

# Contents

## 1 Historical Introduction

K. MÖTHES 1

References . . . . . 9

## 2 The Possible Significance of Secondary Compounds in Plants

E.A. BELL

1 Introduction . . . . . 11

2 Phylogenetic Significance . . . . . 11

3 Ecological Significance . . . . . 15

References . . . . . 19

## 3 Expression and Control of Secondary Metabolism

M. LUCKNER (With 3 Figures)

1 Introduction: Expression of Secondary Metabolism – a Feature of Cell  
Specialization . . . . . 23

2 Regulation of Enzyme Amount in Secondary Metabolism . . . . . 23

3 Regulation of Enzyme Activity . . . . . 28

4 Compartmentation as Principle of Control in Secondary Metabolism . . . . . 32

5 Integration of Secondary Metabolism in Programs of Differentiation  
and Development . . . . . 41

5.1 The Influence of Nutrients . . . . . 42

5.2 Action of Signals . . . . . 46

5.3 Coordinated Enzyme Expression . . . . . 47

5.4 Sequential Gene Expression in Secondary Metabolism . . . . . 47

5.5 Secondary Metabolism and Cell Specialization . . . . . 48

6 Some Speculations About the Evolution of the Control Mechanisms  
in Secondary Metabolism . . . . . 48

7 Summary . . . . . 50

References . . . . . 50

## 4 The Alkaloids

### 4.1 Alkaloids Derived from Ornithine, Lysine, and Nicotinic Acid

E. LEETE (With 16 Figures)

1 Alkaloids Derived from Ornithine . . . . . 65

1.1 Introduction . . . . . 65

1.2 The Tobacco Alkaloids . . . . . 66

1.3 Tropane Alkaloids . . . . . 67

1.4 Pyrrolizidine Alkaloids . . . . . 71

1.5 Phenanthroindolizidine Alkaloids . . . . . 71

2 Alkaloids Derived from Lysine . . . . . 72

2.1 Unsymmetrical Incorporation of Lysine . . . . .	72
2.2 Symmetrical Incorporation of Lysine . . . . .	74
2.3 Lycopodium Alkaloids . . . . .	77
2.4 Securinine . . . . .	79
2.5 Mimosine . . . . .	79
3 Alkaloids Derived from Nicotinic Acid . . . . .	79
3.1 Introduction . . . . .	79
3.2 The Tobacco Alkaloids . . . . .	80
3.3 Dioscorine . . . . .	81
3.4 Ricinine and Other Pyridones . . . . .	84
References . . . . .	84

## 4.2 Alkaloids Derived from Phenylalanine and Tyrosine

G.B. FODOR (With 47 Figures)

1 Introduction . . . . .	92
2 Alkaloids Derived from Phenylalanine . . . . .	92
2.1 Ephedra Alkaloids . . . . .	93
2.2 Cytochalasins . . . . .	94
2.3 Gliotoxin . . . . .	95
2.4 Tenellin . . . . .	95
2.5 Taxus Alkaloids . . . . .	95
2.6 The Lunaria Alkaloids . . . . .	95
2.7 The Lythraceae Alkaloids . . . . .	96
3 Alkaloids Derived from Tyrosine and/or DOPA . . . . .	97
3.1 Simple Phenylethylamines . . . . .	97
3.2 Simple Isoquinoline Alkaloids . . . . .	99
3.3 Benzyloquinolines and Related Alkaloids Derived from Two Moles of Tyrosine . . . . .	100
3.4 Isoquinoline Alkaloids from Norbelladine (Amaryllidaceae Alkaloids) . . . . .	112
3.5 Colchicine . . . . .	116
3.6 Emetine and Related Ipecacuanha Alkaloids . . . . .	118
3.7 Betalains . . . . .	119
3.8 Alkaloids Derived from Noradrenaline . . . . .	119
3.9 Complex Alkaloids Formed from Tyrosine and a Different Precursor . . . . .	120
References . . . . .	121

## 4.3 Alkaloids Derived from Tryptophan and Anthranilic Acid

D. GRÖGER (With 15 Figures)

1 Indole Alkaloids . . . . .	128
1.1 Introduction . . . . .	128
1.2 Structural Types of Indole Alkaloids . . . . .	128
1.3 Biochemistry of Indole Alkaloids . . . . .	130
2 Alkaloids Derived from Anthranilic Acid . . . . .	145
2.1 Introduction . . . . .	145
2.2 Protoalkaloids . . . . .	145
2.3 Quinoline Alkaloids . . . . .	145
2.4 Quinazolines . . . . .	147
2.5 Acridine Alkaloids . . . . .	149
2.6 Miscellaneous . . . . .	152
References . . . . .	153

## 4.4 Alkaloids Derived from Histidine and Other Precursors

G.B. FODOR (With 13 Figures)

1 Alkaloids Derived from Histidine . . . . .	160
1.1 Dolicotheline . . . . .	160

1.2 Pilocarpine . . . . .	160
2 Alkaloids Derived from Other Precursors . . . . .	162
2.1 Alkaloids Derived by Linear Combination of Acetate . . . . .	162
2.2 Alkaloids Derived from Isoleucine . . . . .	163
References . . . . .	165

## 4.5 Isoprenoid Alkaloids

J.G. RODDICK

1 General Introduction . . . . .	167
2 Terpenoid Alkaloids . . . . .	168
2.1 Introduction . . . . .	168
2.2 Monoterpenoid Alkaloids . . . . .	168
2.3 Sesquiterpenoid Alkaloids . . . . .	169
2.4 Diterpenoid Alkaloids . . . . .	170
2.5 Triterpenoid Alkaloids . . . . .	172
3 Steroidal Alkaloids . . . . .	173
3.1 Introduction . . . . .	173
3.2 Solanum Alkaloids . . . . .	174
3.3 Veratrum Alkaloids . . . . .	176
3.4 Alkaloids of the Apocynaceae . . . . .	178
3.5 Alkaloids of the Buxaceae . . . . .	179
References . . . . .	180

## 5 The Isoprenoids

### 5.1 The Terpenoids

D.V. BANTHORPE and B.V. CHARLWOOD (With 12 Figures)

1 Introduction . . . . .	185
2 Distribution of the Terpenoids . . . . .	187
2.1 General . . . . .	187
2.2 Hemiterpenes . . . . .	187
2.3 Monoterpenes . . . . .	188
2.4 Sesquiterpenes . . . . .	190
2.5 Diterpenes . . . . .	191
2.6 Sesterterpenes . . . . .	192
2.7 Nonsteroidal Triterpenes . . . . .	192
3 Structural Diversity of Biosynthesis of C5 to C30 Compounds . . . . .	192
3.1 Hemiterpenes (C5 Compounds) . . . . .	192
3.2 Monoterpenes (C10 Compounds) . . . . .	192
3.3 Sesquiterpenes (C15 Compounds) . . . . .	199
3.4 Diterpenes (C20 Compounds) . . . . .	207
3.5 Sesterterpenes (C25 Compounds) . . . . .	210
3.6 Nonsteroidal Triterpenes (C30 Compounds) . . . . .	210
4 Terpene Biosynthesis in Cell-Free Extracts and Tissue Culture . . . . .	213
4.1 Cell-Free Extracts . . . . .	213
4.2 Tissue Cultures . . . . .	214
References . . . . .	215

### 5.2 Steroids

C. GRUNWALD

1 Introduction . . . . .	221
2 Sterols . . . . .	221
2.1 Structure . . . . .	221
2.2 Classification . . . . .	222
2.3 Distribution . . . . .	223

2.4 Biosynthesis . . . . .	225
2.5 Seed Germination and Plant Growth . . . . .	230
2.6 Physiological Function . . . . .	232
3 Steryl Esters . . . . .	233
3.1 Occurrence and Distribution . . . . .	233
3.2 Biosynthesis . . . . .	233
3.3 Physiological Function . . . . .	234
4 Steryl Glycosides and Acylsteryl Glycosides . . . . .	234
4.1 Occurrence and Distribution . . . . .	234
4.2 Biosynthesis . . . . .	235
4.3 Physiological Function . . . . .	235
5 Ecdysteroids . . . . .	236
5.1 Terminology, Chemistry, Isolation, and Distribution . . . . .	236
5.2 Biosynthesis . . . . .	238
5.3 Function . . . . .	239
6 Progestagens . . . . .	240
7 Corticosteroids . . . . .	241
7.1 Occurrence . . . . .	241
7.2 Physiological Function . . . . .	241
8 Estrogens and Androgens . . . . .	242
8.1 Occurrence . . . . .	242
8.2 Biosynthesis . . . . .	243
8.3 Physiological Function . . . . .	243
9 Cardenolides . . . . .	244
9.1 Chemistry and Distribution . . . . .	244
9.2 Biosynthesis . . . . .	244
9.3 Physiological Function . . . . .	245
10 Sapogenins . . . . .	245
References . . . . .	246

### 5.3 Carotenoids

T.W. GOODWIN (With 16 Figures)

1 Introduction . . . . .	257
2 Biosynthesis . . . . .	259
2.1 General Pathway . . . . .	259
2.2 Stereochemistry . . . . .	260
3 Higher Plants . . . . .	261
3.1 Leaves . . . . .	261
3.2 Anthers and Pollen . . . . .	267
3.3 Flowers . . . . .	267
3.4 Seeds . . . . .	267
3.5 Fruit . . . . .	268
3.6 Roots . . . . .	272
3.7 Formation and Metabolism . . . . .	273
3.8 Contribution to Flower Colour . . . . .	275
3.9 Taxonomic Significance of Fruit Carotenoids . . . . .	276
4 Mosses, Liverworts and Spore-Bearing Vascular Plants . . . . .	276
5 Algae . . . . .	276
5.1 Distribution . . . . .	276
5.2 Localization . . . . .	278
5.3 Carotenoids and Algal Taxonomy and Evolution . . . . .	278
6 Function . . . . .	282
6.1 Introduction . . . . .	282
6.2 Photosynthesis . . . . .	282
6.3 Photoprotection . . . . .	282
6.4 The Xanthophyll Cycle . . . . .	283
6.5 Phototropism . . . . .	284
References . . . . .	285

## 5.4 Polyisoprenoids

### 5.4.1 Polyprenols and Terpenoid Quinones and Chromanols

D.R. THRELFALL (With 2 Figures)

1 Introduction . . . . .	288
2 Polyprenols . . . . .	288
2.1 Nature and Distribution . . . . .	288
2.2 Seasonal Variation and Intracellular Distribution . . . . .	290
2.3 Biosynthesis . . . . .	290
2.4 Function . . . . .	291
3 Terpenoid Quinones and Chromanols . . . . .	292
3.1 Nature and Distribution . . . . .	292
3.2 Intracellular Distribution . . . . .	292
3.3 Biosynthesis . . . . .	298
3.4 Formation in Relation to Plant Development . . . . .	300
3.5 Function . . . . .	305
References . . . . .	306

### 5.4.2 Polyisoprene

B.L. ARCHER (With 2 Figures)

1 Introduction . . . . .	309
2 Occurrence . . . . .	309
2.1 Rubber, Gutta, and Chicle . . . . .	309
2.2 Mode of Occurrence of Polyisoprene in Plants . . . . .	310
2.3 The Laticiferous System in <i>Hevea brasiliensis</i> . . . . .	310
2.4 The Composition of Latex . . . . .	310
2.5 The Polyisoprene Particle in Plants . . . . .	313
3 Chemical and Physical Properties of Polyisoprene . . . . .	313
3.1 Purification . . . . .	313
3.2 Molecular Structure . . . . .	314
3.3 Physical Properties . . . . .	314
3.4 The Gel-Phase in Natural Rubber . . . . .	314
3.5 Molecular Weight . . . . .	315
3.6 Chemical Properties . . . . .	315
4 Biosynthesis of Rubber . . . . .	316
5 Role of Polyisoprene in Plants . . . . .	319
6 The Artificial Stimulation of the Flow of Latex from <i>Hevea brasiliensis</i> . . . . .	320
7 Breeding of <i>Hevea brasiliensis</i> . . . . .	321
8 Propagation and Tissue Culture of <i>Hevea brasiliensis</i> . . . . .	321
References . . . . .	322

## 6 Plant Phenolics

J.B. HARBORNE (With 16 Figures)

1 Introduction . . . . .	329
2 Phenolic Aglycones . . . . .	331
2.1 Simple Phenols and Phenolic Acids . . . . .	331
2.2 Phenylpropanoids . . . . .	334
2.3 Flavonoids . . . . .	340
2.4 Xanthenes and Stilbenes . . . . .	350
2.5 Quinones . . . . .	352
2.6 Miscellaneous Phenols . . . . .	356
3 Phenolic Conjugates . . . . .	358
3.1 Functional Significance of Conjugation . . . . .	358
3.2 Glycosidic Variation . . . . .	359
3.3 Bound Forms of Hydroxycinnamic Acids . . . . .	362
3.4 Lipid-Soluble Derivatives . . . . .	364

3.5 Sulphates . . . . .	366
3.6 Polymers . . . . .	367
4 Biosynthesis and Metabolism of Phenolics . . . . .	369
4.1 Carbon Pathway . . . . .	369
4.2 Enzymology . . . . .	375
4.3 Physiology of Biosynthesis . . . . .	381
4.4 Turnover and Metabolism . . . . .	383
5 Phenolic Production in Tissue and Cell Culture . . . . .	386
5.1 Introduction . . . . .	386
5.2 Qualitative Aspects . . . . .	387
5.3 Metabolic Aspects . . . . .	390
6 Functions of Phenolics in Plants . . . . .	391
6.1 Physiological Interactions . . . . .	391
6.2 Ecological Significance . . . . .	393
References . . . . .	395

## 7 Non-Protein Amino Acids in Plants

E.A. BELL

1 Introduction . . . . .	403
2 Chemistry and Occurrence . . . . .	404
2.1 Neutral Aliphatic Amino Acids . . . . .	404
2.2 Sulphur and Selenium-Containing Amino Acids . . . . .	406
2.3 Imino Acids . . . . .	409
2.4 Acidic Amino Acids and Amides . . . . .	411
2.5 Basic Amino Acids and Related Compounds . . . . .	415
2.6 Heterocyclic Amino Acids . . . . .	418
2.7 Aromatic Amino Acids . . . . .	419
2.8 Miscellaneous Amino Acids . . . . .	421
3 Accumulation of Non-Protein Amino Acids . . . . .	423
4 Biosynthesis of Non-Protein Amino Acids . . . . .	424
5 The Distribution of Non-Protein Amino Acids . . . . .	424
6 Ecological Significance of Non-Protein Amino Acids . . . . .	425
References . . . . .	425

## 8 Plant Amines

T.A. SMITH

1 Introduction . . . . .	433
2 Aliphatic Monoamines . . . . .	436
3 Di- and Polyamines . . . . .	441
3.1 Growth Effects . . . . .	441
3.2 Effect of Mineral Nutrition on Amine Metabolism . . . . .	443
3.3 Biosynthesis of the Di- and Polyamines . . . . .	443
3.4 Polyamine Conjugates . . . . .	444
4 Amine Oxidases . . . . .	445
5 Histamine . . . . .	448
6 Tryptamines . . . . .	449
7 Phenethylamines . . . . .	449
References . . . . .	454

## 9 Cyanogenic Glycosides

E.E. CONN (With 10 Figures)

1 Introduction . . . . .	461
2 Structure and General Chemical Properties . . . . .	461
2.1 Structure . . . . .	461
2.2 Properties of Cyanogenic Glycosides . . . . .	466

3	Detection, Isolation, and Characterization . . . . .	470
3.1	Detection of Cyanogenic Glycosides . . . . .	470
3.2	Isolation . . . . .	472
3.3	Characterization . . . . .	473
4	Distribution . . . . .	474
4.1	Occurrence of Cyanogenesis . . . . .	474
4.2	Natural Distribution . . . . .	475
4.3	Literature on Cyanogens in Plants . . . . .	477
5	Metabolism of Cyanogenic Glycosides . . . . .	477
5.1	Biosynthesis . . . . .	477
5.2	Catabolism in Plants . . . . .	485
6	Physiological Role of Cyanogenic Glycosides . . . . .	487
	References . . . . .	487

## 10 Glucosinolates

E. W. UNDERHILL (With 4 Figures)

1	Introduction . . . . .	493
2	General Structure and Nomenclature . . . . .	493
3	Glucosinolate Side Chains . . . . .	495
4	Occurrence . . . . .	495
5	Myrosinase and Glucosinolate Hydrolytic Products . . . . .	496
6	Glucosinolates and Myrosinase in Plant Cell Cultures . . . . .	499
7	Quantitative Analysis . . . . .	500
8	Biosynthesis . . . . .	500
8.1	Glucosinolates from Amino Acids . . . . .	501
8.2	Intermediates Between Amino Acids and Glucosinolates . . . . .	502
8.3	Glucosinolate Interconversions . . . . .	504
9	Elimination of Glucosinolates Through Plant Breeding . . . . .	505
	References . . . . .	506

## 11 Betalains

T. J. MABRY (With 10 Figures)

1	Introduction . . . . .	513
2	Naturally Occurring Betalains in the Centrospermae . . . . .	513
2.1	Betacyanins . . . . .	513
2.2	Betaxanthins . . . . .	518
2.3	Betalamic Acid . . . . .	520
3	Detection and Isolation of Betalains . . . . .	521
4	Biogenesis of Betalains . . . . .	523
4.1	Extra-Diol Cleavage of L-DOPA to Betalamic Acid . . . . .	523
4.2	Incorporation of Labeled Precursors . . . . .	524
4.3	Control of Betalain Biogenesis . . . . .	524
5	Synthesis of Betalains . . . . .	524
6	Function of Betalains . . . . .	526
7	Phylogenetic Significance of Betalains with Respect to the Centrospermae . . . . .	527
7.1	Sieve-Element Plastids . . . . .	528
7.2	C <sub>4</sub> Photosynthesis in the Centrospermae . . . . .	529
7.3	DNA-RNA Hybridization Data . . . . .	529
7.4	Summary . . . . .	529
8	Betalains in Mushrooms . . . . .	530
	References . . . . .	530

## 12 Plant Lipids of Taxonomic Significance

G. A. THOMPSON, Jr. (With 10 Figures)

1	Introduction . . . . .	535
2	Fatty Acids . . . . .	535

2.1 Commonly Occurring Fatty Acids . . . . .	535
2.2 Fatty Acids of Unusual Structure . . . . .	539
2.3 The Use of Fatty Acids for Taxonomic Purposes . . . . .	541
3 Waxes . . . . .	542
3.1 Hydrocarbons . . . . .	542
3.2 Secondary Alcohols and Ketones . . . . .	543
3.3 Wax Esters . . . . .	544
3.4 Fatty Acids and Fatty Alcohols . . . . .	544
3.5 The Use of Waxes as a Taxonomic Tool . . . . .	544
4 Cutin . . . . .	545
4.1 The Nature and Origin of Cutin Monomers . . . . .	545
4.2 The Use of Cutin Monomers for Taxonomic Purposes . . . . .	546
5 Suberin . . . . .	547
6 Polyketides . . . . .	548
7 Acetylenic Compounds . . . . .	549
7.1 The Nature and Metabolism of Acetylenes . . . . .	549
7.2 The Use of Acetylenes for Taxonomic Purposes . . . . .	549
8 Cyanolipids . . . . .	550
References . . . . .	551

### 13 Plant Carbohydrates

A.M. STEPHEN

1 Introduction . . . . .	555
2 Arabinans, Galactans and Arabinogalactans . . . . .	557
3 Plant Gum Exudates Based on Arabinogalactan Structures . . . . .	558
3.1 <i>Acacia</i> Gums in Relation to Species of Origin . . . . .	559
3.2 Gums, Mainly of Arabinogalactan Type, from Other Genera, Families, and Orders . . . . .	563
4 Plant Polysaccharide Gums of the D-Galacturono-L-Rhamnan Type . . . . .	568
4.1 Apiogalacturonans . . . . .	568
5 Gum Exudates of D-Xylan Type . . . . .	569
6 Polysaccharide Components of Bark and Seeds . . . . .	570
6.1 Xyloglucans from Cotyledon Cell Walls and from Endosperm . . . . .	570
6.2 Galactomannans . . . . .	571
6.3 Glucomannans . . . . .	572
6.4 Acidic Polysaccharides . . . . .	572
7 Carbohydrates of Marine Algae . . . . .	573
7.1 Polysaccharides of Phaeophyta . . . . .	574
7.2 Polysaccharides of Rhodophyta . . . . .	575
7.3 Polysaccharides of Chlorophyta . . . . .	576
8 Conclusion . . . . .	577
References . . . . .	578
