

## Contents

### Transport and Transformation of Chemicals: A Perspective

*G. L. Baughman and L. A. Burns*

Introduction .....	1
Predicting the Fate of Organic Toxicants .....	2
Physical Models .....	2
Mathematical Models .....	3
Process Models .....	3
Volatilization .....	5
Abiotic Hydrolysis .....	6
Microbial Transformations .....	6
Photolysis .....	7
Chemical Oxidation .....	8
Sorption .....	8
Methods for Estimating Parameters .....	9
Mathematical Systems Models .....	10
Temporal Resolution .....	12
Spatial Resolution .....	13
Sensitivity, Confidence, and Validation .....	13
Sensitivity .....	14
Confidence .....	14
Validation .....	15
Transport and Transformation in Perspective .....	15
References .....	16

### Transport Processes in Air

*J. W. Winchester*

Introduction .....	19
Reactive and Unreactive Gases .....	19
Properties of Aerosols .....	21
Transport of Sulfates .....	23
Global Significance of Transport Processes in Air .....	27
References .....	30

## **Solubility, Partition Coefficients, Volatility, and Evaporation Rates**

*D. Mackay*

Solubility and Partition Coefficients .....	31
Introduction .....	31
Solubility .....	32
Electrolytes .....	32
Gases .....	32
Non-Electrolyte Solids and Liquids .....	33
Octanol-Water Partition Coefficients .....	34
Data Compilations .....	35
References .....	36
Volatility and Evaporation Rates .....	36
Introduction .....	36
Thermodynamics .....	37
Vapor Pressure .....	37
Calculation of Partial Pressure .....	38
Calculation of Mass Transfer Coefficients .....	40
Environmental Applications .....	43
Direct Evaporation of Liquids and Solids .....	43
Evaporation of a Solute from Aqueous Solution .....	43
Evaporation from Soils .....	44
References .....	45

## **Adsorption Processes in Soil**

*P. M. Huang*

Introduction .....	47
Surface Charge of Major Components of Soils .....	47
Negative Charge .....	47
Positive Charge .....	49
Isoelectric Point and Zero Point Charge .....	50
Cation Adsorption .....	50
Anion Adsorption .....	53
Molecular Adsorption .....	54
Adsorption Isotherms .....	55
Impact of Adsorption Processes in Soil and Environmental Sciences ..	56
References .....	58

## **Sedimentation Processes in the Sea**

*K. Kranck*

Composition of Sediments .....	62
Terrigenous Detritus .....	62
Biogenic Material .....	62

Organic Matter .....	63
Scavenged Natural and Anthropogenic Chemicals .....	63
Mechanics of Sedimentation .....	64
Single Grain .....	64
Flocs and Aggregates .....	66
Depositional Environments .....	70
Rivers and Lakes .....	70
Estuaries .....	71
Oceanic Waters .....	71
Near Shore Environments .....	73
References .....	73

## Chemical and Photo Oxidation

*T. Mill*

Introduction .....	77
General Considerations .....	78
Oxidants in Aquatic Systems .....	78
Oxidants in the Troposphere .....	79
Chemical Oxidation .....	80
General Considerations .....	80
Radical Oxidants $RO_2\cdot$ , $RO\cdot$ , and $HO\cdot$ .....	81
Singlet Oxygen ( $^1O_2$ ) and Ozone .....	84
Measurement of $k_{RO_2}$ for $RO_2$ Oxidations at CH Bonds .....	86
Measurement of $k_{RO_2}$ at OH or NH Bonds .....	88
Measurement of $k_{HO}$ in Water and Air .....	89
Measurement of $k_{OX}$ for $^1O_2$ Oxidations .....	89
Solvent and Phase Effects on Oxidation Reactions .....	91
Temperature Effects in Oxidation .....	93
Photooxidations .....	94
Mechanism of Photooxidations .....	94
Kinetics of Photooxidation .....	95
Effect of Solvent, Phase and Oxygen on Quantum Yield .....	95
Measurement of $\phi$ and $k_p$ .....	96
Structure-Reactivity Correlations (SRC) for Oxidation Processes .....	97
SRC for Radical Oxidants .....	97
SRC for $^1O_2$ and $O_3$ .....	98
Review of Environmental Oxidation Studies .....	98
Oxidation in Water .....	98
Oxidation in Air .....	102
References .....	104

**Atmospheric Photochemistry***T. E. Graedel*

Introduction	107
Photochemistry in the Earth's Troposphere	108
Tropospheric Chemistry Over the Deserts	108
Tropospheric Chemistry Over the Steppes and Mountains	111
Tropospheric Chemistry Over Grasslands	111
Tropospheric Chemistry Over Forests	112
Tropospheric Chemistry Over Marshlands	113
Tropospheric Chemistry Over the Open Oceans	114
Natural Point Sources of Trace Gases	115
Tropospheric Chemistry Over Urban Areas	117
Summary	120
Photochemistry in the Earth's Stratosphere	121
The Natural Stratosphere	121
Stratospheric Chemistry Following the Injection of Volcanic Material	123
Stratospheric Chemistry Following Anthropogenic N <sub>2</sub> O Injection	124
Stratospheric Chemistry Following Anthropogenic NO <sub>x</sub> Injection	125
Stratospheric Chemistry Following Anthropogenic Fluorochlorocarbon Injection	125
Summary	126
Concentrations of Selected Species in Different Atmospheric Regimes	127
Carbon Compounds	128
Nitrogen Compounds	130
Sulfur Compounds	133
Halogenated Compounds	134
Molecular Hydrogen	137
Ozone	138
Total Particulate Matter	138
Concluding Remarks	139
References and Notes	140

**Photochemistry at Surfaces and Interphases***H. Parlar*

Introduction	145
Heterogeneous Photocatalysis	145
Photochemical Reactions of Environmental Chemicals on Surfaces	146
Ultraviolet Behaviour of Adsorbed Environmental Chemicals	147
The Influence of Atmospheric Dust on Photochemical Reactions of Organic Chemicals	151
Heterogeneous Photodecomposition of Environmental Chemicals in the Atmosphere	152
Conclusions	158
References	158

**Microbial Metabolism***D. T. Gibson*

Introduction .....	161
General Features of Microbial Metabolism .....	163
Role of Oxygen in Microbial Metabolism .....	165
Cooxidation and Cometabolism .....	165
Degradation of Organic Compounds by Microbial Communities .....	167
Aerobic Metabolism .....	169
Methane .....	169
Linear Alkanes .....	173
Branched Alkanes .....	174
Alicyclic Hydrocarbons and Related Compounds .....	177
Aromatic Hydrocarbons and Related Compounds .....	180
Conclusions .....	187
References .....	189

**Plant Uptake, Transport and Metabolism***I. N. Morrison and A. S. Cohen*

Introduction .....	193
Uptake and Transport .....	194
Foliar Uptake .....	194
Root Absorption .....	200
Translocation .....	201
Environmental Influences and Plant Age .....	204
Interactions .....	205
Metabolism .....	206
General Considerations .....	206
Reaction Types and Comparative Biochemistry .....	207
Specific Metabolism in Plants .....	209
Interactions .....	213
Environmental Mutagenesis and Metabolic Activation .....	214
References .....	215

**Metabolism and Distribution by Aquatic Animals***V. Zitko*

Introduction .....	221
Uptake and Transport .....	221
Metabolism and Excretion .....	224
References .....	228

**Laboratory Microecosystems***A. R. Isensee*

Introduction .....	231
Laboratory Microecosystems .....	231
Basic Types and Uses .....	232
Microecosystem Dynamics .....	233
Microecosystem Approach to Environmental Chemistry .....	234
Aquatic Laboratory Microecosystems .....	235
Terrestrial Laboratory Microecosystems .....	239
Role of Microecosystems in Future Environmental Research .....	244
References .....	244

**Reaction Types in the Environment***C. M. Menzie*

Ring Hydroxylation .....	248
Ether Cleavage .....	251
Sulfoxide/Sulfone Formation .....	253
Dehydrogenation/Dehalogenation/Dehydrohalogenation .....	258
Reduction .....	260
Conjugation .....	263
Hydrolysis .....	269
<i>N</i> -Demethylation/Oxidation .....	274
Epoxide Formation .....	277
Exchange Reaction .....	280
Photolytic Effects .....	283
References .....	290

<b>Subject Index</b> .....	<b>303</b>
