Chapter 1	PHOTOSYNTHESIS	1
	The capture of light energy by living organisms	
1.1	Photosynthesis in historical context	2
1.2	Photosynthesis in a comparative context	5
Chapter 2	THE ORGANISATION OF PHOTOSYNTHETIC STRUCTURES	13
2.1	Biological membranes	13
2.1.1	Membrane lipids	16
2.1.2	Membrane proteins	18
2.2	The membranes of chloroplasts and photosynthetic bacteria	19
2.3	Pigments	24
2.3.1	Spectroscopy	24
2.3.2	Chlorophylls, phycobilins and carotenoids	25
2.4	Pigment-protein complexes	28
2.5	Antenna complexes	30
2.5.1	Chlorosomes	31
2.5.2	Phycobilisomes	31
2.5.3	The antenna of the purple bacteria	34
2.5.4	Complexes in the green plant chloroplast	35
2.6	Reaction-centre complexes	39
2.6.1	Green plants possess two types of photosystem	39
2.6.2	Purple bacteria possess the simplest reaction centre	40
2.6.3	Green plants: PSII resembles purple bacteria	42
2.6.4	Green plants: PSI—more chlorophyll attached to fewer proteins	42
2.6.5	Green sulphur bacteria	44
2.6.6	Heliobacterium chlorum	44
2.7	Summary	44
Chapter 3	PRIMARY PHOTOPHYSICS	45
	Times from 1 fs to 100 ps	
3.1	Light absorption: formation of excited states of molecules	45
3.2	Possible fates of excited states	49
3.2.1	Fluorescence	49
3.2.2	Excitation energy transfer	51
3.2.3	Radiationless deactivation	51
3.3	Antenna chlorophylls in chloroplasts	52
3.3.1	PSI	53
3.3.2	PSII	54

	3.3.3	Excitation migration	54
	3.3.4	Variables affecting the fluorescence yield	55
	3.4	Photochemical charge separation in reaction centres	55
Chapter 4		ELECTRON TRANSFER WITHIN REACTION-CENTRE COMPLEXES	61
		Times from 4 ps to 0.15 ms	
	4.1	Redox potentials	61
	4.1.1	Cytochromes	65
	4.1.2	Chlorophyll	66
	4.2	Quinones—the electron acceptors for the reaction centre of PSII in green plants and purple bacteria	67
	4.2.1	Fluorescence induction	69
	4.3	Ferredoxins—the electron acceptors in the reaction centres of green plant PSI and green sulphur bacteria	71
	4.3.1	Electron transport within PSI	71
	4.3.2	Ferredoxin is the diffusible electron acceptor	73
	4.3.3	The RC of green sulphur bacteria resembles PSI of green plants	75
	4.4	Electron donors	75
	4.4.1	Four families of C-cytochromes	75
	4.4.2	Purple bacteria	76
	4.4.3	Water is the ultimate electron donor to PSII in green plants	76
	4.4.4	Plastocyanin is the electron donor to PSI in green plants	80
	4.5	Summary	82
Chapter 5		ELECTRON TRANSPORT BY DIFFUSIBLE MOLECULES	83
		Times from 1 ms to 20 ms	
	5.1	The ubiquitous cytochrome <i>bc</i> complex: the quinol cytochrome <i>c</i> reductase	83
	5.2	Patterns of electron transport: cyclic or non-cyclic	88
	5.2.1	Purple bacteria	88
	5.2.2	Chloroplasts	90
	5.2.3	Green sulphur bacteria	91
	5.3	Summary	92
Chapter 6		THE PRODUCTION OF ATP	95
		Times from 1 s to 100 s	
	6.1	Electron transport generates an H ⁺ -ion gradient	95
	6.2	A proton gradient has both electric and pH components	99
	6.3	How much work can be stored by the proton gradient?	101
	6.4	The proton gradient drives ATP formation	102
	6.4.1	How much energy is required for ATP synthesis?	102
	6.4.2	The ATP synthase or F-ATPase	104
	6.5	The PMF controls the rate of electron transport	107
	6.6	Reverse electron transport	110
Chapter 7		METABOLIC PROCESSES AND PHYSIOLOGICAL ADJUSTMENTS	111
		Seconds to hours	
	7.1	Ferredoxin-dependent reactions	111
	7.2	Carbon dioxide fixation	115
	7.2.1	The reductive citrate cycle	115

CONTENTS

vii

7.2.2	The reductive pentose cycle	115
7.2.3	Photorespiration	123
7.2.4	C4 photosynthesis	128
7.2.5	Chloroplasts and respiration	133
7.3	Chloroplast-cytoplasm transport	133
7.3.1	The products of photosynthesis: starch and sucrose	136
7.3.2	Guard cells	139
7.3.3	Carbon dioxide accumulation	139
7.4	Molecular cell biology	140
7.4.1	Genes exist in the cell nucleus and in organelles	140
7.4.2	The control of chloroplast synthesis	143
