

# Table of contents

Introduction	1
<b>I. Mirror neurons system</b>	
<b>Past, present, and future of a discovery</b>	
The neural correlates of action understanding in non-human primates <i>Leonardo Fogassi and Vittorio Gallese</i>	13
The mirror system in humans <i>Giacomo Rizzolatti, Laila Craighero, and Luciano Fadiga</i>	37
<b>II. Further developments in the study of mirror neurons system and interpretations of its functions</b>	
Is the human brain unique? <i>Gerhard Roth</i>	63
The co-evolution of language and working memory capacity in the human brain <i>Oliver Gruber</i>	77
Episodic action memory: Characterization of the time course and neural circuitry <i>Ava J. Senkfor</i>	87
The role of objects in imitation <i>Andreas Wohlschläger and Harold Bekkering</i>	101
The mirror system and joint action <i>Günther Knoblich and Jerome Scott Jordan</i>	115
Brain activation to passive observation of grasping actions <i>Francis McGlone, Matthew Howard, and Neil Roberts</i>	125

Mirror neurons and the self construct <i>Kai Vogeley and Albert Newen</i>	135
Behavioral synchronization in human conversational interaction <i>Jennifer L. Rotondo and Steven M. Boker</i>	151
Symmetry building and symmetry breaking in synchronized movement <i>Steven M. Boker and Jennifer L. Rotondo</i>	163
 <b>III. Mirror neurons system and the evolution of brain, communication, and language</b>	
On the evolutionary origin of language <i>Charles N. Li and Jean-Marie Hombert</i>	175
Mirror neurons, vocal imitation, and the evolution of particulate speech <i>Michael Studdert-Kennedy</i>	207
Constitutive features of human dialogic interaction: Mirror neurons and what they tell us about human abilities <i>Edda Weigand</i>	229
Some features that make mirror neurons and human language faculty unique <i>Maxim I. Stamenov</i>	249
Altercentric perception by infants and adults in dialogue: Ego's virtual participation in Alter's complementary act <i>Stein Bråten</i>	273
Visual attention and self-grooming behaviors among four-month-old infants: Indirect evidence pointing to a developmental role for mirror neurons <i>Samuel W. Anderson, Marina Koulomzin, Beatrice Beebe, and Joseph Jaffe</i>	295
The role of mirror neurons in the ontogeny of speech <i>Marilyn May Vihman</i>	305
Mirror neurons' registration of biological motion: A resource for evolution of communication and cognitive/linguistic meaning <i>Loraine McCune</i>	315

---

Looking for neural answers to linguistic questions <i>Bernard H. Bichakjian</i>	323
Mirror neurons and cultural transmission <i>India Morrison</i>	333
 <b>IV. Applications</b>	
Mirror neurons and the neural basis for learning by imitation: Computational modeling <i>Aude Billard and Michael Arbib</i>	343
Mirror neurons and feedback learning <i>Steve Womble and Stefan Wermter</i>	353
A connectionist model which unifies the behavioral and the linguistic processes: Results from robot learning experiments <i>Yuuya Sugita and Jun Tani</i>	363
