<i>Preface</i>	<i>page</i> xiii
<i>Acknowledgements</i>	xvi
1 Introduction	1
1.1 Glacier forelands and simplicity	1
1.2 Ecology and primary succession	2
1.3 Space-for-time substitution (chronosequences)	5
1.4 Geoecology (landscape ecology)	6
2 The nature of the timescale	8
2.1 Glacier variations	8
2.2 Dating techniques	11
2.2.1 Historical sources	12
2.2.2 Biological dating	14
2.2.3 Physico-chemical dating	19
2.3 Terrain age sequences and areal chronologies	22
3 The physical landscape	28
3.1 The legacy of glaciation	28
3.1.1 Glacial erosion	29
3.1.2 Glacial sediments	30
3.1.3 Depositional landforms and landsystems	35
3.2 Proglacial landscape modification	39
3.2.1 Glacio-fluvial activity	40
3.2.2 Consolidation and slope stabilization	43
3.2.3 Pervection	46
3.2.4 Cryogenic processes: frost weathering	48
3.2.5 Frost-heave and frost-sorting	50
3.2.6 Solifluction and other periglacial slope processes	56

3.2.7	Nivation	58
3.2.8	Aeolian processes	59
3.3	The climatic environment	60
3.3.1	Regional climate	60
3.3.2	Meso-scale climatic gradients	63
3.3.3	Microclimate	68
3.3.4	Climatic change	72
3.4	Spatial variation and change in the physical landscape	73
3.4.1	Spatial patterns at various scales	73
3.4.2	Physical processes and landscape change	78
4	Soil development	82
4.1	Soil chronosequences and chronofunctions	82
4.1.1	Conceptual framework	82
4.1.2	An example: Glacier Bay, Alaska	86
4.2	Soil properties and pedogenic processes	91
4.2.1	Texture	91
4.2.2	Micromorphology	94
4.2.3	Organic content	96
4.2.4	pH and base status	99
4.2.5	Iron and aluminium	103
4.2.6	Chemical weathering processes	106
4.2.7	Nitrogen	110
4.2.8	Phosphorus	113
4.3	Environmental controls on pedogenesis	115
4.3.1	Parent material	115
4.3.2	Topography	118
4.3.3	Biota	121
4.3.4	Climatic controls	129
4.4	Soil formation in time and space	136
4.4.1	Soil development and equilibrium concepts	137
4.4.2	Spatial variation and soil chronosequences	140
5	Plant succession: patterns and environmental factors	145
5.1	Vegetational chronosequences: methodological considerations	145
5.1.1	Concept and limitations	145
5.1.2	Tests of chronosequences: observed successions	150

5.1.3	Tests of chronosequences: retrospective analysis	163
5.2	Inferred successional trends	167
5.2.1	Cover	168
5.2.2	Spatial organization	168
5.2.3	Stratification and physiognomy	174
5.2.4	Biomass	179
5.2.5	Species diversity	182
5.2.6	Species composition and successional stages	188
5.2.7	Population attributes and physiological traits	192
5.3	Spatial variation and successional pathways	194
5.3.1	Within-foreland patterns: mapping	194
5.3.2	Quantitative community analysis at Storbreen, Jotunheimen	201
5.3.3	Inferred successional pathways elsewhere	210
5.3.4	Between-foreland patterns: a comparative approach	220
5.4	Environmental controls on successional sequences	226
5.4.1	Initial site conditions	226
5.4.2	Environmental factors as influx variables	231
5.4.3	Environmental factor complexes	238
6	Plant succession: processes and models	250
6.1	Biological processes of colonization and succession	250
6.1.1	Migration	250
6.1.2	Ecesis	261
6.1.3	Reaction	266
6.1.4	Facilitation	270
6.1.5	Competition	276
6.1.6	Allelopathy, herbivory and pathogens	281
6.1.7	Stabilization	282
6.2	Models	287
6.2.1	Monoclimax and polyclimax	288
6.2.2	Climax pattern and site climax	290
6.2.3	Relay floristics and IFC	291
6.2.4	Non-selective and selective autosuccession	294
6.2.5	Facilitation, tolerance and inhibition	296
6.2.6	Chronic disturbance, competitive hierarchy and resource ratio	298

6.2.7	Evolutionary strategies	300
6.2.8	Vital attributes, process interactions and a causal hierarchy	302
6.3	A geocological model	307
6.3.1	Coupling of physical and biological processes	308
6.3.2	Spatio-temporal dynamics	313
7	The ecological significance of recently-deglaciated terrain	317
7.1	Chronosequences	317
7.2	The geocological approach	319
7.3	Some broader implications	323
