CHAPTER 1	FUNDAMENTALS OF LINEAR MOTOR TECHNOLOGY .....	1
1.1	Symbols and Standards •	1
1.2	Operating Principles and Types of Linear Motors •	4
1.3	Acronyms •	6
1.4	Practical Limits on Linear Motor Performance and Applications •	6
	References •	8
CHAPTER 2	INTRODUCTION TO LINEAR MOTORS .....	9
2.1	Basic Differences Between LEMs and Rotating Machines •	11
2.2	A Broad Classification of Linear Motors •	16
2.3	Applications of LEMs •	24
2.3.1	High-speed applications •	26
2.3.2	Low-speed and standstill applications •	27
2.3.3	Applications of energy machines •	34
	References •	41
CHAPTER 3	LINEAR INDUCTION MOTORS.....	43
3.1	Criteria for LIM Performance •	44
3.2	Construction Details •	45
3.2.1	Flat LIMs •	45
3.2.2	Tubular LIMs •	50
3.3	Field Analysis •	55
3.3.1	An idealized LIM with an infinitely thick secondary •	56
3.3.2	An idealized LIM with a secondary of finite thickness •	57
3.3.3	The concept of current sheet •	59
3.3.4	The airgap field equation •	61
3.3.5	A design criterion: The goodness factor •	63
3.4	Certain Realistic Considerations •	64
3.4.1	Airgap leakage due to large airgaps •	64

3.4.2	Skin effect due to finite plate thickness	• 65
3.4.3	Edge effects due to secondary overhangs	• 66
3.4.4	End effects	• 69
3.5	LIM Equivalent Circuit	• 72
3.6	Performance Calculations	• 74
3.7	Selection and an Application of a LIM	• 77
3.8	Design Considerations	• 78
3.8.1	Airgap	• 78
3.8.2	Pole pitch	• 78
3.8.3	Number of poles	• 79
3.8.4	Overhang correction factor	• 79
3.8.5	Primary core	• 80
3.8.6	Steps in design	• 82
3.8.7	Criteria for a good design	• 82
3.9	The Tubular LIM (TLIM)	• 84
3.9.1	An example of the design of a TLIM	• 87
	References	• 89

## CHAPTER 4 LINEAR SYNCHRONOUS MOTORS ..... 91

4.1	Principle of Operation	• 91
4.2	Types of LSMs	• 93
4.3	Iron-Core Heteropolar LSM	• 98
4.3.1	LSM with conventional field winding	• 99
4.4	Permanent Magnet Heteropolar LSM (PMLSM)	• 108
4.5	Air Core LSM	• 113
4.6	Linear Homopolar Synchronous Motor (LHSM)	• 118
4.6.1	Expressions for the parameters	• 121
4.7	LSM Control	• 127
4.7.1	A typical static power converter for LSM	• 127
4.7.2	Encoders	• 130
4.8	Note on Testing LSMs	• 132
	References	• 132

## CHAPTER 5 DC LINEAR MOTORS ..... 135

5.1	Introduction	• 135
5.2	Iron-Core Tubular Homopolar DCLM	• 140
5.2.1	Design guidelines and an example	• 143
5.3	Electronically Commutated DCLM	• 144
5.3.1	Basic circuit equations	• 146
5.4	Electromagnetic Launchers	• 150
5.4.1	Principle of operation	• 150

5.4.2	Basic equations	•	153
5.4.3	Power sources and control of EMLs	•	155
References		•	156
CHAPTER 6	LINEAR STEPPER MOTORS	.....	159
6.1	Advantages and Disadvantages of LSTMs	•	160
6.2	Principle of Operation	•	161
6.2.1	VR-LSTM	•	161
6.2.2	Hybrid PM-LSTM	•	164
6.3	Static Holding Thrust	•	166
6.4	Modeling of LSTM	•	168
6.5	Measurements of LSTM Inductances	•	170
6.5.1	Average inductance	•	170
6.5.2	Incremental inductance	•	172
6.5.3	PM flux derivative	•	172
6.6	Note on Computation of Inductances	•	174
6.7	Drive Control	•	180
6.7.1	Logic sequencers	•	180
6.7.2	Power drivers	•	182
6.7.3	LSTM control	•	186
6.8	LSTM Design Guidelines	•	188
6.9	Applications	•	193
References		•	195
CHAPTER 7	ELECTROMAGNETIC LEVITATION AND SUSPENSION	.....	197
7.1	Types of LLMs	•	198
7.2	Certain Basic Configurations	•	199
7.3	Levitation Goodness Factor and Levitation Stiffness	•	202
7.3.1	Levitation goodness factor	•	202
7.3.2	Static stability of the repulsion LLM	•	203
7.3.3	Static instability of the attraction LLM	•	204
7.4	Repulsion-Type LLMs	•	205
7.4.1	Single-sided repulsion LLM with sheet track	•	206
7.4.2	Simplified expressions for levitation and drag forces	•	207
7.4.3	Dynamics of the single-sided repulsion LLM	•	210
7.4.4	Repulsion LLM with ladder secondary	•	214
7.4.5	Lift and drag forces in a LLM with ladder secondary	•	216
7.4.6	Double-magnet LLM	•	219
7.4.7	Null-flux LLM	•	220

7.5	Electromagnetic Bearings (EMBs)	•	222
7.5.1	Passive and active EMBs	•	222
7.5.2	An example	•	223
7.5.3	Certain practical considerations	•	226
	References	•	230

## CHAPTER 8 LINEAR MOTION OSCILLATORS ..... 233

8.1	Introduction	•	233
8.2	Some Basic Configurations	•	234
8.3	Iron Core Homopolar LMO	•	239
8.4	Permanent Magnet Linear Motor Oscillator (PMLMO)	•	242
8.5	The Solenoid Linear Oscillating Motor (LOM)	•	244
8.5.1	Power circuitry, dynamics, and control	•	248
8.6	Repulsion-Type LOM	•	249
	References	•	252

## CHAPTER 9 TESTS ON LINEAR MOTORS ..... 253

9.1	Belt Experiments	•	254
9.2	Wheel Experiments	•	260
9.3	Track Experiments	•	262
9.4	Tests by Simulation	•	263
	References	•	268
