

Contents

Preface to the third edition	xix
Technical notes	1
Section one Laboratory work	3
Chapter 1 Safety in laboratories	5
<i>General safety measures</i>	5
Laboratory safety equipment	5
Safety notices	5
Personal protection	5
Dangers to avoid	6
<i>Chemical hazards</i>	7
Corrosive and irritant substances	7
Toxic compounds	7
Flammability hazards	8
Explosives	8
<i>Physical hazards</i>	9
Fire	9
Pressure	10
Ionizing radiation	10
Non-ionizing radiation	11
<i>Biological hazards</i>	12
Micro-organisms	12
Animals and body fluids	13
Genetic engineering	13
<i>Spillage and waste disposal</i>	14
Spillages	14
Waste disposal	14
<i>First aid</i>	15
Immediate assistance	15
Burns	16
Eye injuries	16
Bleeding	16
Toxic materials	17
<i>Further reading</i>	17

Chapter 2 Accuracy	18
<i>SI units</i>	18
Basic units	18
Derived units	18
Prefixes	19
Physical constants	20
<i>Units used in conjunction with SI</i>	20
Litre	20
Gram	20
Minute	20
<i>Molarity and moles</i>	21
Mole (mol)	21
Molarity (mol/litre)	21
Mass concentration	21
Relationship of molarity and moles	22
<i>Simple biochemical calculations</i>	22
<i>Accurate measurement</i>	23
The sources of error	23
The normal distribution curve	25
Biological variation	27
Significant figures	28
<i>Writing up the experiment</i>	28
The recording of results	29
Tables and illustrations	30
<i>Experiments</i>	33
Experiment 2.1 The calibration of laboratory pipettes	33
Experiment 2.2 The accuracy and precision of the assay for inorganic phosphate	33
<i>Further reading</i>	34
Chapter 3 pH and buffer solutions	35
<i>Acids and bases</i>	35
Definitions	35
Strength	35
<i>Hydrogen ion concentration and pH</i>	36
Definition of pH	36
Dissociation of water	36
<i>Dissociation of acids and bases</i>	37
Strong acids	37
Weak acids	37
<i>Measurement of pH</i>	39
pH indicators	39
Accurate measurement of pH	39

<i>Titration curves</i>	42
Strong acid and a strong base	42
Weak acid and a strong base	42
<i>Buffer solutions</i>	42
Theory	42
Buffers used in biochemical experiments	44
<i>pH and life</i>	45
Animals	45
Plants	46
Bacteria	46
<i>Practical exercises</i>	47
The care and use of the pH meter	47
Titration curves	48
<i>Experiments</i>	49
Experiment 3.1 The determination of pH using indicators	49
Experiment 3.2 Titration of a mixture of a strong and a weak acid	49
Experiment 3.3 Titration of a strong acid with a strong base	50
Experiment 3.4 Titration of a weak acid with a strong base	50
Experiment 3.5 The determination of pK_a	51
Experiment 3.6 pK_a values of a dicarboxylic acid	51
Experiment 3.7 Acetate buffers	52
Experiment 3.8 Titration curves of amino acids	53
<i>pH calculations</i>	54
<i>Further reading</i>	54
Section two Chemical and physical techniques	55
Chapter 4 Chromatography	57
<i>General introduction</i>	57
Principles of chromatography	57
Column chromatography	59
Paper chromatography	61
Thin layer chromatography	64
<i>Experiments</i>	65
Adsorption chromatography	65
Experiment 4.1 The separation of leaf pigments by adsorption chromatography	66
Ion exchange chromatography	67
Experiment 4.2 The separation of amino acids by ion exchange chromatography	70
Experiment 4.3 The separation of proteins by ion exchange chromatography	72
Partition chromatography	72
Experiment 4.4 The separation of amino acids by two-dimensional paper chromatography	73

Experiment 4.5 The identification of sugars in fruit juices using thin layer chromatography	75
Experiment 4.6 The separation of lipids by thin layer chromatography	76
Gel filtration	77
Experiment 4.7 The separation of blue dextran and cobalt chloride on Sephadex G25.	80
Experiment 4.8 The separation of proteins by gel filtration	80
Affinity chromatography	82
Experiment 4.9 The preparation of an affinity column	83
Experiment 4.10a The preparation of rat brain acetylcholinesterase	86
Experiment 4.10b The assay of acetylcholinesterase	87
Experiment 4.10c Purification of acetylcholinesterase by affinity chromatography	88
<i>Further reading</i>	90
Chapter 5 Electrophoresis	91
<i>Theory and practice</i>	91
Electrophoretic mobility	91
Zone electrophoresis	91
Buffer solution	92
Electrical field	93
Electrophoresis apparatus	93
<i>Experiments</i>	94
Experiment 5.1 The separation of amino acids by paper electrophoresis	94
Experiment 5.2 The separation of serum proteins by electrophoresis on cellulose acetate	95
Experiment 5.3 The identification of proteins by electrophoresis following the fractionation of human blood plasma	96
Experiment 5.4 Polyacrylamide-gel electrophoresis	97
Experiment 5.5 Isolation of lactate dehydrogenase isoenzymes by starch-block electrophoresis	100
Experiment 5.6 SDS-gel electrophoresis	103
Experiment 5.7 Gradient-gel electrophoresis of proteins and multiple molecular forms of acetylcholinesterase	105
<i>Further reading</i>	107
Chapter 6 Immunochemical methods	108
<i>Immunology</i>	108
The immune response	108
The antibody-antigen reaction	108
Immunoglobulins	109
Immunochemical assays	110

<i>Experiments</i>	112
Experiment 6.1 Quantitative precipitin test	112
Experiment 6.2 Ouchterlony immunodiffusion	113
Experiment 6.3 Purification of immunoglobulins by ion exchange chromatography	114
Experiment 6.4 Immunoelectrophoresis	116
Experiment 6.5 The determination of albumin by radial immunodiffusion	117
Experiment 6.6 The determination of albumin by Laurell rocket immunoelectrophoresis	119
Experiment 6.7 The detection and assay of a myeloma protein	120
<i>Further reading</i>	121
Chapter 7 Spectrophotometry	122
<i>Colorimetry</i>	122
Why solutions are coloured	122
The Beer–Lambert law	122
Measurement of extinction	125
<i>UV and visible spectrophotometry</i>	126
Absorptiometric analysis	126
Absorption spectra	128
Some practical points	128
<i>Experiments</i>	130
Experiment 7.1 The absorbance curves of two dyes	130
Experiment 7.2 Demonstration of Beer's law	130
Experiment 7.3 The colorimetric estimation of inorganic phosphate	131
Experiment 7.4 The validity of Beer's law for the colorimetric estimation of creatinine	132
Experiment 7.5 The absorption spectrum of <i>p</i> -nitrophenol	132
Experiment 7.6 Determination of the pK_a value of <i>p</i> -nitrophenol	132
Experiment 7.7 The estimation of barbiturates with the ultraviolet spectrophotometer	134
Experiment 7.8 Experiments with haemoglobin	136
Experiment 7.9 The ultraviolet absorption of proteins and amino acids	137
<i>Fluorescence spectroscopy</i>	138
Fluorescence	138
Quenching	138
Applications	138
Intensity of fluorescence and concentration	139
Fluorimeters	140
Experiment 7.10 The sensitivity of fluorescence assays	140
Experiment 7.11 Fluorescence quenching	141
Experiment 7.12 The measurement of α -naphthyl phosphatase activity	142
<i>Calculations</i>	143
<i>Further reading</i>	145

Section three Molecules of the biosphere	147
Chapter 8 Amino acids and proteins	149
<i>Chemical and physical properties</i>	149
Chemistry of the amino acids	149
The amino acid composition of proteins	151
Protein structure	153
<i>Function in the living organism</i>	155
Amino acids	156
Peptides	157
Proteins	157
<i>Assay methods</i>	158
Experiment 8.1 The quantitative estimation of amino acids using the ninhydrin reaction	158
Experiment 8.2 Biuret assay	159
Experiment 8.3 The Folin–Lowry method of protein assay	159
Experiment 8.4 A comparison of the various methods of protein estimation	160
<i>The isolation of proteins</i>	160
Experiment 8.5 The isolation of casein from milk	160
Experiment 8.6 The preparation and properties of cytochrome c	161
<i>Protein structure</i>	163
Experiment 8.7 The identification of the C-terminal amino acid of a protein	163
Experiment 8.8 The determination of the free amino end group of some proteins	164
Experiment 8.9 The detection of changes in the conformation of bovine serum albumin by viscosity measurements	165
Experiment 8.10 The effect of pH on the conformation of bovine serum albumin	167
<i>Further reading</i>	167
Chapter 9 Carbohydrates	168
<i>The function of carbohydrates in the biosphere</i>	168
A source of energy	168
Structure of cells and molecules	169
<i>The structure of carbohydrates</i>	169
Introduction	169
Stereochemistry	169
The glycosidic link	172
Simple monosaccharide derivatives	173
<i>Carbohydrates of biochemical importance</i>	175
Simple sugars	175
Macromolecules	175
<i>Chemical properties</i>	176
Experiment 9.1 Benedict's test for reducing sugars	176

Experiment 9.2 Iodine test for polysaccharides	177
Optical activity	177
Experiment 9.3 The mutarotation of glucose	178
<i>Quantitative determination of carbohydrates</i>	179
Experiment 9.4 Estimation of carbohydrates by the anthrone method	179
Experiment 9.5 Determination of reducing sugars using 3,5-dinitrosalicylic acid	180
Experiment 9.6 The determination of glucose by means of the enzyme glucose oxidase (β -D-glucose: oxygen oxidoreductase, 1.1.3.4)	181
<i>Experiments with polysaccharides</i>	182
Experiment 9.7 The isolation and assay of glycogen from the liver and skeletal muscle of rats	182
Experiment 9.8 The acid hydrolysis of polysaccharides	184
Experiment 9.9 Enzymic hydrolysis of glycogen by α - and β -amylase	185
Experiment 9.10 The breakdown of glycogen and the production of glucose-1-phosphate by muscle phosphorylase	186
<i>Further reading</i>	188
Chapter 10 Lipids	189
<i>Classification and biological role of lipids</i>	189
Simple lipids	189
Compound lipids	191
Derived lipids	193
<i>Quantitative analysis of lipids</i>	195
Experiment 10.1 The determination of the acid value of a fat	195
Experiment 10.2 The saponification value of a fat	195
Experiment 10.3 The iodine number of a fat	196
Experiment 10.4 The estimation of blood cholesterol	197
<i>The separation and isolation of lipids</i>	199
Experiment 10.5 The lipid composition of wheat grain	199
Experiment 10.6 The preparation of cholesterol from brain	199
<i>Fat-soluble vitamins</i>	200
Experiment 10.7 The effect of ultraviolet light on vitamin A	200
Experiment 10.8 Preparation of the D vitamins by irradiation of their precursors with ultraviolet light	202
<i>Further reading</i>	204
Chapter 11 Nucleic acids	205
<i>Chemical composition of the nucleic acids</i>	205
Purines	206
Pyrimidines	206
The pentose sugars	206
Nucleosides	207

Nucleotides	207
Nucleic acids	208
<i>The biological role of nucleic acids</i>	210
DNA	210
RNA	211
Nucleic acids of viruses	211
<i>Experiments</i>	211
Experiment 11.1 The isolation of RNA from yeast	211
Experiment 11.2 Electrophoresis of RNA nucleotides	212
Experiment 11.3 The separation of RNA nucleotides by ion exchange chromatography	213
Experiment 11.4 The base composition of RNA	215
Experiment 11.5 The isolation of DNA from pig spleen	216
Experiment 11.6 The ultraviolet absorption of the nucleic acids	217
Experiment 11.7 The viscosity of DNA solutions	219
Experiment 11.8 The estimation of DNA by the diphenylamine reaction	220
Experiment 11.9 The estimation of RNA by means of the orcinol reaction	221
Experiment 11.10 The determination of the phosphorus content of a nucleic acid	221
<i>Further reading</i>	222
Section four Metabolic studies	223
Chapter 12 Enzymes	225
<i>Enzymes as catalysts</i>	225
Catalysis	225
Classification	225
<i>Measuring enzyme activity</i>	226
Enzyme assay	226
Controls	226
Progress curve	226
Enzyme units	226
<i>Enzyme activity and substrate concentration</i>	227
Michaelis–Menten enzymes	227
Allosteric enzymes	229
<i>Factors affecting enzyme activity</i>	232
Cofactors	232
Inhibitors	232
Temperature	234
pH	235
<i>Experiments</i>	236
Experiment 12.1 The progress curve obtained during the hydrolysis of <i>p</i> -nitrophenyl phosphate by serum alkaline phosphatase (orthophosphoric acid monoester phosphohydrolase, 3.1.3.1)	236

Experiment 12.2 Variation of serum alkaline phosphatase activity with enzyme concentration	237
Experiment 12.3 The effect of substrate concentration and inhibitors on ox heart lactate dehydrogenase	238
Experiment 12.4 The effect of temperature on the activity of α -amylase	240
Experiment 12.5 The determination of the molecular weight and purity of chymotrypsin from the enzyme kinetics	241
Experiment 12.6 Yeast isocitrate dehydrogenase: an allosteric enzyme	243
Experiment 12.7 The isolation of muramidase (mucopeptide <i>N</i> -acetylmuramyl hydrolase, 3.2.1.17) from egg white	244
Experiment 12.8 Separation of the isoenzymes of lactate dehydrogenase by electrophoresis on polyacrylamide-gel	247
Experiment 12.9 Some properties of lactate dehydrogenase isoenzymes	249
<i>Further reading</i>	249
Chapter 13 Membranes	250
<i>Composition of membranes</i>	250
Phospholipids	250
Cholesterol and other lipids	250
Proteins	252
<i>Membrane transport</i>	252
Diffusion	252
Facilitated diffusion	252
Active transport	253
<i>Experiments</i>	253
Experiment 13.1 The effect of lipid composition on the permeability of a lipid monolayer	253
Experiment 13.2 The effect of detergents and other membrane-active reagents on the erythrocyte membrane	254
Experiment 13.3 The permeability of model membranes (liposomes) to anions	255
Experiment 13.4 The effect of cholesterol on the anion permeability of a phospholipid membrane	257
Experiment 13.5 The effect of insulin on the transport of glucose into isolated fat cells	258
Experiment 13.6 The transport of amino acids across the small intestine	259
Experiment 13.7 The absorption of xylose from the gut in man	263
<i>Further reading</i>	264
Chapter 14 Cell fractionation	265
<i>Cell structure</i>	265
Basic cellular architecture	265
Practical cell fractionation	267
<i>Experiments</i>	268
Experiment 14.1 The fractionation of rat liver	268

Experiment 14.2 The estimation of DNA, RNA and protein in the isolated cell fractions	270
Experiment 14.3 The distribution of enzymes in the cell	272
Experiment 14.3a Glucose-6-phosphatase	273
Experiment 14.3b Glutamate dehydrogenase	274
Experiment 14.3c Acid phosphatase	275
Experiment 14.3d Lactate dehydrogenase	276
Experiment 14.4 Mitochondrial swelling	276
Experiment 14.5 The determination of lysosomal integrity	277
Experiment 14.6 The effect of detergents on the stability of the lysosomal membrane	279
Experiment 14.7 The fractionation of pig brain by density gradient centrifugation	281
Experiment 14.8 The distribution of enzymes in the fractions obtained from pig brain	284
<i>Further reading</i>	286
Chapter 15 Photosynthesis and respiration	287
<i>The oxygen electrode</i>	287
Theory	287
Practice	288
<i>Experiments</i>	289
Photosynthesis	289
Experiment 15.1 The isolation of chloroplasts from spinach leaves	289
Experiment 15.2 The evolution of oxygen by isolated chloroplasts using Hill oxidants	291
Experiment 15.3 Methyl viologen as a terminal electron acceptor	292
Experiment 15.4 The spectrophotometric assay of the Hill reaction and the estimation of chlorophyll	293
Oxidation and reduction in living cells	295
Electron transport chain	295
Experiment 15.5 The respiration of mitochondria and oxidative phosphorylation	295
Experiment 15.6 The effect of inhibitors on the respiratory chain	299
Experiment 15.7 Compounds that affect the high energy state of mitochondria	299
Experiment 15.8 Calcium transport in mitochondria	300
<i>Further reading</i>	301
Chapter 16 Molecular biology	302
<i>Definition</i>	302
<i>Relationship to biochemistry</i>	302

<i>Experiments</i>	303
Experiment 16.1 Induction of β -galactosidase in strains of <i>Escherichia coli</i> (i^+ and i^-)	303
Experiment 16.2 The effect of different inducers on the induction of β -galactosidase	306
Experiment 16.3 The effect of protein synthesis inhibitors on the induction of β -galactosidase	307
Experiment 16.4 Turnover of β -galactosidase	307
Experiment 16.5 Reticulocytes and their use in the study of protein synthesis	307
Experiment 16.6 Protein synthesis in intact rabbit reticulocytes	309
Experiment 16.7 Protein synthesis in reticulocyte lysates	310
Experiment 16.8 Compounds that affect the rate of protein synthesis in reticulocyte lysates	312
Experiment 16.9 The isolation of bacterial DNA	312
Experiment 16.10 The isolation and characterization of eukaryotic mRNA	315
Experiment 16.11 Translation of mRNA from reticulocyte lysates	317
<i>Further reading</i>	318
Appendix	319
Index	325
