Table of Contents	5
Prelude	11
1. What Thomas Kuhn really says	13
1 Introduction	13
2 The main problem to be analyzed in this chapter	13
3 Kuhn has dissociated himself from the anti-quantificationists	13
4 27 basic characteristics of a paradigm, a paradigm-crisis, and a paradigm-shift	14
5 Fundamental entities	15
6 Legitimate problems and acceptable solutions	16
7 Sherwood's argument for the scientific nature of psychoanalysis	16
8 Solution of acute problems	17
9 Left-over unsolved problems	18
10 What can legitimately be and what is actually taken for granted?	18
11 Textbooks. Lay conceptions	19
12 Lack of agreement within the behavioural sciences	21
13 Competing schools	22
14 Consistent measurement	22
15 Discrepant interpretations of the same data	23
16 No trace of a crisis is observed within experimental psychology	25
17 Crisis phenomena in psychoanalysis	25
18 Marxist contradictions	27
19 Better predictions, restriction of domain, preserving of problems, attitude to predecessors	28
20 Summary of results	28
21 Other misuses of Kuhn	29
22 Kuhn's modified theory	30
Appendix to Chapter 1: Quotations Supporting the List of Principal Characteristics of Three Kuhnian Concepts	30
2. The New "Paradigm" of Harré & Secord	35
23 H & S's announced aim. The nature of philosophical analysis	35
24 Objections to experimentations	35
25 H & S do not believe in their objections. Their odd selection of illustrative experiments	36
26 Experimenter effect, individual differences, and correction of misunderstandings	36
27 Restricted information and reaction alternatives	37
28 Misuse of J.J. Gibson	38
29 Are experiments unusual within natural science?	39
30 Proposal for explorative research	40
31 Newton's "Opticks"	41
32 Faraday's "Experimental Research"	42
33 Expectations in Faraday's "Diary"	42
34 Berkeley's philosophy	43
35 Experimental psychology, psychoanalysis, and the heritage from Berkeley	46
36 Substances/qualities and Berkeley, Hume, Thomas Aquinas, Aristotle	47
37 The source of H & S's knowledge of Berkeley	48
38 The history of experimental psychology	48
39 Festinger's theory of cognitive dissonance	49
40 The status of cognitive dissonance	50
41 Cognitive dissonance in lay knowledge and in pure literature	51

42	The anthropomorphic model of man. Extension/intension and the criteria of existence	54
43	13 trivial propositions of this model	54
44	The trustworthiness of self-reports. H & S's negotiation procedure	55
45	Quod Jovi licet non bovi licet	56
46	Quantification and meaning	57
47	The asymmetric "parallel" between these concepts	58
48	Information theory and systems mathematics	58
49	Meteorology and geology as models? field theory and lay language	59
50	J.S. Mill as the source of H & S's meteorological ideal	60
51	H & S's tetrad of "new" concepts. Two of these occur in Berkeley	61
52	7 contradictory definitions of "agent"	62
53	"Power" - occult quality	62
54	Quantum physics asserts strict determinism in the macrophysical world	63
55	Random events will provide no free will	64
56	Max Weber and others on predictability and free will	64
57	H & S's tetrad of "new" concepts occurs in Aristotle	65
58	H & S's tetrad occurs in Hull	65
59	H & S's theory of schizophrenia	66
60	The phenomenology of mental syndromes	66
61	Laing's 4 theories of schizophrenia. Related writers	68
62	Critical descriptions	69
63	Physics as "natural history"	70
64	Field theory	71
65	Heinrich Hertz's methodological innovation	71
66	Homeomorph and paramorph icons	72
67	The Missal as a cause	73
68	The empirical checking procedure and criterion	73
69	The dramaturgical standpoint	74
70	Its history before Comte	74
71	Its history after Comte	76
72	Alfred Adler's central place	77
73	H & S's proposal for research on attitudes	78
74	H & S's overt aim: return to Aristotle	79
75	The asserted defects are much more prominent in H & S's proposed new methodology than in the rejected old one	79
76	H & S's many attacks presuppose the falsity of each other	79
77	H & S's covert aim: to fight the "enemies" of psychoanalysis	83
78	Persuasive tricks	84

3. Antiquantificationism as a Conservative Counter-Revolution

79	On defining the group of antiquantificationists	85
80	Never during this century were soft data methods generally rejected	85
81	The status of the argument	86
82	The origin and nature of the first stage	87
83	The origin and nature of the second stage	87
84	The origin and nature of the third stage	87
85	Their attitudes to each other	88
86	Non-scientific arguments and emotional fury	88
87	Digression on the history of music	89
88	Scarce familiarity. Johan Lindström's attack on Skinner	89
89	Skinner's and G.A. Miller's linguistic theories	90
90	Lindström's formula $APFO = NIVI$	91
91	This formula is intended as a propagandistic weapon for psychodynamics. But there is no difference between psychoanalysis and behaviourism as regards APFO	92
92	Atomism is characteristic of psychoanalysis, not of Skinner	93
93	H & S and Lindström. It does not matter for what experimental psychology is attacked	94

94	NIVI is extremely characteristic of psychoanalysis	94
95	The unbridgeable gulf	95
96	Uncomfortable results rejected as methodological artifacts	96
97	Accusations of the other side for defects that are much more prominent in one's own position	96
98	Departure from lay conceptions	96
99	Against philosophical principles	97
100	Some positions of the second stage	98
101	Antiquantificationism might be a response to behaviour therapy	98
102	Psychoanalysis and politics	99
103	Manipulation in behaviour therapy and in psychoanalysis	100
104	A hasty list of the remaining features	102
4. The Doctrine of the Substitute Problem		104
105	The main diagram. The moon analogy. A medical nonsense hypothesis	104
106	The lack of importance whether a design is experimental	105
107	Invalid studies and false accounts in Fischer & Greenberg (1977). Spontaneous remission in psychoneurotics	105
108	The impossibility of maintaining the distinction between hard and soft data	107
109	Local equivalence. The matrix of hypotheses. Background knowledge	108
110	The parasite hypothesis	108
111	Illustrative examples	109
112	A moralistic analogy	110
113	Illicit summation in Friedman (1952)	110
114	Cont:d	111
115	Unequal distribution	111
116	Evidence by classification; evidence by illicit summation; evidence by suppression; evidence by inflation of probabilities; Frenkel-Brunswik (1951)	112
117	Anal eroticism and evidence by suppression	112
118	Castration anxiety and evidence by suppression	114
119	Semi-formal definition of evidence by suppression	115
120	Whiting & Child (1953)	116
121	Re-analysis of Wh & Ch's data into a matrix	117
122	Hall's proof of the existence of the Oedipus complex	117
123	Antiquantificationism interpreted according to the main diagram	118
124	The sign relation and functional relations within natural science	119
125	Progression from lay data to higher-order data	119
126	Rapaport's conception of the relation between data and theory. Hartmann's evidence of the predictive power of psychoanalysis	120
127	The DMT-test and Natorp and Cassirer	121
128	Theoretical support of DMT	122
129	Empirical support of DMT	123
130	First methodological proposal for studying psychoanalysis	124
131	Phenomenology as a necessary first step	125
132	Second methodological proposal: the method of close reading. The basic interpretative principle of psychoanalysis. Stuttering	126
133	Overdetermination	127
134	Psychoanalytic interpretations as vulgar prejudices	129
135	Prejudices about homosexuality, feminism, mathematics	130
136	The first interpretative principle and Peirce's theory of signs. Robert Burton, Hildegard von Bingen, J.B. Pèrès	131
137	Psychoanalysts' defense of their procedure	131
138	A list of all rat interpretations in Freud's rat man case	132
139	The general character of the rat interpretations	133
140	Other contradictions in Freud's account	135
141	Was the rat man cured?	136
142	Sherwood's misrepresentation of the case	136
143	Freud's persuasive tricks. His dependence on astrology	139

144	Summary: Freud did not discover anything at all. Hence psychoanalytic experiments must fulfill 4 conditions	140
145	Further remarks on experimental tests of psychoanalytic propositions	141
146	A semi-experiment on free associations	142
147	Variants on the moon analogy. Plays on words in Karl Kraus	143
148	Numerous contradictory ways of defending psychoanalysis	144
149	Concerning certain objections to my analyses	145
150	Modern de-sexualized psychoanalysis	145
151	Psychoanalysis as guidance for behavioural research	147
	Summary	148
	Abbreviations and References	155
