots	75
6.3 Nutrient Uptake Processes	76
6.4 Physiology and Development	76
7 Mycorrhizas	76
7.1 Plant Responses to Infection	78
7.2 Mechanisms of the Response	79
7.2.1 Nutrient Availability	80
7.2.2 Absorption Characteristics of the Root	80
7.2.3 Absorption by the Fungus Component	80
7.3 Energy Requirements of Mycorrhizas	82
7.4 Overview of Mycorrhizas	83

8 General Conclusions	84
References	86

I.3 Modern Solution Culture Techniques

C.J. ASHER and D.G. EDWARDS (With 3 Figures)

1 Major Differences Between Solution Culture and Soil Culture	94
1.1 Mechanical Support	94
1.2 Spatial Variation in Root Environment Parameters	95
1.3 Temporal Variation in Root Environment Parameters	97
1.3.1 Nutrient Depletion	97
1.3.2 pH Shifts	98
1.4 Root-Microorganism Interactions	98
2 Uses and Limitations of Existing Solution Culture Methods	99
2.1 Non-Renewed or Intermittently Renewed Water Cultures and Sand Cultures	99
2.1.1 Use in Teaching, Demonstration, and Diagnosis	99
2.1.2 Production of Roots for Ion Transport Studies	101
2.1.3 Nutrient Essentiality	101
2.1.4 Effects of Root Environment Parameters	101
2.1.5 Establishment of Critical Tissue Concentrations	105
2.1.6 Control of Plant Nutrient Status	105
2.1.7 Study of Symbiotic Associations with Microorganisms	106
2.1.8 Commercial Crop Production	108
2.2 Mist Culture	108
2.3 Flowing Solution Culture	109
2.3.1 The Flow Rate Problem	109
2.3.2 Composition of Flowing Culture Solutions	110
2.3.3 Research Applications	111
2.3.4 Likely Future Developments	113
2.3.5 Commercial Crop Production	114
3 Summary and Conclusions	115
References	115

I.4 Diagnosis of Mineral Deficiencies Using Plant Tests

D. BOUMA (With 5 Figures)

1 Introduction	120
2 Plant Analysis	121
2.1 Physiological Basis	121
2.2 Choice of Tissue	123
2.3 Factors Affecting the Relationship Between Nutrient Concentration and Yield	124
2.3.1 Plant Development	124
2.3.2 Effects of Changes in Age of Tissue	125
2.3.3 Plant Age and Critical Levels	126
2.3.4 Interactions Between Nutrient Elements	127
2.3.5 Environmental Factors	128
2.3.6 Other Factors Affecting Nutrient Composition	130
3 Physiological and Biochemical Approaches to Diagnosis	131
3.1 Introductory Remarks	131
3.2 Physiological Approaches	131
3.2.1 Physiological Assessment	131
3.2.2 Nutrient Stress	132
3.2.3 Approaches Based on Photosynthesis	132
3.2.4 Other Approaches	133

3.3 Biochemical Approaches	135
3.3.1 Nitrogen and Molybdenum	135
3.3.2 Phosphorus	136
3.3.3 Potassium and Magnesium	137
3.3.4 Iron and Manganese	138
3.3.5 Copper	139
3.3.6 Zinc	140
4 Prospects for the Future	140
References	141
I.5 Interactions Between Nutrients in Higher Plants	
A.D. ROBSON and M.G. PITMAN (With 9 Figures)	
1 Introduction	147
2 Interactions Between Nutrients in Monoculture	152
2.1 Interactions Between Nutrients Affecting the Absorption of Nutrients	152
2.1.1 Interactions Occurring in the Soil	152
2.1.2 Absorption from Solution at the Root Surface	156
2.2 Interactions Between Nutrients Affecting the Utilization of Nutrients	160
Within the Plant	160
2.2.1 Distribution	161
2.2.2 Function	164
2.3 Complex Interactions Between Nutrients Involving Several Processes	167
2.3.1 Calcium/Aluminium/Phosphate	167
2.3.2 Zinc/Phosphate	169
3 Interactions Between Nutrients in Mixed Communities	170
4 Conclusion	173
References	173
I.6 Import and Export of Mineral Nutrients in Plant Roots	
U. LÜTTGE (With 10 Figures)	
1 Introduction: The Dual Role of Roots in the Evolution of Higher Land Plants	181
2 Relations Between Structure and Transport Functions Along the Length of Roots	182
2.1 The Phenomenon of Variations in Transport Functions Along the Length of Roots	182
2.2 Structure-Function Relations in Various Root Zones	183
2.2.1 The Root Surface	183
2.2.2 The Cortex	189
2.2.3 The Endodermis	190
2.2.4 The Stele	193
3 Variations of Physiological Activities Along the Length of Roots	199
3.1 Growth, Differentiation and Hormonal Gradients	199
3.2 Bioelectrical Fields Along Roots	200
3.3 Differences in Ion Transport Mechanisms Along Roots	201
4 Root-Shoot Interactions and Circulation in the Whole Plant	202
4.1 Some Examples Illustrating General Aspects of Circulation	202
4.2 Nitrogen, Sulphur and Phosphorus	203
5 Conclusion	204
References	204
I.7 Cycling of Elements in the Biosphere	
C.C. DELWICHE (With 5 Figures)	
1 The Sources of Plant Constituents	212
1.1 Soil and Atmospheric Sources	212
1.2 The Weathering Process	212

2	The Nature of Cycles	214
2.1	The Hydrologic Cycle	214
2.2	The Sedimentary Cycle	215
2.3	The Magmatic Cycle	217
2.4	The Geobiological Cycles	217
3	The Nitrogen Cycle	219
3.1	Overall Cycle Features	219
3.2	Nitrification	221
3.3	Denitrification	222
3.4	Nitrogen Fixation	223
3.5	Human Influences	224
4	The Sulfur Cycle	225
4.1	Comparison with the Nitrogen Cycle	225
4.2	Microbial Oxidation	227
4.3	Sulfate Reduction	227
4.4	Patterns of Sulfur Movement	228
4.5	Human Influences	228
5	The Phosphorus Cycle	229
5.1	Oxidation and Reduction	229
5.2	Movement and Transport in the Biosphere	230
5.3	Human Influences	231
6	Other Elements	232
6.1	Biological Cycling	232
6.2	The Special Significance of Iron and Aluminum	232
6.3	Hydrogen Ion	233
6.4	Characteristics of Sediments	234
6.5	Passive Cycling	235
6.6	Possibilities of Deficiency	235
7	“Open” Versus “Closed” Agricultural Systems	236
	References	237

II. Inorganic Nitrogen Nutrition

II.1 Physiology, Biochemistry and Genetics of Dinitrogen Fixation

H. BOTHE, M.G. YATES, and F.C. CANNON (With 3 Figures)

1	The Nitrogen-Fixing Organisms and the Nitrogenase Reactions	241
1.1	Introduction	241
1.2	Nitrogen Fixation by Free-Living Organisms	244
1.3	Symbiotic Nitrogen Fixation	245
1.4	Substrates of Nitrogenase	247
2	Biochemistry of Nitrogen Fixation	248
2.1	Introduction	248
2.2	Nomenclature of Nitrogenase Proteins	249
2.3	Physicochemical Properties of Nitrogenase Proteins	249
2.4	Metal Clusters in Nitrogenase Proteins	251
2.5	EPR and Mössbauer Spectroscopy on the MoFe Protein	252
2.6	The FeMo Cofactor and the Fe Protein	253
2.7	Nitrogenase Proteins in Photosynthetic Organisms	254
2.8	The Mechanism of Nitrogenase Activity	254
2.8.1	The Roles of the Two Proteins	255
2.8.2	Evidence for Interaction of MgATP and MgADP with the MoFe Protein	257
2.8.3	The Nature of the Active Site(s)	257
2.8.4	Pathways of N_2 -Reduction	258
3	Electron Transport to Nitrogenase	259
3.1	Introduction	259
3.2	Ferredoxins	260

3.3 Flavodoxins	260
3.4 Electron Donors	261
4 Mechanisms to Protect Nitrogenase Against Damage by Oxygen	263
4.1 In Free-Living Organisms	263
4.2 The Heterocysts of Blue-Green Algae	264
4.3 The Role of Leghaemoglobin in Legume Nodules	265
5 Regulation of Nitrogenase Activity and Biosynthesis	265
5.1 Regulation of Nitrogenase Biosynthesis	265
5.2 Regulation of Nitrogenase Activity	267
6 The Hydrogenase-Nitrogenase Relationship	268
7 The Molecular and Genetic Characterization of Nitrogen Fixation Genes	271
7.1 Introduction	271
7.2 The <i>nif</i> Genes	272
7.3 <i>nif</i> Gene Products	273
7.4 Cloning of <i>K. pneumoniae nif</i> Genes	274
7.5 A Physical Map of <i>nif</i> Genes	275
7.6 Interspecies Homology of Nitrogenase Genes	276
References	276

II.2 Dinitrogen-Fixing Symbioses with Legumes, Non-Legume Angiosperms and Associative Symbioses

A. QUISP (With 7 Figures)

1 Introduction	286
2 Description of the Main Symbiotic Dinitrogen-Fixing Systems	287
2.1 Associative Symbioses	287
2.2 Symbioses with Cyanobacteria	287
2.2.1 Distribution	287
2.2.2 Description and Development	287
2.2.3 N ₂ Fixation (C ₂ H ₂ Reduction)	288
2.3 Root Nodules with Actinomycetes: Actinorhizas	288
2.3.1 Distribution	288
2.3.2 Description	289
2.3.3 Infection and Development	291
2.3.4 N ₂ Fixation (C ₂ H ₂ Reduction)	291
2.4 Leguminous Root Nodules with <i>Rhizobium</i>	291
2.4.1 Distribution	291
2.4.2 Description	291
2.4.3 Infection and Nodule Development	292
2.4.4 N ₂ Fixation (C ₂ H ₂ Reduction)	295
2.5 Non-Leguminous Root Nodules with <i>Rhizobium</i>	295
3 The Dinitrogen-Fixing Micro-Symbionts: Isolates and Cultures	295
3.1 Introduction	295
3.2 Cyanobacteria	296
3.3 Frankia, the Endophyte from the Actinorhizas	297
3.3.1 Isolation and Cultivation	297
3.3.2 Specificity	298
3.3.3 Nutrient Requirements	298
3.3.4 Metabolic Activities	299
3.4 <i>Rhizobium</i>	299
3.4.1 Isolation and Description	299
3.4.2 Taxonomy	300
3.4.3 Metabolism	300
3.4.4 N ₂ Fixation (C ₂ H ₂ Reduction)	302
3.4.5 Genetics	303
4 Symbiotic Relations	304
4.1 Chemotaxis and Rhizosphere Accumulation	304
4.2 Binding of <i>Rhizobium</i> to Root Hairs	305

4.3 Root Hair Deformation and Infection-Thread Formation	307
4.4 Cell Wall Degrading Enzymes	307
4.5 The Role of Plant Hormones in Nodule Formation	308
4.6 Miscellaneous Problems	310
5 The N ₂ -Fixing System	311
5.1 Introduction	311
5.2 Bacteroids	312
5.3 The Bacteroid-Containing Plant Cells	314
5.4 Nitrogenase	315
5.5 NH ₃ Assimilation	315
5.6 Oxygen Regulation and Leghaemoglobin	317
5.7 Hydrogen Production and Hydrogen Uptake	318
6 Root Nodules as Part of the Whole Plant	319
7 Concluding Remarks	323
References	323

II.3 Dinitrogen Fixation in Rhizosphere and Phyllosphere Associations

J. DÖBEREINER (With 2 Figures)

1 Introduction	330
2 Characterization of Rhizocoenoses	330
2.1 Sugar Cane – <i>Beijerinckia</i>	331
2.2 <i>Paspalum notatum</i> – <i>Azotobacter paspali</i>	332
2.3 <i>Azospirillum</i> Rhizocoenoses	332
2.3.1 Taxonomy of <i>Azospirillum</i> spp.	333
2.3.2 Root Infection	334
2.3.3 Host Plant Specificity	336
2.3.4 Physiology of <i>Azospirillum</i>	337
2.4 Associations with Other N ₂ -Fixing Bacteria	340
3 Agronomic Aspects	341
3.1 Plant Genotype Effects	341
3.2 Environmental Effects	342
3.3 Inoculation	342
4 Phyllosphere Associations	343
4.1 Microorganisms in the Phyllosphere	344
4.2 Nitrogen Fixation in the Phyllosphere	344
5 General Conclusion	344
References	345

II.4 Uptake and Reduction of Nitrate: Bacteria and Higher Plants

L. BEEVERS and R.H. HAGEMAN

1 Introduction	351
2 Available Nitrogen Sources	352
2.1 Species Differences in Ammonium and Nitrate Utilization	352
2.2 Influence of Ammonium or Nitrate on Cation Uptake	353
2.3 Nitrate Uptake	354
2.4 Influence of Ammonium on Nitrate Uptake and Utilization	355
3 Nitrate Reduction	356
3.1 Bacteria	356
3.2 Dissimilatory Nitrate Reductase	356
3.3 Assimilatory Nitrate Reduction in Bacteria	358
3.4 Characterization of Nitrate Reductase from Higher Plants	358
4 Molybdenum in Nitrate Reduction	360
5 Nitrite Reduction	361
5.1 Assimilatory Bacteria	361
5.2 Dissimilatory Bacteria	361
5.3 Nitrite Reductase in Plants	361

6	Location of Enzymes of Nitrate Assimilation in Higher Plants	363
7	Provision of Reductant for Nitrate Assimilation in Higher Plants	363
8	Regulation of Nitrate Reductase in Higher Plants	364
8.1	Substrate	364
8.2	Hormonal	365
8.3	Molybdenum	365
8.4	Ammonium	366
8.5	Light	366
8.6	Genetic	366
8.7	In Vivo Controls	367
9	Concluding Thoughts	368
	References	369

II.5 Uptake and Reduction of Nitrate: Algae and Fungi

W.R. ULLRICH (With 4 Figures)

1	Introduction	376
2	Nitrate and Nitrite Reduction in Algae	377
2.1	Nitrate Reductase of Eucaryotic Algae	377
2.2	Nitrate Reductase in Blue-Green Algae	380
2.3	Nitrite Reductase in Algae	380
2.4	Location of Nitrate and Nitrite Reduction in Algal Cells	381
2.5	Stoichiometry Between Nitrate Reduction and O ₂ Exchange	381
3	Nitrate Uptake in Algae	382
3.1	General Remarks	382
3.2	Substrate Affinity	383
3.3	Light Dependence	384
3.4	pH-Dependence	385
3.5	Dependence on Carbon Sources	385
3.6	Inhibition by Anions	386
3.7	Inhibition by Ammonia and Amino Compounds	387
3.8	Effect of Metabolic Inhibitors and Uncouplers	387
3.9	Stoichiometry Between the Uptake of Nitrate and that of Other Ions	388
3.10	Transport Mechanism	388
4	Nitrite Uptake in Algae	389
5	General Remarks on Regulation of Nitrate and Nitrite Uptake	390
6	Uptake and Reduction of Nitrate and Nitrite in Fungi	391
	References	393

III. Metabolism of Sulfur and Phosphorus

III.1 Reduction and Other Metabolic Reactions of Sulfate

J.A. SCHIFF (With 6 Figures)

1	Introduction	401
2	The Place of Sulfate Reduction in the Sulfur Cycle	402
3	Phylogenetic Distribution of Reactions Involving Sulfate Transfer and Reduction	403
4	Sulfate Uptake, Activation and Transfer	404
5	Sulfate Reduction	406
5.1	Detailed Reactions of the Two Assimilatory Pathways	408
5.1.1	The APS Pathway	408
5.1.2	The PAPS Pathway	410
5.2	Location of Sulfate Reduction in Tissues and Organs of Multicellular Plants	413

6 Speculations on the Origin and Evolution of Pathways of Sulfate	
Reduction	413
References	416

III.2 Physiology and Metabolism of Phosphate and Its Compounds

R.L. BIELESKI and I.B. FERGUSON (With 4 Figures)

1 Introduction	422
2 Uptake and Transport of Phosphate	424
3 Efflux of Phosphate, and Aspects of Phosphate Deficiency	428
4 Phosphorus Compartments and Pools	431
5 The Form of Phosphorus in the Cell	433
6 Synthesis and Turnover of Phosphorus Compounds	440
7 Dynamics of Phosphate Use in the Plant	443
8 Conclusions	445
References	445

Author- and Subject Index (see Part B)
