

Contents

Chapter 1

Introduction.....	1
-------------------	---

Chapter 2

Some Basic Concepts.....	5
2.1 Introduction.....	5
2.2 Units.....	5
2.3 The Environment as Compartments.....	9
2.4 Mass Balances.....	11
2.5 Eulerian and Lagrangian Coordinate Systems.....	20
2.6 Steady State and Equilibrium.....	22
2.7 Diffusive and Nondiffusive Environmental Transport Processes.....	25
2.8 Residence Times and Persistence.....	26
2.9 Real and Evaluative Environments.....	27
2.10 Summary.....	28

Chapter 3

Environmental Chemicals and Their Properties.....	29
3.1 Introduction and Data Sources.....	29
3.2 Identifying Priority Chemicals.....	31
3.3 Key Chemical Properties and Classes.....	40
3.4 Concluding Example.....	54

Chapter 4

The Nature of Environmental Media.....	55
4.1 Introduction.....	55
4.2 The Atmosphere.....	55
4.3 The Hydrosphere or Water.....	58
4.4 Bottom Sediments.....	60
4.5 Soils.....	63
4.6 Summary.....	65
4.7 Concluding Example.....	65

Chapter 5

Phase Equilibrium.....	69
5.1 Introduction.....	69
5.2 Properties of Pure Substances.....	75
5.3 Properties of Solutes in Solution.....	78
5.4 Partition Coefficients.....	83
5.5 Environmental Partition Coefficients and Z Values.....	94
5.6 Multimedia Partitioning Calculations.....	99
5.7 Level I Calculations.....	111
5.8 Concluding Examples.....	113

Chapter 6

Advection and Reactions.....	117
6.1 Introduction.....	117
6.2 Advection.....	119

6.3	Degrading Reactions	125
6.4	Combined Advection and Reaction	131
6.5	Unsteady-State Calculations	133
6.6	The Nature of Environmental Reactions.....	135
6.7	Level II Computer Calculations	141
6.8	Summary	142
6.9	Concluding Example.....	142
Chapter 7		
Intermedia Transport.....		145
7.1	Introduction.....	145
7.2	Diffusive and Nondiffusive Processes	145
7.3	Molecular Diffusion within a Phase.....	148
7.4	Turbulent or Eddy Diffusion within a Phase	153
7.5	Unsteady-State Diffusion.....	156
7.6	Diffusion in Porous Media.....	159
7.7	Diffusion between Phases: The Two-Resistance Concept.....	161
7.8	Measuring Transport D Values	167
7.9	Combining Series and Parallel D Values.....	173
7.10	Level III Calculations.....	175
7.11	Level IV Calculations	181
7.12	Concluding Examples	183
Chapter 8		
Applications of Fugacity Models.....		185
8.1	Introduction, Scope, and Strategies.....	185
8.2	Level I, II, and III Models.....	189
8.3	An Air-Water Exchange Model	191
8.4	A Surface Soil Model.....	194
8.5	A Sediment-Water Exchange Model	199
8.6	QWASI Model of Chemical Fate in a Lake.....	201
8.7	QWASI Model of Chemical Fate in Rivers	208
8.8	QWASI Multi-segment Models	210
8.9	A Fish Bioaccumulation Model	213
8.10	Sewage Treatment Plants	220
8.11	Indoor Air Models.....	221
8.12	Uptake by Plants	223
8.13	Pharmacokinetic Models	224
8.14	Human Exposure to Chemicals	226
8.15	The PBT-LRT Attributes.....	229
8.16	Global Models.....	230
8.17	Closure	232
Appendix		
Fugacity Forms		235
References and Bibliography		239
Index		257
