

Contents

| | | |
|-----------|--|----------|
| A. | Introductory part | 2 |
| | (L. NOVER) | |
| A.1. | Historical roots and scientific scope | 2 |
| A.2. | Materials, methods and scientific terms | 3 |
| B. | Heat shock response | 5 |
| B.1. | Plant heat shock proteins and genes | 5 |
| | (K.-D. SCHARF, L. NOVER) | |
| B.1.1. | Induced HSP synthesis in microorganisms and higher plants | 5 |
| B.1.2. | Multiplicity of hs and related genes—HSP families | 13 |
| B.1.2.1. | Heat shock-dependent vs. hs-independent regulation | 13 |
| B.1.2.2. | The HSP90 family | 16 |
| B.1.2.3. | The HSP70 family | 17 |
| B.1.2.4. | The HSP60 family | 23 |
| B.1.2.5. | The HSP20 family | 26 |
| B.1.2.6. | The HSP8.5 (ubiquitin) family | 30 |
| B.2. | Control of gene expression | 30 |
| | (L. NOVER) | |
| B.2.1. | Chemical stressors inducing HSP synthesis | 30 |
| B.2.2. | Coordinate regulation of HSP synthesis | 32 |
| B.2.3. | Reprogramming of transcription | 33 |
| B.2.4. | Promoter structure and function | 33 |
| B.2.5. | Processing of pre-mRNP | 38 |
| B.2.6. | Translational control | 39 |
| B.2.6.1. | Selective synthesis, storage and degradation of mRNAs | 39 |
| B.2.6.2. | Mechanisms involved in translational control | 41 |
| B.3. | Changes of cell ultrastructure and biochemical functions related to this | 43 |
| | (D. NEUMANN, L. NOVER, K.-D. SCHARF) | |
| B.3.1. | Survey of ultrastructural changes in animal and plant cells | 43 |
| B.3.2. | The nucleolus and effects on ribosome biosynthesis | 45 |
| B.3.3. | Cytoplasmic heat shock granules | 47 |
| B.4. | Induced thermotolerance and intracellular localization of heat shock proteins | 59 |
| | (L. NOVER, D. NEUMANN, U. ZUR NIEDEN) | |
| B.4.1. | Intrinsic heat sensitivity and different states of thermotolerance | 59 |
| B.4.2. | Criteria for induced thermotolerance | 63 |

| | | |
|-----------|---|-----------|
| B.4.3. | The role of heat shock proteins | 64 |
| B.4.3.1. | Physiological and genetical evidence | 64 |
| B.4.3.2. | Methods for intracellular localization of heat shock proteins | 65 |
| B.4.3.3. | Antibodies to plant heat shock proteins | 66 |
| B.4.3.4. | Survey on the intracellular localization of plant heat shock proteins | 68 |
| B.5. | Heat shock effects on chloroplasts and mitochondria | 74 |
| | (R. WOLLGIEHN, D. NEUMANN, L. NOVER) | |
| B.5.1. | Effects on photosynthesis and gene expression in chloroplasts | 74 |
| B.5.2. | Heat shock proteins of chloroplasts and mitochondria | 75 |
| C. | Other plant stress response systems | 78 |
| C.1. | General stress response and interaction of stressors | 78 |
| | (L. NOVER) | |
| C.2. | Phytohormones and other stress modulators | 82 |
| | (B. PARTHIER) | |
| C.2.1. | Introduction | 82 |
| C.2.2. | Abscisic acid (ABA) | 82 |
| C.2.3. | Jasmonates | 84 |
| C.2.4. | Ethylene | 85 |
| C.2.5. | Cytokinins | 85 |
| C.2.6. | Brassinosteroids | 86 |
| C.2.7. | Polyamines | 86 |
| C.3. | Oxidation stress | 87 |
| | (L. NOVER) | |
| C.4. | Heavy metal stress | 88 |
| | (L. NOVER) | |
| C.5. | Anaerobic stress | 89 |
| | (L. NOVER) | |
| C.6. | Low temperature stress | 90 |
| | (L. NOVER) | |
| C.7. | Water deficiency stress | 92 |
| | (L. NOVER) | |
| C.7.1. | Introduction | 92 |
| C.7.2. | Photosynthetic activity and carbon assimilation | 92 |
| C.7.3. | Osmotic adjustment | 93 |
| C.7.4. | Desiccation stress proteins (DSPs) | 94 |
| C.8. | Starvation | 94 |
| | (L. NOVER) | |
| C.9. | Wounding stress | 95 |
| | (L. NOVER) | |
| C.9.1. | Reprogramming of gene expression | 95 |
| C.9.2. | Induced proteinase inhibitors | 96 |
| C.9.3. | Hydroxyproline-rich cell wall proteins | 96 |
| C.9.4. | Signals | 97 |
| C.10. | Biogenic stress by pathogen attack | 98 |
| | (L. NOVER) | |

| | | |
|---------|---|------------|
| C.10.1. | Complexity of the defense response systems | 98 |
| C.10.2. | Basic elements of the plant defense system | 99 |
| C.10.3. | Genes and promoters | 103 |
| C.10.4. | Signals | 103 |
| C.10.5. | Interaction between heat shock and pathogen stress | 104 |
| C.11. | Stress-induced protective effects against DNA damage (R. RIEGER) | 105 |
