

Contents

Chapter 1	
Introduction	1
Chapter 2	
Concepts, Theory, and Models of Forest Succession	7
<i>Orie Loucks</i>	
Introduction	7
Synthesis and Summarization	8
Chapter 3	
Succession and Ecological Theory	10
<i>Robert P. McIntosh</i>	
Introduction	10
Ecosystem Succession	13
Ecosystem Evolution	16
Reduction and Emergence	18
Discussion and Questions	20
Chapter 4	
Some Causes of Variety in Patterns of Secondary Succession	24
<i>Henry S. Horn</i>	
Introduction	24
Spatial Pattern of Recruitment and Succession	26
Succession as a Tree-by-Tree Replacement Process	28
When Is Secondary Succession Convergent?	30
Succession as the Differential Expression of Life Histories	35

Chapter 5	
Causality and Succession	36
<i>Daniel B. Botkin</i>	
Introduction	36
Background to the Model	39
Verification	44
Results of the Verification: Individual Tree Growth	45
Implications for Analysis of Causality in Succession	49
Chapter 6	
The Role of Disturbance in the Gap Dynamics of a Montane Rain Forest: An Application of a Tropical Forest Succession Model	56
<i>Thomas W. Doyle</i>	
Introduction	56
Description of the FORICO Model	57
Gap Dynamics and the Role of Disturbance	71
Models and the Study of Forest Disturbance	72
Chapter 7	
Patterns and Dynamics of Forests: An Application of Simulation Models	74
<i>Herman H. Shugart, Darrell C. West, and W.R. Emanuel</i>	
Introduction	74
Model Description	75
Model Testing	78
Patterns of Compositional Dynamics Simulated by the Four Models	79
Structural Similarities in Ecosystem Dynamics	85
Compositional Dissimilarities in Ecosystem Dynamics	87
Species Roles in Ecosystem Dynamics	88
Conclusions	94
Chapter 8	
Long-Term Forest Dynamics	95
<i>Linda B. Brubaker</i>	
Introduction	95
Methods of Study	96
Implications of Results	99
Conclusions	106
Chapter 9	
Plant Succession and Soil Development in Coastal Sand Dunes of Subtropical Eastern Australia	107
<i>J. Walker, C.H. Thompson, I.F. Fergus, and B.R. Tunstall</i>	
Introduction	107
The Sand-Dune Systems of the Subtropical Coast	108
Present and Past Climates	112

Relationships between Soils, Nutrients, and Vegetation	114
Long-Term Forest Succession	126
Chapter 10	
Quaternary History and the Stability of Forest Communities	132
<i>Margaret Bryan Davis</i>	
Introduction	132
Pollen as a Record of Geographical Distribution of Trees	133
Forest Communities at the Time of the Last Glacial Maximum	137
Northward Migrations of Boreal Trees	137
Migrations of Species from the Temperate Deciduous Forest	142
Discussion	151
Chapter 11	
Simulating the Role of Climate Change and Species Immigration in Forest Succession	154
<i>Allen M. Solomon, Darrell C. West, and Jean A. Solomon</i>	
Introduction	154
Parameters for the Model	155
Comparison of Model Results and the Pollen Record	161
Vegetation Migration and Development	172
Conclusions	176
Chapter 12	
Patterns of Succession in Different Forest Ecosystems	178
<i>Grant Cottam</i>	
Introduction	178
Boreal Forest	178
Coniferous Forest	179
Tropical Forest	180
Discussion	181
Conclusions	183
Chapter 13	
Forest Succession in Relation to Nutrient Cycling in the Boreal Forest of Alaska	185
<i>Keith Van Cleve and Leslie A. Viereck</i>	
Introduction	185
Summary of Succession	187
Floodplain Succession	188
Upland White Spruce Succession	195
Upland Black Spruce Succession	200
Nutrient Cycling and Succession	206
Conclusions	210

Chapter 14	
Aspects of Succession in the Coniferous Forests of the Pacific Northwest	212
<i>Jerry F. Franklin and Miles A. Hemstrom</i>	
Introduction	212
Regional Setting	212
General Features of the Forests	213
Scale in the Pacific Northwest	216
Revised Concepts about Succession in <i>Pseudotsuga</i> Forests	218
Role of Woody Debris in Forest Succession	224
Long-Lived Seral Species in Succession Modeling	225
Conclusions	228
 Chapter 15	
Secondary Forest Succession on the North Carolina Piedmont	230
<i>Norman L. Christensen and Robert K. Peet</i>	
Introduction	230
Past Studies on the North Carolina Piedmont	232
Population Biology of Pines	234
Patterns of Hardwood Establishment	237
Vegetation-Environment Relations	240
Conclusions	244
 Chapter 16	
Successional Studies of a Rain Forest in Mexico	246
<i>Arturo Gómez-Pompa and Carlos Vázquez-Yanes</i>	
Introduction	246
Regeneration in a Tropical Forest	248
Cicatrization of the Rain Forest	250
The Role of Pioneer Species in Regeneration	256
Regeneration within the Rain Forest	264
Conclusions	266
 Chapter 17	
Process Studies in Succession	267
<i>Peter M. Vitousek and Peter S. White</i>	
Introduction	267
Nutrient Cycling in Succession	268
Disturbance Regimes	273
Disturbance and Process Studies	275
 Chapter 18	
Successional Processes: Comparisons among Biomes with Special Reference to Probable Roles of and Influences on Animals	277
<i>James A. MacMahon</i>	
Introduction	277
Justification of the Matrix Approach	278

Comparison of Successional Processes in Various Biomes: Plants	283
Animals and Succession: General	287
Summary	303
Chapter 19	
Canopy-Understory Interaction and the Internal Dynamics of Mature Hardwood and Hemlock-Hardwood Forests	305
<i>Kerry D. Woods and Robert H. Whittaker</i>	
Introduction: Stability and Perceptual Scale	305
Canopy-Understory Interaction and the Microsite Mosaic	306
Beech-Maple Reciprocal Replacement	308
Interactions among Several Species: The Hemlock-Northern Hardwood Forests	313
Summary and Conclusion	322
Chapter 20	
Changes in Biomass and Production During Secondary Forest Succession	324
<i>Robert K. Peet</i>	
Introduction	324
Theories and Published Data	325
Case Studies	330
Conclusions	337
Chapter 21	
Above-Ground Biomass Accumulation and Net Primary Production During the First 70 Years of Succession in <i>Populus grandidentata</i> Stands on Poor Sites in Northern Lower Michigan	339
<i>Arthur W. Cooper</i>	
Introduction	339
Origin of the Aspen Forest	340
Site Description and Stand Sampling	341
Biomass Accumulation and Net Production	350
Discussion	357
Chapter 22	
Below-Ground Processes in Forest Succession	361
<i>Kermit Cromack, Jr.</i>	
Introduction	361
Below-Ground Ecosystem Components and Processes	361
Vegetative Succession in Pacific Northwest Forests	364
Root and Mycorrhizal Dynamics in Forest Succession	365
Dynamics of Below-Ground Nutrients and Soil Organic Matter	367
Interactions of Below-Ground Ecosystem Components: An Integrated Example	372

Chapter 23	
Fire and Succession in the Conifer Forests of Northern North America	374
<i>Miron L. Heinselman</i>	
Introduction	374
Fire Regimes and Fire Cycles in Northern Conifer Forests	374
Organic Matter Accumulation, Permafrost, and Paludification	376
Fire Characteristics and Ecological Effects	377
Plant Strategies for Coping with Fire	380
Vegetation Change Following Fire	386
Is Lightning-Caused Fire Random or Time-Dependent?	398
Fire Patterning of Vegetation Mosaics	400
Implications for Succession Theory	401
Chapter 24	
Vegetation Change in Chaparral and Desert Communities in San Diego County, California	406
<i>Paul H. Zedler</i>	
Introduction	406
The Regional Setting	407
Vegetation Change in <i>Cupressus forbesii</i> Dominated Chaparral in San Diego County	408
Vegetation Change in <i>Larrea-Ambrosia</i> Desert	420
Discussion	424
Chapter 25	
Is Succession a Viable Concept in African Savanna Ecosystems?	431
<i>B. H. Walker</i>	
Introduction	431
Determinants of Savannas	431
Dynamics of Savannas	437
Conclusions	447
References	449
Index	505
