List of Figures	xi
Preface and Disclaimer	xiii
Acknowledgements	xvii
1 Introduction	1
1.1 Strategic asset allocation	1
1.2 Outline of the book	5
2 Essential Elements of MATLAB	7
2.1 Introduction	7
2.2 Getting started	8
2.3 Introductory matrix algebra	12
2.4 Organising data	16
2.5 Creating functions	18
2.6 Linear regression	23
2.7 Some estimation examples	27
2.8 A brief introduction to simulations	32
3 Fixed-Income Preliminaries	39
3.1 Introduction	39
3.2 Spot rates and yields	39
3.3 Forward rates	47
3.4 Bond pricing functions	48
4 Risk and Return Measures	51
4.1 Introduction	51
4.2 Risk measures	51
4.3 Fixed-income returns	65

5	Term Structure Models	69
5.1	Introduction	69
5.2	Not necessarily arbitrage-free models	69
5.3	Arbitrage-free models	74
6	Asset Allocation	87
6.1	Introduction	87
6.2	Efficient portfolios	87
6.3	Diversification	95
6.4	The minimum variance portfolio	98
6.5	Asset weight constraints	100
6.6	The Capital Asset Pricing Model	106
7	Statistical Tools	109
7.1	Introduction	109
7.2	Vector autoregression	109
7.3	Regime-switching models	112
7.4	Yield curve models in state-space form	123
7.5	Importance sampling	129
8	Building Graphical User Interfaces	135
8.1	Introduction	135
8.2	The 'guide' development environment	135
8.3	Creating a simple GUI	138
9	Useful Formulae and Expressions	149
9.1	Introduction	149
9.2	Matrix operations	149
9.3	Decompositions	153
9.4	Basic rules	154
9.5	Distributions	156
9.6	Functions	157
9.7	Taylor series approximation	159
9.8	Interest rates, returns and portfolio statistics	159
	Bibliography	161
	Index	163

List of Figures

2.1	Example of the 'plot' command	9
2.2	Example of the 'hold on' command	10
2.3	Example of the 'subplot' command	12
2.4	Original and simulated data	35
2.5	Simulated parameter distributions	35
3.1	Yield curve examples on given dates	41
3.2	Example of yield curve's shapes and locations	42
3.3	Comparison of a zero curve and a yield curve	46
4.1	Variance and covariance	52
4.2	Risk measures	54
4.3	Empirical and normal distribution	55
4.4	Bond price sensitivity to yield levels	60
4.5	Approximations to the MD and convexity	65
5.1	Nelson–Siegel yield curve factors	70
5.2	Nelson–Siegel factor sensitivities ($\lambda = 0.08$)	71
5.3	Vasicek example yield curve	79
5.4	Upward and inverse Vasicek yield curves	81
5.5	Observed and estimated yields from a no-arbitrage model	84
6.1	Example of efficient and inefficient portfolios	88
6.2	The possible investment frontier	94
6.3	Example of the diversification effect	97
6.4	Example of an unconstrained and constrained efficient frontier	106
6.5	The capital market line	107
7.1	Example of regime-switching data	113
7.2	Data and estimated probability for state 1	122
7.3	State probabilities and the slope factor	128
7.4	Estimates of expected shortfall	132
8.1	The MATLAB 'guide' start screen	136
8.2	The GUI development area	137
8.3	The 'Property Inspector'	138
8.4	Changing the name and tag properties of a 'Push Button'	139
8.5	Nelson–Siegel GUI	140

8.6	Illustrating the usage of the first part of the Nelson–Siegel example GUI	144
8.7	Input area for the lower part of the Nelson–Siegel example GUI	144
8.8	The expanded input area	146
9.1	An example of a function and its inverse	159
