Parameters in the theory of visual attention (TVA) *xv*

## Introduction

### 1 Introduction 3

## Part 1 **The psychology of visual attention**

### 2 Psychological research on visual attention 9

2.1 Setting the stage 10

2.2 Classic formal frameworks 12

2.2.1 Signal detection theory 12

2.2.2 Choice theory 14

2.3 Early demonstrations of capacity limitations in vision 14

2.4 Simple serial models 16

2.4.1 Feature and conjunction search 16

2.4.2 Feature integration theory (FIT) 18

2.4.3 Problems with FIT 19

2.5 Simple parallel models 19

2.6 Distractor interference 21

2.6.1 Stroop and flanker interference 22

2.6.2 Negative priming 23

2.6.3 The locus of selection revisited 24

2.7 Attentional capture and voluntary control 24

2.7.1 Attentional capture 24

2.7.2 Partial report 25

2.8 Attentional orienting, shifting, and dwelling 26

2.8.1 Set for spatial position 26

2.8.2 Spotlight and zoom-lens models 28

2.8.3 Set for size and orientation 29

2.8.4 Attentional blink and dwell time 29

- 2.9 Selective serial models 32
  - 2.9.1 Hoffman's model of visual search 32
  - 2.9.2 The guided search model 32
  - 2.9.3 Problems with the guided search model 33
- 2.10 Selective parallel models 36
  - 2.10.1 Limited-capacity parallel models 36
  - 2.10.2 Race models of selection 36
- 2.11 Connectionist models 37
- 2.12 Summary 39
- 3 A psychological theory of visual attention (TVA) 41
  - 3.1 A new approach to visual selection 42
  - 3.2 Choice models of recognition and selection 44
    - 3.2.1 The biased choice model 45
    - 3.2.2 The choice model for partial report 47
  - 3.3 Race models of selection 50
    - 3.3.1 Central concepts of the race model framework 50
    - 3.3.2 FIRM: an exponential fixed-capacity model 54
  - 3.4 TVA: a unified theory of recognition and selection 58
    - 3.4.1 Central assumptions and equations 60
    - 3.4.2 Mechanisms of attention 62
  - 3.5 Elaboration of the basic concepts 67
    - 3.5.1 Sensory processing 68
    - 3.5.2 Unit formation 69
    - 3.5.3 Perceptual testing 69
    - 3.5.4 Attentional selection 70
    - 3.5.5 Mediate perception 71
  - 3.6 Summary 72
- 4 Explaining divided attention by TVA 75
  - 4.1 Processing independence for objects versus features 76
    - 4.1.1 Object integrality 76
    - 4.1.2 Stochastic independence 80
  - 4.2 Whole report: number and spatial position of targets 83
    - 4.2.1 Number of targets 83
    - 4.2.2 Stimulus followed by mask 86
    - 4.2.3 Position of targets 90
  - 4.3 Detection: number and spatial position of targets 92
    - 4.3.1 Cued detection 92
    - 4.3.2 Target redundancy 96

- 4.4 Interference versus independence in the perception of simultaneous targets 99
- 4.5 Summary 101
- 5 Explaining focused attention by TVA 103
  - 5.1 Selective detection compared with whole report 104
  - 5.2 One-view search 105
    - 5.2.1 Efficient feature search 106
    - 5.2.2 One-view search with perceptual grouping 111
    - 5.2.3 Attentional capture 115
  - 5.3 Many-view search 117
    - 5.3.1 Strategies for many-view search 118
    - 5.3.2 Search reaction times 119
    - 5.3.3 Time course of attentional shifting 121
  - 5.4 Joint effects of numbers of targets and distractors 124
  - 5.5 Delay of selection cue 126
  - 5.6 Consistent practice 129
  - 5.7 Extensions 134
  - 5.8 Summary 137

## Part 2 **The neurophysiology of visual attention**

- 6 Effects of visual attention in single neurons 141
  - 6.1 Basics of single-cell behaviour 141
  - 6.2 Single-cell studies of psychological functions 143
  - 6.3 Attentional modulation of single-cell activity 144
  - 6.4 Attention as gain control 150
  - 6.5 Attention as biased competition 153
  - 6.6 Summary 154
- 7 A neural theory of visual attention (NTVA) 157
  - 7.1 Basic assumptions 158
  - 7.2 Neural interpretation of the rate equation of TVA 159
  - 7.3 Unselective and selective waves of processing 162
  - 7.4 The VSTM system 164
  - 7.5 Computational networks 166
  - 7.6 A new perspective on visual processing 176
  - 7.7 Generalization of the rate equation 178
  - 7.8 Summary 180

- 8 Explaining attentional effects in single neurons by NTVA 183
  - 8.1 Attentional effects with multiple stimuli in the receptive field 184
    - 8.1.1 Filtering by location 184
    - 8.1.2 Filtering by non-spatial categories 188
    - 8.1.3 Filtering of stimuli with different contrast 190
  - 8.2 Attentional effects with a single stimulus in the receptive field 198
    - 8.2.1 Effects with a complex stimulus 200
    - 8.2.2 Effects with a faint stimulus 214
    - 8.2.3 Effects with a relatively simple and strong stimulus 222
  - 8.3 Attentional effects on baseline firing 230
    - 8.3.1 Miller *et al.* (1993) 230
    - 8.3.2 Miller *et al.* (1996) 231
    - 8.3.3 Luck *et al.* (1997) 231
    - 8.3.4 McAdams and Maunsell (1999a) 232
    - 8.3.5 Chelazzi *et al.* (1998 versus 2001) 233
  - 8.4 Attentional effects on neural synchronization 234
    - 8.4.1 Fries *et al.* (2001) 235
    - 8.4.2 Womelsdorf *et al.* (2006) 236
  - 8.5 Summary 237

### Part 3 **The anatomy of visual attention**

- 9 Brain imaging of visual attention 241
  - 9.1 Methods of functional brain imaging 242
  - 9.2 Effects of attention in the visual system 246
  - 9.3 The source of attentional control 251
  - 9.4 Anatomical models of visual attention 254
  - 9.5 The functional anatomy of NTVA 258
  - 9.6 Summary 262
- 10 Disturbances of visual attention 265
  - 10.1 The lesion method 265
  - 10.2 Deficits in visual attention after brain damage 270
    - 10.2.1 Lateralized deficits in visual attention 270
    - 10.2.2 General (non-lateralized) deficits in visual attention 274
  - 10.3 Attention research using TMS 276
  - 10.4 Summary 278

- 11 TVA-based assessment 281
  - 11.1 The basic method 281
  - 11.2 TVA-based patient studies 283
    - 11.2.1 Specificity 283
    - 11.2.2 Sensitivity 292
    - 11.2.3 Reliability 295
    - 11.2.4 Validity 296
  - 11.3 Summary 298

## **Conclusion**

- 12 A unified theory of visual attention 303
  - 12.1 Attention in a nutshell 303
  - 12.2 Integrating fields of research 304
  - 12.3 Beyond attention: the great puzzle of human cognition 306
  - 12.4 Conclusion 308

## **Appendices**

- Appendix A Serial position curves 313
- Appendix B Attentional cost and benefit 315
- Appendix C Detection scores 317
- Appendix D Detection scores with redundant targets 321
- Appendix E Partial report with delayed selection cue 323
- References 327
- Index 355

# List of boxes

- 3.1 Selection probabilities in the four-parameter model 49
- 3.2 Selection probabilities in independent race models 51
- 3.3 Quantification of processing capacity 52
- 3.4 Selection probabilities with constant attentional weights 53
- 3.5 Exponential race models and the choice model for partial report 55
- 3.6 TVA and the biased choice model 63
- 3.7 TVA and the FIRM model 64
- 3.8 Filtering does not bias recognition 66
- 3.9 Pigeonholing does not bias selection of objects 66
- 3.10 Combined filtering and pigeonholing 68
- 4.1 Duncan (1984) 78
- 4.2 Sperling (1960) 84
- 4.3 Comparison with unlimited-capacity models 88
- 4.4 Sperling (1967) 91
- 4.5 Posner *et al.* (1978) 95
- 4.6 van der Heijden *et al.* (1983) 98
- 5.1 Treisman and Gelade (1980; feature search) 108
- 5.2 Bundesen and Pedersen (1983) 114
- 5.3 Treisman and Gelade (1980; conjunction search) 118
- 5.4 Optimal stimulus sampling in many-view search 120
- 5.5 Attention shifting between groups of elements 123
- 5.6 Schneider and Fisk (1982) 131
- 7.1 Selection of objects in NTVA 169
- 7.2 A generalized rate equation 179
- 8.1 Martinez-Trujillo and Treue (2002) 194
- 8.2 Multiplicative scaling of firing rates 201
- 8.3 Reynolds *et al.* (2000) 216
- 8.4 Williford and Maunsell (2006) 220
