<i>Acknowledgements</i>	ii
<i>Preface</i>	vii
<i>Abbreviations</i>	viii
1 Organisms that fix nitrogen	1
1.1 Introduction	1
1.2 The range of nitrogen-fixing organisms	4
1.3 Cyanobacterial symbioses	15
2 Legume and non-legume nodules	30
2.1 Introduction	30
2.2 Legume-rhizobial symbioses	30
2.3 The 'classical' picture of nodule development	33
2.4 Stages of nodulation	35
2.5 Stems and nodules	54
2.6 Non-legumes (actinorhizal plants)	55
2.7 Comparisons between legume and non-legume nodules	63
3 Metabolism of nitrogen fixation	66
3.1 The basic problem	66
3.2 The nitrogenase enzyme	67
3.3 The oxygen problem	76
3.4 Ammonia assimilation	84
4 Nitrogen fixation in agriculture	93
4.1 Scope and problems	93
4.2 Legumes	93
4.3 Forage and pasture legumes	100
4.4 Grain legumes	103
4.5 Factors affecting legume nitrogen fixation in the field	108
4.6 Free-living bacteria	121
4.7 Associative symbiosis (bacteria-angiosperm)	122
4.8 Cyanobacteria	123
4.9 Non-legume symbioses	125

5 Nitrogen fixation and forestry	126
5.1 Nitrogen requirements in forests	126
5.2 Direct use of nitrogen-fixing legume species	129
5.3 Direct use of actinorhizal plants	132
5.4 Indirect use of symbiotic nitrogen-fixing plants	135
5.5 Nitrogen fixation by free-living micro-organisms in forests	142
5.6 Cyanobacteria	145
6 Nitrogen fixation in aquatic ecosystems	147
6.1 Fixation and nitrogen budgets	147
6.2 Freshwater aquatic systems	148
6.3 Saline aquatic environments	154
7 Nitrogen fixation in terrestrial ecosystems	163
7.1 Possible classifications	163
7.2 Soils	163
7.3 Some systems involving symbiotic higher plants	170
7.4 The phyllosphere	173
7.5 Three-membered symbioses	174
7.6 Colonization and pioneer associations	176
7.7 Climax situations	185
8 Evolution – and the future	189
8.1 The origins of biological fixation	189
8.2 The evolution of symbiotic systems	196
8.3 Current developments and the future	206
<i>Appendix</i>	210
