

# contents

**PREFACE**    **iii**

**CHAPTER 1. CHEMICAL EQUILIBRIUM**    **1**

- 1-1. The "Law of Mass Action"    3
- 1-2. An Example of Equilibrium: Hydrogen Chloride    6
- 1-3. The Effect of Temperature    9
- 1-4. A Second Example: Carbon Dioxide in Water    12
- 1-5. A Third Example: Calcium Sulfate    14
- 1-6. Le Chatelier's Rule    18
- 1-7. Stability    21
- 1-8. Conventions    22
- 1-9. A Word about Problem Solving    23

**CHAPTER 2. ACIDS AND BASES**    **28**

- 2-1. Chemical Definitions    29
- 2-2. Geologic Usage    31
- 2-3. The pH    32
- 2-4. Ionization Constants of Weak Acids    35
- 2-5. Ionization Constants of Hydroxides    40
- 2-6. Ionization Constants of Salts    43
- 2-7. Hydrolysis    44
- 2-8. Estimating Ionic Concentrations    48
- 2-9. Carbonate Equilibria    50
- 2-10. Buffers    55

**CHAPTER 3. CARBONATE SEDIMENTS**    **62**

- 3-1. Calcium Carbonate: Solubility Calculations    63
- 3-2. Calcite and Aragonite    66
- 3-3. Supersaturation    68
- 3-4. Effect of Grain Size on Solubility    69
- 3-5. The Effect of Other Electrolytes: Activity and Activity Coefficient    70
- 3-6. Ion Association: Formation of Complexes    76
- 3-7. Effect of Organisms on Solubility    77

3-8. Precipitation of $\text{CaCO}_3$ in Seawater	78
3-9. Other Simple Carbonates	81
3-10. The Dolomite Problem	85
3-11. Calcium Phosphate	88
3-12. Summary	93
<b>CHAPTER 4. CHEMICAL WEATHERING</b>	<b>98</b>
4-1. General Nature of Weathering Reactions	99
4-2. Changes in Rock Composition	100
4-3. Sequence of Mineral Alteration	104
4-4. Agents of Chemical Weathering	105
4-5. Solution and Hydration	107
4-6. Weathering of Carbonates	108
4-7. Oxidation	109
4-8. Hydrolysis of Silicates	113
4-9. Environments of Weathering	116
<b>CHAPTER 5. STRUCTURAL CHEMISTRY</b>	<b>122</b>
5-1. Structure of $\text{NaCl}$	123
5-2. Other Ionic Solids	128
5-3. Covalent Bonds	131
5-4. Electronegativity	135
5-5. General Rules about Bond Type	137
5-6. Silicate Structures	138
5-7. Isomorphism	142
5-8. Substitution	144
5-9. Polymorphism	146
<b>CHAPTER 6. COLLOIDS</b>	<b>150</b>
6-1. Definitions	151
6-2. Kinds of Colloidal Systems	152
6-3. Properties of Colloids	153
6-4. Electric Charges on Colloidal Particles	156
6-5. Ion Exchange	160
6-6. Stability of Colloids	163
6-7. Silica as a Chemical Sediment	166
6-8. Clay Minerals as Colloids	170
6-9. Geologic Evidences of Former Colloids	172

**CHAPTER 7. CLAY MINERALS AND SOILS 176**

- 7-1. Structure 177
- 7-2. Classification of Clay Minerals 184
- 7-3. Relation of Structure to Properties 186
- 7-4. Formation of the Clay Minerals 187
- 7-5. Stability of the Clay Minerals 191
- 7-6. Formation of Soils 196
- 7-7. Classification of Soils 198

**CHAPTER 8. FREE ENERGY 204**

- 8-1. Change in Enthalpy 205
- 8-2. Change in Equilibrium Constants with Temperature 208
- 8-3. Change of  $K$  with Temperature when  $\Delta H$  Is Not Constant 211
- 8-4. Enthalpy Change as a Measure of Reactivity 213
- 8-5. Free Energy: Definition 214
- 8-6. Free Energy: Conventions and Qualifications 218
- 8-7. Free Energies of Formation 218
- 8-8. Free Energy as a Criterion of Equilibrium 220
- 8-9. Relation of Free-energy Change to Equilibrium Constant 221
- 8-10. Free-energy Changes for Activities Other than Unity 223
- 8-11. Free-energy Changes at Other Temperatures 224
- 8-12. Free-energy Changes at Other Pressures 225
- 8-13. Uses and Limitations of Free-energy Calculations 226
- 8-14. Chemical Potential, Fugacity, and Activity 227

**CHAPTER 9. OXIDATION POTENTIALS AND Eh-pH DIAGRAMS 236**

- 9-1. Oxidation Potentials 237
- 9-2. Relation of Oxidation Potential to Free Energy 241
- 9-3. Redox Potentials 243
- 9-4. Limits of pH and Eh in Nature 245
- 9-5. Eh-pH Diagrams 246

**CHAPTER 10. OXIDATION AND REDUCTION IN SEDIMENTATION 258**

- 10-1. Iron Sediments 259
- 10-2. Manganese Sediments 262
- 10-3. The Separation of Manganese from Iron 266

- 10-4. Sulfur Sediments 269  
 10-5. Other Oxidation-Reduction Processes 278

**CHAPTER 11. ORGANIC MATERIAL IN SEDIMENTS 282**

- 11-1. The Chemistry of Carbon Compounds 283  
 11-2. Organic Reactions 295  
 11-3. Carbon in Rocks 298  
 11-4. Origin of Petroleum 301  
 11-5. Origin of Coal 306  
 11-6. Organic Matter in Black Shales 308  
 11-7. Carbon Compounds as Reducing Agents 311

**CHAPTER 12. EVAPORITES 318**

- 12-1. Soluble Material in Streams 319  
 12-2. Salt Deposits in Arid Regions 321  
 12-3. The Composition of Seawater 323  
 12-4. Geologic Data on Marine Evaporite Deposits 326  
 12-5. Usiglio's Experiment 331  
 12-6. Physical Chemistry of Salt Deposition 332  
 12-7. The Evaporation of Seawater 338  
 12-8. The Effect of Temperature 345  
 12-9. Postdepositional Changes in Salt Beds 346  
 12-10. Summary 349

**CHAPTER 13. THE PHASE RULE 354**

- 13-1. Formulation of the Phase Rule 356  
 13-2. The Phase Rule Applied to Salt Crystallization 362  
 13-3. Eutectics and Solid Solutions 363  
 13-4. Theoretical Crystallization Curves 368  
 13-5. Complex Binary Systems 370  
 13-6. Ternary Systems 376  
 13-7. Additional Components 381  
 13-8. Summary 384

**CHAPTER 14. CRYSTALLIZATION OF MAGMAS 388**

- 14-1. Mafic Magmas 389  
 14-2. Magmatic Differentiation 394  
 14-3. Variation Diagrams 397

- 14-4. Felsic Magmas *400*
- 14-5. Effect of Pressure on Differentiation *409*
- 14-6. Origin of Basaltic and Granitic Magmas *411*
- 14-7. Unusual Igneous Rocks *413*

#### **CHAPTER 15. END STAGES OF MAGMATIC CRYSTALLIZATION      426**

- 15-1. Kinds of Evidence Available *427*
- 15-2. Phase Relations *428*
- 15-3. The Critical Point *433*
- 15-4. Pegmatite and Aplite Dikes *443*
- 15-5. Quartz-Sulfide Vein and Replacement Deposits *446*
- 15-6. Recapitulation *449*

#### **CHAPTER 16. VOLCANIC GASES      454**

- 16-1. Relation of Volatiles to Volcanic Activity *455*
- 16-2. Gases from Fumaroles *456*
- 16-3. Equilibrium Relations in Volcanic Gases *462*
- 16-4. Sublimates *466*
- 16-5. Hot Springs *469*
- 16-6. Gases from Heated Rocks *471*
- 16-7. Summary and Speculations *472*

#### **CHAPTER 17. ORE-FORMING SOLUTIONS      478**

- 17-1. Metal Compounds in Magmatic Gases *480*
- 17-2. Hydrothermal Solutions: The Dilemma *486*
- 17-3. Hydrothermal Solutions: Geologic Data *488*
- 17-4. Hydrothermal Solutions: Possible Answers *499*
- 17-5. General Reflections *504*

#### **CHAPTER 18. OXIDATION OF ORE DEPOSITS      510**

- 18-1. Oxidation of Sulfides *511*
- 18-2. Solubilities of Oxidized Metal Compounds *514*
- 18-3. Eh-pH Diagrams for Weathering of Ore Deposits *517*
- 18-4. Supergene Sulfide Enrichment *520*
- 18-5. Oxidation of Gold *523*
- 18-6. Oxidation of Uranium Ores *526*

**CHAPTER 19. METAMORPHISM 534**

- 19-1. Conditions of Metamorphism 536  
 19-2. Classification of Metamorphic Rocks 539  
 19-3. Equilibrium Relations 540  
 19-4. Metamorphic Facies 551  
 19-5. Examples of Experimental Studies on Metamorphic Reactions 556  
 19-6. Ultrametamorphism 565  
 19-7. Metamorphic Differentiation 569

**CHAPTER 20. DISTRIBUTION OF THE ELEMENTS 574**

- 20-1. The Periodic Classification 575  
 20-2. Goldschmidt's Geochemical Classification 578  
 20-3. Distribution of Elements in Igneous Rocks 582  
 20-4. Distribution in Sedimentary Rocks 591  
 20-5. Distribution in Metamorphic Rocks 597

**CHAPTER 21. HISTORICAL GEOCHEMISTRY 600**

- 21-1. The Composition of the Earth 602  
 21-2. Origin of the Earth 606  
 21-3. Early History 609  
 21-4. Later Geochemical History of the Crust 613  
 21-5. History of the Atmosphere 616  
 21-6. History of Seawater 622  
 21-7. Some Larger Problems 625

**APPENDIXES 631**

- I Constants and numerical factors 632  
 II Symbols, atomic numbers, and atomic weights of the naturally occurring elements 634  
 III Average abundances of elements in the earth's crust, in three common rocks, and in seawater (in parts per million) 638  
 IV Ionic radii and electronegativities 642  
 V Large-scale data about the earth 646  
 VI The geologic time scale 648  
 VII Equilibrium constants 650

*Table VII-1. Solubility products 651*

*Table VII-2. Ionization constants of acids 652*

*Table VII-3. Ionization constants of hydroxides 653*

*Table VII-4. Equilibrium constants for complex ions and molecules 655*

VIII	Standard free energies, enthalpies, and entropies	656
IX	Standard electrode potentials	664
X	Balancing oxidation-reduction equations	668
XI	The thermodynamic background of geochemistry	672
XII	Answers to end-of-chapter problems	700

<b>INDEX</b>	<b>707</b>
