Peroxyacyl Nitrates (PANs): Their Physical and Chemical Properties

Jeffrey S. Gaffney, Nancy A. Marley

Center for Environmental Research
Biological, Environmental and Medical Research Division
Argonne National Laboratory, Argonne, Illinois, 60439, USA

Eric W. Prestbo

Chemistry Department
University of Washington, Seattle
Seattle, Washington, 98195, USA

Introduction	2
Discovery of Peroxyacetyl Nitrate (PAN)	3
Relationship to Ozone, Nitrogen Oxides, and Organics	5
Formation of Peroxyacyl Nitrates	5
Natural Formation in the Troposphere	5
Photochemical, Gas-Phase Synthesis	6
Liquid-Phase Synthesis	7
Physical Properties	8
Spectral Properties	8
Solubility	11
Chemical Properties and Stability	11
Photolysis	12
Chemical Reactions	12
Unimolecular Decompositions	12
Other Reported Reactions	13
Structure	16
Sampling and Analysis Methods	17
Long-Path Infrared Spectroscopy	17
Gas Chromatography with Electron Capture Detection	19
Chemiluminescent Detection	22
Chemical Methods	23
Mass Spectrometry	24
Nuclear Magnetic Resonance	24
Importance of Peroxyacyl Nitrates in the Global Troposphere	24
Nitrogen Oxide Cycle	24
Nighttime Chemistry	27

* This work was supported by the United States Department of Energy's Office of Health and Environmental Research and performed at Los Alamos National Laboratory

Non-methane Hydrocarbon Cycles	28
Relation to Peroxides, Peracids and Organic Nitrates	28
Toxicity	29
Contribution to Urban Oxidant Burden	29
Toxicity to Flora and Fauna	29
Summary and Recommendations for Future Study	30
Acknowledgements	30
References	31

Semivolatile Organic Compounds in the Atmosphere

Ronald Harkov

ENSR, Inc., 1 Executive Drive
Somerset, NJ 08873, USA

Introduction	39
SVOCs Measurement Techniques	43
Field Studies	52
Environmental Fate	57
Health Assessment	59
Future Developments	62
Conclusions	64
Abbreviations	64
References	65

Arctic Haze

Glenn E. Shaw

Geophysical Institute, University of Alaska Fairbanks
Fairbanks, AK 99775-0800, USA

M. A.K. Khalil

Oregon Graduate Center, Institute of Atmospheric Sciences
19600 NW Von Neumann Drive, Beaverton, OR 97006-1999, USA

Introduction	70
Brief History	71
Mitchell's Early Observations of Arctic Haze	71
Early Observations at Barrow, 1972–75	71
Early Chemical Studies at Barrow	72
Summary of the State of Knowledge by Late 1970s	72
Meteorological Considerations	73
The Arctic Air Mass and the Arctic Front	73
Currents of Polluted Air into the Arctic	77
Phenomenology of the Arctic Haze	80
Seasonal Variability	80
Vertical Morphology	84
Size Distribution of Arctic Haze	85
Volatility-Hygroscopicity of Haze Particulates	87
Aerosol Chemistry	88
Chemical Tracers	88
Bromine	89
Sulfate	89
Size-Dependent Chemistry of Arctic Haze	91
Light-Absorbing Carbon	91
Trace Gases and Arctic Haze	92
Optics and Radiation	99
Radiation Budget	99
Satellite Sensing	101
Deposition	102
Physics of Particle Removal in the Arctic	102
Particle Removal – Evolution Sequences for Arctic Air Pollution	103
Experimental Data on Deposition	104
Arctic-Wide Deposition	106
Additional Remarks on Wet Scavenging	106
Trends	107
Conclusion	108
Acknowledgements	108
References	109

Air Pollution and Materials Damage

Frederick W. Lipfert

Brookhaven National Laboratory
Upton, NY 11973, USA

Introduction	114
Background	115
Pollutants and Atmospheric Processes	115
Classification of Pollutants	116
Atmospheric Pollutant Delivery Processes	117
Pollutant Interactions	121
Air Concentrations	122
Other Atmospheric Factors	124
Urban Effects	126
Previous Reviews of Air Pollution Damage to Materials	126
Descriptive Studies	126
Economic Studies	128
Recent Comprehensive Technical Reviews	129
Separating Pollution-Induced Damage from Natural Weathering	131
Requirements for Damage Functions	132
Three-Step Damage Function Development	133
Air Pollution Effects on Specific Materials	138
Selection of Materials	138
Corrosion of Metals	140
General Mechanisms	140
Corrosion of Zinc	142
Copper	146
Carbon Steel	147
Aluminum	148
Other Metals	149
Major Unknown Factors – Metal Corrosion	150
Damage to Masonry	151
CaCO ₃ Damage Mechanisms	151
Theoretically-Based Calcite Damage Function	152
Measured Stone Loss Rates	153
Experimental Determination of Carbonate Stone Damage Functions	156
Damage to Concrete and Mortar	161
Conclusions and Major Unknowns Regarding Masonry Deterioration	164

Air Pollution Effects on Paints and Organic Coatings	164
Components of Paint Systems	165
Types of Damage to Paints	165
Observations of Environmental Damage to Paints	166
Major Unknowns with Respect to Environmental Damage to Paints	169
Configuration Effects	169
Boundary Layer Concepts	170
The Atmospheric Boundary Layer	170
Boundary Layers on Structures	172
Application of Boundary Layer Theory to Buildings and Structures .	175
Application of Boundary Layer Theory to Non-Buildings	176
Discussion of Boundary Layer Calculations and Results	177
Deposition with Little or No Surface Resistance	177
Deposition with Surface Resistance	178
Other Configuration Effects	178
Concluding Remarks	180
Acknowledgments	180
References	180

Air Pollution Control Equipment
