I. Monomeric and Oligomeric Sugars and Sugar Derivatives – Occurrence, Metabolism, Function

1 Aldo (and Keto) Hexoses and Uronic Acids

D.S. FEINGOLD (With 9 Figures)

1	Introduction	3
1.1	Historical	3
1.2	Sugar Nucleotides and Carbohydrate Interconversions in Plants	6
1.3	Sugar Nucleotides Isolated from Plants to Date	6
2	Phosphorylation of Free Sugars	11
2.1	Hexokinase	12
2.2	D-Galactokinase and L-Arabinokinase	13
2.3	D-Glucuronokinase	13
2.4	D-Galacturonokinase	14
3	Formation of Nucleotide Sugars (Pyrophosphorylases)	14
3.1	UDP-D-Glucose Pyrophosphorylase	16
3.2	ADP-D-Glucose Pyrophosphorylase	20
3.3	GDP-D-Glucose Pyrophosphorylase	20
3.4	TDP-D-Glucose Pyrophosphorylase	21
3.5	Utilization of α -D-Galactopyranosyl Phosphate	21
3.6	GDP-D-Mannose Pyrophosphorylase	22
3.7	UDP-N-Acetyl-D-Glucosamine Pyrophosphorylase	22
3.8	ADP-N-Acetyl-D-Glucosamine Pyrophosphorylase	23
3.9	GDP-L-Fucose Pyrophosphorylase	23
3.10	UDP-D-Glucuronate Pyrophosphorylase	23
3.11	UDP-D-Galacturonate Pyrophosphorylase	24
3.12	Nucleoside Diphosphate Pentose Pyrophosphorylases	25
3.13	Other Nucleotide Sugar Pyrophosphorylase Activities	25
3.14	Other Transglycosylation Reactions Responsible for the Formation of Nucleotide Sugars	26
3.15	Degradation of Nucleotide Sugars	27
3.15.1	ADP-D-Glucose Phosphorylase	27
3.15.2	Hydrolysis of Nucleotide Sugars by Phosphodiesterase	28
4	Nucleotide Sugar Epimerases	30
4.1	UDP-D-Glucose-4-Epimerase	30
4.2	UDP-D-Xylose-4-Epimerase	34
4.2.1	Possible Origin of L-Arabinofuranosyl Moieties	35
4.3	UDP-D-Glucuronate-4-Epimerase	37
4.4	Biosynthesis of L-Galactose in Plants (GDP-D-Mannose-3,5-Epimerase)	37
4.5	GDP-D-Glucose-2-Epimerase	38
5	Biosynthesis of Deoxysugars in Plants	39
5.1	L-Rhamnose and L-Fucose	40
5.2	UDP-Digitoxose	43
6	Biosynthesis of Uronic Acid in Plants (D-Glucuronic Acid)	43
6.1	UDP-D-Glucose Dehydrogenase	43

7 De Novo Synthesis of UDP-D-Xylose; UDP-D-Glucuronate Decarboxylase . . .	49
7.1 UDP-D-Glucuronate Decarboxylase	49
8 Miscellaneous Topics (Not Treated Above)	53
8.1 Nucleotide Sugars Involving D-Fructose and D-Ribose	53
8.1.1 UDP-D-Fructose	53
8.1.2 ADP-D-Ribose (5)	54
8.2 Control of Nucleotide Sugar Synthesis and Utilization	55
9 Possible Evolutionary Significance of Carbohydrate Interconversion Pathways	55
References	58

2 Polyhydroxy Acids: Relation to Hexose Phosphate Metabolism

J.E. GANDER (With 4 Figures)

1 Introduction	77
2 Overview of the Role of Hexoses, Pentoses and Polyhydroxy Acids in Metabolic Systems of Plants	77
3 Reactions and Functions of the Oxidative Pentose Phosphate Pathway, and Properties of Glucose 6-Phosphate and 6-Phosphogluconate Dehydrogenases	79
4 Glucose 6-Phosphate-myo-Inositol Glucuronate Pathway and Metabolism of Phytic Acid	85
5 Biosynthesis, Metabolic Reactions and Proposed Metabolic Functions of L-Ascorbate	87
6 L-(+)-Tartaric Acid and Oxalic Acid Metabolism	92
7 Concluding Remarks	94
References	95

3 Amino Sugars – Plants and Fungi

L. BEEVERS (With 3 Figures)

1 Introduction	103
2 Nomenclature	103
3 Methods of Detection	104
4 Occurrence	105
4.1 Amino Sugars in Fungal Cell Walls	105
4.2 Mannans	106
4.3 Amino Sugars in Algal Cell Walls	106
4.4 Glycoproteins	106
4.4.1 Fungi	106
4.4.2 Higher Plants	107
4.4.3 Membrane Glycoproteins in Higher Plants	108
5 Glycolipids	109
5.1 Lipid Intermediates in Glycoprotein Biosynthesis	109
5.2 Glycosphingolipids	111
6 Amino Sugar Biosynthesis	111
6.1 Glucosamine 6-Phosphate	111
6.1.1 Hexokinases	112
6.2 Formation of <i>N</i> -Acetylglucosamine-6-Phosphate	113
6.3 Conversion of GlcNAc-6-Phosphate to GlcNAc-1-Phosphate	113
6.4 Amino Sugar Nucleotides	114
7 Galactosamine	115
8 Glycosidases	116
8.1 Higher Plants	116
8.2 Fungi	116
References	117

4 Branched-Chain Sugars

E. BECK (With 12 Figures)

1	Introduction	124
2	Branched-Chain Monosaccharides of Green Plants	125
2.1	D-Hamamelose	125
2.1.1	Elucidation of the Structure	125
2.1.2	Occurrence of Free D-Hamamelose	126
2.1.3	Biosynthesis of D-Hamamelose	126
2.1.4	Natural Derivatives of D-Hamamelose	129
2.1.5	Biological Degradation of D-Hamamelose	131
2.2	D-Apiose (3-C-Hydroxymethyl)-D-Glycero-Aldotetrose	132
2.2.1	Elucidation of the Structure	132
2.2.2	D-Apio D-Furanose as Glycosidic Component of Plant Cell Wall Polysaccharides and of Phenolic Plant Constituents	133
2.2.3	Biosynthesis of UDP-D-Apiose	135
2.2.4	Transfer of the D-Apiosyl-Residue	139
2.2.5	Metabolism of D-Apiose	139
3	Branched-Chain Monosaccharides of Microorganisms	140
3.1	Methyl-Branched Monosaccharides	145
3.1.1	CDP-L-Vinellose (Cytidine-6-Deoxy-3-C-(Methyl)-2-O-Methyl-L-Talose)	145
3.1.2	L-Noviose (6-Deoxy-3-O-Carbonyl-5-C-Methyl-4-O-Methyl-L-Lyxohexose)	146
3.1.3	L-Mycarose (2,6-Dideoxy-3-C-Methyl-L-Ribohexose)	146
3.1.4	L-Cladinose (2,6-Dideoxy-3-C-Methyl-3-O-Methyl-L-Ribohexose)	147
3.2	C-(Hydroxyethyl)-and C-(Oxoethyl)-Branched Monosaccharides	147
3.2.1	D-Aldgarose	147
3.2.2	The Branched-Chain Sugars of the Quinocycline Antibiotics	147
3.3	C-Hydroxymethyl- and C-Formyl-Branched Monosaccharides: The Sugars of the L-Streptose Family	149
4	Conclusion: Physiological Problems Originating from the Branched Carbon Skeleton	150
	References	151

5 Sugar Alcohols

R.L. BIELESKI

1	Introduction	158
1.1	General Comments on Polyols	158
1.2	Summary of Earlier Reviews	160
2	Occurrence	161
2.1	General Information	161
2.2	Mannitol	162
2.3	Sorbitol	165
2.4	Other Hexitols	167
2.5	The Tetritols and Pentitols	168
2.6	The Heptitols and Octitols	171
2.7	Other Polyols	171
2.8	The Heterosides	172
2.9	Phosphate Esters	173
3	Methods of Study	174
3.1	General	174
3.2	Preparations of Extracts	174
3.3	Fractionation of the Extract	174
3.4	Use of Chromatographic and Electrophoretic Procedures	175
3.5	Methods of Estimation	176

4 Metabolism of Polyols	176
4.1 General	176
4.2 Photosynthetic Production of Polyols	176
4.3 Metabolism of Polyols and Sugars	177
4.4 Enzymes of Polyol Metabolism	178
4.5 Uptake of Polyols	180
5 Physiology and Role in Nature	180
5.1 Sugar Interconversion	180
5.2 Polyols as Redox Agents	181
5.3 Osmoregulation	181
5.4 Cryoprotection	182
5.5 Transport and Storage	183
6 Future Directions of Research	185
7 Conclusion	187
References	187

6 Cyclitols

F.A. LOEWUS and D.B. DICKINSON (With 4 Figures)

1 Introduction	193
2 Nomenclature and Stereochemistry	193
3 Occurrence	195
4 Formation	200
5 Metabolic Processes	201
6 Physiological Roles	204
7 Concluding Remarks	207
References	208

7 Sucrose and Other Disaccharides

G. AVIGAD

1 Introduction	217
2 Sucrose	218
2.1 Introduction	218
2.2 Enzymes of Sucrose Biosynthesis	220
2.2.1 General	220
2.2.2 Sucrose Synthase	222
2.2.3 Sucrose Phosphate Synthase	229
2.2.4 Sucrose Phosphatase	231
2.2.5 Assay of Sucrose-Synthesizing Enzymes	232
2.3 Sucrose Hydrolases (Invertases)	233
2.3.1 General	233
2.3.2 The Enzymes	234
2.3.3 Level and Location of Invertase in Tissues	237
2.3.4 Invertase Inhibitors	240
2.3.5 Sucrose and the Synthesis of β -Fructofuranans	240
2.4 Subcellular Site of Sucrose Synthesis	241
2.4.1 The Compartment	241
2.4.2 Carbon Fluxes in Leaves	243
2.4.3 Carbon Fluxes in Storage Tissues	245
2.5 Source of Carbon for Sucrose Synthesis	246
2.5.1 Gluconeogenesis from Phosphoglycerate	246
2.5.2 Photorespiration Intermediates	247
2.5.3 Pyruvate and Related Intermediates	249
2.5.4 Utilization of Storage Reserves	250

2.5.5	Metabolic Controls	251
2.5.6	^{13}C -Discrimination	252
2.6	Sucrose Translocation	255
2.7	Intracellular Compartmentation of Sucrose	255
2.8	Sucrose-Starch Transformation	258
2.8.1	General Considerations	258
2.8.2	Photosynthetic Tissues	259
2.8.3	Rice	260
2.8.4	Maize	261
2.8.5	Wheat, Barley and Sorghum	262
2.8.6	Potato Tubers	262
2.9	Sucrose as a Source of Nucleoside Diphosphate Glycosyls	263
2.10	Utilization of Exogenous Sucrose	266
2.11	Sucrose and Environmental Stress	267
2.11.1	Water Stress	267
2.11.2	Illumination and Irradiance	268
2.11.3	Frost	268
2.11.4	High Temperature	269
2.11.5	NH_4^+	269
2.11.6	Metal Toxicity	269
2.11.7	Potassium Deficiency	269
2.11.8	CO_2 and SO_2	269
2.11.9	Salt and Ion Concentration	269
2.11.10	Infection and Symbiosis	270
2.11.11	Low O_2	271
2.11.12	Boron	271
3	α,α -Trehalose (<i>O</i> - α -D-Glucopyranosyl- α - <i>O</i> -D-Glucopyranoside)	271
3.1	Occurrence	271
3.2	Metabolism	273
3.2.1	Synthesis	273
3.2.2	Degradation	274
3.2.3	Metabolic Pattern	275
4	Other Nonreducing Disaccharides and Related Glycosides	276
4.1	Disaccharides	276
4.2	Monoglycosides of Polyhydroxy Alcohols and Acids	276
4.2.1	Monoglycoside-Alditols	276
4.2.2	Glycosyl Glyceric Acids	278
4.2.3	Glycoside-Cyclitols	278
5	Maltose	279
5.1	General	279
5.2	Occurrence	280
5.3	Mechanism of Formation	282
5.4	Mechanism of Utilization	283
5.5	Patterns of Metabolism in Leaves	284
5.6	Utilization of Maltose as an External Source of Carbohydrate	287
6	Reducing Disaccharides	288
6.1	Introduction	288
6.2	Disaccharides from Storage Oligosaccharides	289
6.2.1	Melibiose	289
6.2.2	Isomelibiose (Umbelliferobiose)	291
6.2.3	Planteobiose	291
6.2.4	Isolychnobiose	291
6.2.5	Turanose	291
6.2.6	Gentiobiose	292
6.3	Disaccharides as Products of Polysaccharide Degradation	292
6.3.1	β -Glucosides	292
6.3.2	Mannosides	293

6.3.3 Galactosides	294
6.3.4 Lactose	294
6.3.5 Arabinosides	295
6.3.6 Xylosides	295
6.3.7 Fructobioses	295
6.3.8 Hexuronides	295
6.3.9 Chitobiose	296
6.4 Reducing Disaccharides Produced by Glycoside Hydrolase-Catalyzed Transglycosylations	296
6.4.1 D-Glucosides	296
6.4.2 D-Galactosides	297
6.4.3 β -Fructofuranosides	297
6.5 Disaccharides in Plant Glycosides	297
References	300

8 Oligosaccharides Based on Sucrose (Sucrosyl Oligosaccharides)

O. KANDLER and H. HOPF (With 16 Figures)

1 Introduction	348
2 Extraction, Isolation and Identification of Sucrosyl Oligosaccharides	348
3 Occurrence of Sucrosyl Oligosaccharides and Their Distribution in Higher Plants	353
3.1 Raffinose Series	353
3.2 <i>Lolium</i> Trisaccharide	356
3.3 Umbelliferose	356
3.4 Lychnose and Isolychnose Series	357
3.5 Planteose Series	358
3.6 Kestoses (Fructosylsucroses) Series (Fructan)	360
3.7 Gentianose	362
4 Biosynthesis of Sucrosyl Oligosaccharides	363
4.1 The Biosynthesis of the Raffinose Series	363
4.2 Biosynthesis of <i>Lolium</i> Trisaccharide	365
4.3 Biosynthesis of Umbelliferose	365
4.4 Biosynthesis of the Lychnose and Isolychnose Series	366
4.5 Biosynthesis of the Planteose Series	367
4.6 Biosynthesis of the Kestoses (Fructosylsucroses) Series (Fructan)	367
4.7 Biosynthesis of Gentianose	368
5 Degradation of Sucrosyl Oligosaccharides	368
6 Function of Sucrosyl Oligosaccharides	369
6.1 Storage	369
6.2 Translocation	372
6.3 Frosthardeness	374
7 Concluding Remarks	376
References	379

9 Glycosylation of Heterosides (Glycosides)

G. FRANZ

1 Introduction	384
2 O-Glycosides	385
2.1 Phenolic Glycosides	385
2.1.1 Simple Phenolic Glycosides	385
2.1.2 Flavonoid Glycosides	386
2.1.3 Coumarin Glycosides	387
2.1.4 Anthraquinone Glycosides	387

2.2 Glycosides of Terpenoids	387
2.2.1 Monoterpene Glycosides	387
2.2.2 Steryl Glycosides	388
2.2.3 Cardiac (Digitalis) Glycosides	388
2.2.4 Glycosylated Steroid Alkaloids	389
3 C-Glycosides	389
4 Conclusion	390
References	390

II. Macromolecular Carbohydrates – Occurrence, Metabolism, Function

10 Biosynthesis of Starch and Its Regulation

J. PREISS (With 2 Figures)

1 Pertinent Enzymatic Reactions	397
1.1 Suggestive Evidence for the Major Route to Starch Formation	397
1.2 Sucrose Conversion to Starch in Reserve Tissues	399
2 Regulation of Starch Synthesis	400
2.1 General Considerations	400
2.2 Regulation of Leaf and Algal ADPglucose Pyrophosphorylases by 3-P-Glycerate and Orthophosphate	400
2.3 Are the Allosteric Phenomena Operative in Vivo?	403
3 Properties of the Starch Biosynthetic Enzymes	405
3.1 ADPglucose Pyrophosphorylase	405
3.1.1 Enzyme from Higher Plants, Green Algae and Blue-Green Bacteria	405
3.1.2 Native and Subunit Molecular Weight of ADPglucose Pyrophosphorylase	407
3.1.3 ADPglucose Pyrophosphorylases of Nonphotosynthetic Plant Tissues	407
3.2 Properties of Starch Synthase (ADPglucose: (1 → 4)- α -D-Glucan 4- α - Glucosyltransferase)	408
3.2.1 Starch Bound and Soluble Starch Synthases	408
3.2.2 Requirements for Activity	409
3.2.3 Multiple Forms of Soluble Starch Synthase	410
4 Branching (Q) Enzyme ((1 → 4)- α -Glucan 6-Glycosyl Transferase)	411
4.1 Mechanism of Action	411
4.2 Multiple Forms of Plant Branching Enzymes	412
4.3 A Possible Function for the Multiple Forms of Starch Synthases and Branching Enzymes	413
References	413

11 Reserve Polysaccharides Other Than Starch in Higher Plants

H. MEIER and J.S.G. REID (With 8 Figures)

1 Introduction	418
2 Cell Wall Storage Polysaccharides in Seeds	419
2.1 Occurrence and Classification	419
2.2 The Mannan Group	419
2.2.1 "Pure" Mannans	420
2.2.2 Glucomannans	422
2.2.3 Galactomannans	423
2.2.4 Other Mannans	428
2.3 The Xyloglucans	429
2.3.1 Distribution	429
2.3.2 Structures	430
2.3.3 Metabolism	431

2.4	The Galactans	431
2.5	Others	433
3	Nonstarch Storage Polysaccharides of Vegetative Tissues	435
3.1	Occurrence and Classification	435
3.2	The Fructan Group	435
3.2.1	Fructans of the Dicotyledons	435
3.2.2	Fructans of the Monocotyledons	441
3.3	The Mannan Group	451
3.3.1	Occurrence and Chemistry	451
3.3.2	Cytology, Deposition, and Mobilization	456
3.4	Other Polysaccharides with a Possible Reserve Function	457
4	Biological Functions	457
4.1	Cell Wall Storage Polysaccharides in Seeds	458
4.2	Nonstarch Storage Polysaccharides in Vegetative Tissue	460
	References	461

12 Reserve Carbohydrates of Algae, Fungi, and Lichens

D.J. MANNERS and R.J. STURGEON (With 1 Figure)

1	Introduction	472
1.1	Starch and Glycogen-Type Reserve Polysaccharides	473
1.2	(1-3)- β -D-Glucans	474
1.3	Other Types of Reserve Carbohydrate	475
2	Reserve Carbohydrates of Marine Algae	475
2.1	α -D-Glucans	475
2.1.1	Floridean Starch	475
2.1.2	Starches	479
2.2	β -D-Glucans	481
2.2.1	Laminarin	481
2.2.2	Eisenan	486
2.3	Fructans	487
2.4	Xylans	487
2.5	Other Polysaccharides	489
3	Reserve Carbohydrates of Freshwater Algae	489
3.1	α -D-Glucans	490
3.1.1	Starches	490
3.1.2	Amylopectin and Phytoglycogen Type	492
3.2	β -D-Glucans	494
3.2.1	Paramylon	494
3.2.2	Leucosin (Chrysolaminarin)	496
3.3	Other Polysaccharides	496
4	Reserve Carbohydrates in Fungi	496
4.1	α -D-Glucans	496
4.1.1	Glycogen Type	496
4.1.2	Other (1-4)- and (1-6)- α -D-Glucans	501
4.1.3	(1-4)- α -D-Glucans	501
4.1.4	(1-3)- α -D-Glucans	502
4.1.5	Nigeran	503
4.2	β -D-Glucans	504
4.2.1	(1-3)- β -D-Glucans	504
4.3	Other Polysaccharides	505
5	Reserve Carbohydrates of Lichens	506
5.1	α -D-Glucans	506
5.2	β -D-Glucans	507
	References	507

13 Plant Glycoproteins

R.R. SELVENDRAN and M.A.O'NEILL (With 11 Figures)

1	Introduction	515
2	Natural Occurrence of Glycoproteins	516
3	Isolation, Fractionation, and Purification	516
3.1	Methods of Extraction: Practical Considerations	516
3.2	Isolation and Purification	520
4	Composition of Glycoproteins	521
5	Structural Studies	534
5.1	Types of Peptide-Carbohydrate Linkages	534
5.2	Structural Studies of the Carbohydrate Groups	536
6	Some of the Better-Defined Glycoproteins and Proteoglycans	536
6.1	Lectins (or Phytoagglutinins)	537
6.1.1	Soybean Agglutinin (SBA)	537
6.1.2	Lectins from Some <i>Phaseolus vulgaris</i> Species	540
6.1.3	Lima Bean Agglutinin	541
6.1.4	Sainfoin Agglutinin	543
6.1.5	Broad Bean Lectin	545
6.1.6	Potato Lectin	545
6.2	Enzymes	547
6.2.1	Stem Bromelain	547
6.2.2	Ficin	549
6.2.3	Horseradish Peroxidase	550
6.2.4	Invertases	551
6.3	Storage Proteins	552
6.3.1	7S Protein of Soybean	552
6.3.2	Kidney Bean Glycoproteins	555
6.3.3	Vicilin and Legumin	556
6.4	Toxins	557
6.4.1	Ricin D	557
6.5	Intracellular Proteoglycans and Glycoprotein-Polysaccharide Complexes	559
6.5.1	Intracellular Hydroxyproline-Rich Proteoglycan of Suspension-Cultured Tobacco Cells	559
6.5.2	Glycoproteins and Glycoprotein-Polysaccharide Complexes from the Leaves of Higher Plants	560
6.5.3	Arabinogalactan-Proteins from Higher Plants	561
6.6	Plant Cell Wall Glycoproteins	562
7	Glycoprotein Biosynthesis	564
8	Comparison of Higher Plant Glycoprotein Structure with Those of Micro-Organisms and Animals	565
8.1	<i>N</i> -Glycosidic Linkages	565
8.2	<i>O</i> -Glycosidic Linkages Through the Hydroxyl Group of Hydroxyproline or Hydroxylysine	567
8.3	<i>O</i> -Glycosidic Linkage Through the Hydroxyl Group of Serine and Threonine	567
9	Concluding Remarks	568
	References	569

14 Membrane Glycoproteins

D.J. BOWLES

1	The Membrane as a Molecular Milieu	584
2	Structure and Mechanisms of Biosynthesis	585
2.1	Structure	585
2.2	Mechanisms of Biosynthesis	586

2.2.1 Use of Model Systems	586
2.2.2 Synthesis of Integral Membrane Proteins	586
2.2.3 Cotranslational Glycosylation	587
2.2.4 Post-Translational Glycosylation	588
2.2.5 Synthesis of Peripheral Membrane Proteins	588
2.2.6 Synthesis of Mitochondrial and Chloroplast Membrane Proteins	589
2.2.7 Summary of Mechanisms of Biosynthesis	589
3 Intracellular Transport	590
3.1 General Principles	590
3.2 Regulation	590
3.2.1 Secretion Signals	591
3.2.2 Retention Signals	592
4 Plant Membrane Glycoproteins	593
4.1 Distribution	593
4.1.1 Cell Surface	593
4.1.2 Intracellular Membranes: GA, ER and Tonoplast	594
4.1.3 Chloroplasts and Mitochondria	594
4.1.4 Microbodies: Glyoxysomes and Peroxisomes	595
4.1.5 Other Membranes	595
4.2 Structure and Mechanisms of Biosynthesis	596
4.3 Intracellular Transport	596
5 Future Perspectives	596
References	597

15 Glycolipids and Other Glycosides

A.D. ELBEIN (With 6 Figures)

1 Introduction	601
2 Methods Used in the Isolation and Purification of Glycolipids	602
3 Glycosyl Diglycerides	602
3.1 Mono- and Digalactosyl Diglycerides	603
3.2 Sulfoquinovosyl Diglyceride	606
4 Cerebrosides	607
5 Phytoglycolipids	608
6 Steryl Glucosides	609
7 Lipid-Linked Saccharides	610
References	611

16 Steryl Glycosides

M. AXELOS and C. PÉAUD-LENOËL (With 1 Figure)

1 Introduction	613
2 Presence and Structure of Glycosylated Sterols in Plants	613
3 Organ and Cellular Localization of Steryl Glucosides	615
4 Biosynthesis and Degradation of Steryl Glucosides and Acylated Steryl Glucosides	616
5 The Intracellular Location of UDPGlc: Sterol Glucosyl Transferase and Steryl Glucoside Acylase	621
6 Distribution of Steryl Glucosides and Acylated Steryl Glucosides as a Probe of Functions	622
7 Steryl Glucosides and Acylated Steryl Glucosides in Plant Membranes	623
8 Steryl Glucosides as Intermediary Sugar Carriers	625
9 Miscellaneous Activities of Steryl Glucosides in Plants	626

III. Physiological Processes

17 Transport of Sugar

E. KOMOR (With 5 Figures)

1	Introduction	635
2	Classification of Sugar Transport Across Membranes	635
2.1	Passive Transport (Diffusion)	636
2.2	Mediated Diffusion	636
2.3	Active Transport	639
3	Energy Input for Active Sugar Transport	644
3.1	Equilibrium Shift by Substrate Conversion	644
3.2	Primary Active Transport	645
3.3	Secondary Active Transport	645
3.3.1	Proton-Symport in Plants	646
3.3.2	Proton-Translocating ATPases on Plasmalemma and Tonoplast	650
3.3.3	Sugar Uptake Driven by Sugar Efflux	652
4	Kinetic Properties of Sugar Transport Systems	653
4.1	Sugar Transport at Net and Steady-State Conditions	653
4.2	The Sugar Accumulation Ratio	655
4.3	Effect of Metabolic Inhibitors on Transport Kinetics	656
4.4	Influence of Proton-Gradient and Membrane Potential on Kinetics	657
5	Transport Proteins	660
6	Regulation of Sugar Transport	662
6.1	Induction and Repression	662
6.2	Transport Regulation by Direct Effectors	662
7	Relevance of Sugar Transport Systems for Plant Cells	664
8	Concluding Remarks	666
	References	666

18 Secretion of Nectar

N. FINDLAY

1	Introduction	677
2	Route of Transport	677
2.1	Apoplastic Transport	677
2.2	Symplastic Transport	678
3	Sites of Membrane Transport	679
3.1	At the Phloem	679
3.2	To the Exterior	679
3.2.1	Modifications Increasing the Secreting Surface	679
3.2.2	Protoplast Specialization	679
4	Metabolism	680
4.1	Sugar Interconversion	680
4.2	Energy Metabolism	681
4.3	Phosphatases	681
4.4	Sugar Transport	682
	References	682

19 Storage of Sugars in Higher Plants

J. WILLENBRINK (With 3 Figures)

1	Introduction	684
2	Functional Anatomy of Storage Tissues	684
3	Translocation of Sucrose to the Storage Organs	685
4	Storage of Sugars in Fruits	686

5 Storage of Sucrose in Sugarcane	688
6 Storage of Sucrose in Roots and Beets	688
7 Transfer of Sucrose into the Vacuole	692
8 Remobilization of Sugars from the Storage Compartment	694
9 Concluding Remarks	694
References	695

20 Storage of Starch

C.F. JENNER

1 Introduction	700
2 Occurrence of Starch	700
2.1 Global Data	700
2.2 Measurement of Starch	700
2.2.1 Occurrence – Dry Fruits	701
2.2.2 Occurrence – Fleshy Organs	703
3 Patterns of Accumulation	705
3.1 Temporal	705
3.2 Ontogenetic Patterns	706
3.2.1 Inception	706
3.2.2 Acceleration	707
3.2.3 The Grand Phase of Accumulation	708
3.2.4 Termination	711
4 Distribution of Starch	712
4.1 Within Storage Organs	712
4.1.1 Vegetative Organs	712
4.1.2 Seeds	713
4.2 Between Storage Organs	713
5 Plastids	714
5.1 Origin and Development	714
5.2 Developmental Homologies	715
5.3 Biochemical Attributes of Plastids	716
5.3.1 Nucleic Acids	716
5.3.2 Enzymes	716
5.4 Stability of Amyloplast Membranes	718
6 Granules	718
6.1 Morphology	718
6.2 Initiation of Granules	718
6.3 Growth of Granules	719
6.3.1 Growth and Lamellae	720
6.3.2 Mechanism of Growth	722
6.3.3 Growth and Changes in Composition	722
6.3.4 Granule Size and Composition	723
7 Metabolism of Starch	723
7.1 Substrates and Precursors	723
7.2 Pathways of Synthesis	724
7.3 Degradation of Starch	725
7.4 The Turnover of Starch	726
7.5 Distribution of ¹⁴ C	727
8 Regulatory Mechanisms	727
8.1 Intracellular Controls	728
8.2 Supply of Substrate	730
8.2.1 The Seed	730
8.2.2 Fruits, Roots, and Tubers	731
8.2.3 Control by Transport of Substrate	731
8.3 Growth of Storage Organs	732

9 Environmental Influence	733
9.1 Irradiance	733
9.2 Temperature	734
9.3 Water Deficit	734
9.4 Mineral Nutrition	735
10 Summary and Conclusions	735
References	737

21 Control by External and Internal Factors Over the Mobilization of Reserve Carbohydrates in Higher Plants

P. HALMER and J.D. BEWLEY (With 18 Figures)

1 Introduction	748
2 Seeds	748
2.1 Starch in Cereals	749
2.1.1 Gibberellins and α -Amylase Synthesis by the Barley Aleurone Layer	750
2.1.2 Gibberellins and the Synthesis of Other Carbohydrases in Barley Grains	753
2.1.3 Gibberellin-Induced Enzymes in Other Cereal Grains	754
2.2 Starch in Legumes	755
2.2.1 Control by the Axis	756
2.3 Mannans in Seed Endosperms	762
2.3.1 Legumes	762
2.3.2 Lettuce	764
2.3.3 Umbellifers and Palms	767
2.4 Other Cell Wall Polysaccharides	768
2.5 Raffinose-Oligosaccharides	768
3 Tubers, Roots, and Bulbs	770
3.1 Fructans in Jerusalem Artichoke Tubers, and Other Roots and Bulbs	770
3.2 Starch in Potato Tubers	773
4 Starch in Leaves	777
5 Fleshy Fruits	781
5.1 Starch	781
5.2 Cell Wall Polysaccharides	781
6 Thermogenesis in Aroids	782
7 Changes in Stems, Roots, and Leaves Associated with Environmental Stresses	783
8 Starch in Organogenesis	784
References	786
Author Index	795
Species Index	887
Subject Index	895
